To Mark, who encouraged me to write this book.

“Discovery consists of seeing what everybody has seen and thinking what nobody has thought.”

- Albert von Szent-Györgyi

Chapter One

Chapter One: Examining the Evidence

If you don't have an open mind, you're not a scientist.

—Robert Rines

In 1948, the US Air Force launched its investigation into the UFO phenomenon. It was known as Project Sign. It was later changed to Project Grudge, and in 1953 it was changed to Project Blue Book. The Condon Project was initiated by Blue Book to continue its investigations into the UFO phenomenon. It was a thorough investigation that included data that would seem to have no relevance to the subject of unidentified flying objects.

> Over two years ago the United States Air Force commissioned the University of Colorado to make a study of the UFO phenomenon. This is the full and final report of the work carried about by the University, at a cost of about $500,000 under the direction of the eminent Dr. Edward U. Condon. (Condon Committee)

I bought my first copy of *The Scientific Study of Unidentified Flying Objects* back in 1996. Being the curator that I am, I was overjoyed to get a good hardcover copy of the masterpiece by Doctor Edward Condon. I threw it on the coffee table, and there it sat for about three weeks. I noticed that I'd look at it, but I wouldn't crack the cover. Perhaps I was afraid of what I might find when I did. It soon joined the rows of books sitting in my library collection. And there it sat for quite a long time. I used to cringe when I would listen to other authors talking about how the Condon Project was another government cover-up to hide the truth about UFOs to the general public.

Reflecting back on the significance of this book, I hadn't realized the importance of *his* scientific study of the UFO phenomena. I ventured to Boston in 1998 to do research. There I formulated the layout for this manuscript. My objective was to publish a book, using a

scientific approach to the UFO phenomenon. This preliminary study would determine the viability of a full-scale research project.

That was when I realized the importance of the Condon Committee's findings. Unfortunately, I hadn't brought my copy from Seattle. And Seattle is a long way to go for a single book. Fortunately, I was able to obtain a copy from the Copley Square Library in Boston. So having learned my lesson, I began researching Dr. Condon's work. It wasn't long before I took the challenge. I decided that a scientific objective was what I needed. After a few red herrings, I was able to find a lot of data that had been overlooked by other students of parapsychology. I admit that I was hooked. I discovered that I would devote an entire chapter to the methodology of Condon Report. If I was to document everything I had learned from my comparative analysis, I could've easily devoted an entire manuscript to their work.

What some have said was skepticism amounted to a simple and uneducated approach to a subject that would later become one of the most written-about topics in the world. When we reexamine the evidence, you'll see that there's a lot to the study about UFOs. Out of all of the case studies that I reviewed in their case report files, there were only a scant few that remained unexplained. There *were* some questionable cases that remained in the solved category, as there were a couple of aspects that the Condon Committee considered to be of a questionable nature. These were chosen to be re-examined, because in light of recent discoveries, I felt that they weren't given enough consideration. What my study of the Condon Report will reveal is that the military is very serious about UFOs, and this alone makes the Condon Report worthy of our consideration. This is proof that UFOs exist as a viable phenomenon.

I had fun with their overly pessimistic approach to some of the more factual cases. As you will see, when we re-examine the Condon Report, we will see the data. There's evidence that a highly advanced, intelligent race of beings are routinely entering our skies and flying in our airspace unchallenged by our best and deadliest arsenal of weapons. The Condon Committee offers some fresh data in the '90s and a slice of Americana from the mid-1960s.

The study of UFOs was still infantile by comparison to today's

standards. And the military was hiding some very scary secrets involving the recovery of alleged alien vehicles. These contained a propulsion unit, which looked more like a nuclear bomb than it did a power plant. These units rivaled the nuclear reactors of that era. The military was in total puzzlement over what all this meant. But there was no doubt in their minds that these UFOs posed a threat to the world's security, and they were going to set out to find exactly where they stood on this matter. Extensive "eyes only" operations were conducted in a covert manner. People died, and their secret died with them. It was the American way. Our nation was under attack by aliens… from another world.

The Psychological Effect: Neural Encoding

My sole purpose here is to show that there are people who report an observation of a UFO but, for whatever reason, hadn't seen one. Let's explore some of the reasons why it is so *easy* to misidentify an identified flying object, or IFO.

> A sensation depends on the messages arriving at higher sensory centers in the brain in combination with other events simultaneously occurring in these centers. (Michael Wertheimer, Condon Report)

Wertheimer offers up some interesting tidbits of data regarding how the mind receives information. Many authors researching UFOs focus in on the debunking tactics of government-sponsored programs, especially those that are military in nature. Perhaps they are hoping to lend credibility to the subject of UFOs. But by avoiding this data, they are giving the debunkers canon fodder. There is another problem at issue here. They may have overlooked some very pertinent data. This information could potentially give us a broader understanding of ourselves and the universe in which we live.

Knowing the complexity of the UFO phenomenon, I would have to say that its roots lie in fairy tales and legends, religious dogma, and other forms of worship, as well as a plethora of evidence to support the hypothesis that there is another dimension parallel and adjoining

ours. There is a way to get in, and there's a way to get out because the evidence suggests that. Someone or something has been doing it since the beginning of recorded time and before that also, as we shall see later on.

The brain is a mysterious organ. It's a place where the mind's state of consciousness resides. The mind is a place where dreams and reality exist side by side. The brain is a place still largely unexplored and remains the most mysterious organ in the human body. For the purpose of our present discussion, however, we need emphasize only the distal events that give rise to UFO reports that always involves the transmission of some form of energy. As we have pointed out earlier, that energy is usually in the visible spectrum (Wertheimer, ibid., page 560).

The Transmission Process

It is my hope that you find this information useful. It may provide a clearer understanding of the UFO phenomenon as a whole and aid in the handling of UFO sightings that remain unidentified. Author Marc Davenport is a trusted consultant for various UFO publications and others in the field of UFOlogy. He has entertained a popular theory about the nature of the UFO. The objects, which have been labeled flying saucers for lack of a better word, are actually very sophisticated time machines. They surround their vehicles with a field of energy, or energies, and they manipulate these energies to achieve their destinations *wherever that may be*. By allowing their spacecraft to utilize the angular velocity of the earth, they can achieve velocities at light speeds. Once you achieve light speed, you become pure energy or some form of radiation that exists above and beyond the light/speed barrier.

There is plenty of evidence to support this hypothesis. The energy field that the UFO generates has certain qualities that appear to have the ability to dopplerize various frequencies that lie within the electromagnetic spectrum. This field will dopplerize any form of energy that passes through it, including sensations such as colors that lie within the visible band of the electromagnetic spectrum, light.

> The energy is transmitted from the distal source and arrives at the sense organ, where it produces a proximal stimulus, in the form of energy change to which the sense organ is attuned. (Wertheimer, ibid.)

According to Wertheimer, what our sensory organs receive in the form of energy is not an exact copy of the energy that had originally left the distal source, the object we're experiencing. This is true for any object we're viewing (e.g., a tree, a horse in a pasture, a car, etc.). "It is attenuated and distorted, and often is an incomplete version of the original." He cites one example of this called the mirage effect, which is a product of "turbulence in the air and… peculiar temperature inhomogeneities."

What further complicates the issue is that the UFO warps the medium surrounding its hull so that the UFO you're seeing is not always a true representation of what's actually there. That visible light you are seeing is only how it exists in our world. One good example of how this would work is to check out the local carnival next time it's in town. Chances are you'll find that they have a couple of trick mirrors around. I'm talking about the ones that ripple or distort the visual image before it. The UFO has the same effect on visible light. But it does it in a different way. It generates a gravitational field. If you ask any astronomer, he can tell you how light is refracted and reflected by the gravity waves surrounding suns in other solar systems. This gravity-lensing effect also appears to exist as a component of the UFO encounter. There are specific characteristics that only a skilled investigator would recognize as evidence of a genuine UFO.

Here are other examples of distortions that can affect energy as it leaves the *distal source* in the atmosphere and reaches the sensory organs as the *proximal stimulus*:

- Meteorological: fog, mist, snow, rain, clouds, temperature layers, etc.—factors that may attenuate modify and distort the stimulus before reaching us
- Optical lenses: windshields, cameras, glasses, Plexiglas, even our own eyes

- Exhaust and/or heat sources: jet aircraft, a heated surface, an automobile, smoke and air pollution, etc.

Wertheimer states, “Frequently, the transmitted energy is so modified by the characteristics of the medium through which it has been transmitted, that the proximal stimulus is far from the exact replica of the energy that left the distal energy source.” On numerous occasions, I have had the opportunity to interview eyewitnesses who have been in close proximity to a UFO and its occupants. As I’ve revealed before, the UFO object generates a very powerful field of energy around itself. There is sufficient evidence to support the premise that the UFO pilots themselves have the ability to surround themselves with this invisible force as well. My research has shown that their UFO time machine can somehow transmit this field of force to its occupants when they are in close proximity to their craft. Some have speculated that the reason for this is that they might be slightly out of phase with our space-time continuum, therefore warping time wherever they go.

One would imagine that this might be one side effect of going in and out of our dimension frequently enough so that their point of reference is somewhat impaired. It wouldn’t necessarily matter to them if we were out of phase, because they’re generating the field. They apparently possess the ability to subject whatever matter they desire to this field and influence its activity by it. This is often the case where those in contact with the UFO were rendered immobile and unable to move. A phenomenon frequently reported by those who allege contact with extraterrestrials, this field appears to have the ability to freeze the individual for long periods of time while the intruders conduct their business and/or make their escape.

The point is, merely having a close encounter with a UFO can affect the way an observer interprets the event. The distal object is surrounded by a field that alters the energy emitted by the object to such a degree that the proximal stimulus of the observer has already been altered. “Frequently the transmitted energy is… modified by the characteristics of the medium through which it is transmitted.” (Michael

Wertheimer, Condon report “Perceptual Problems,” Section VI “The Scientific Context.”)

Right away, a contact experience event is so distorted that it is not hard to see why close encounters are not always 100 percent accurate. This can certainly work to the advantage of the ultradimensional beings. Their objectives may be to alter the perspective of the observer. They could, theoretically, alter that reality to such a degree that the psychological and physiological changes could *increase* their impact upon the observers.

And what if this field was of such a property that any energy actually emitted would be like exhaust that we get from automobile engines. Analysis of the exhaust from a modern automobile wouldn’t necessarily tell a visitor from another planet that it was a combustion engine, as the exhaust goes through a catalytic converter before being evacuated. Perhaps the energy signature of the UFO is the same way. Can we rely on physical traces from UFOs to give us an accurate picture of what is actually going on within the engine of their vehicle? Pondering this question for quite some time, I would have to say yes—and no. I have my reservations. Perhaps we need to think of the UFO’s energy signature as a form of energy that has been so altered by this gravitational field that it becomes something different, a horse of another color—“dopplerized,” as Michael Davenport would say.

Wertheimer says, “It may be difficult to tell, from the proximal stimulus alone, what the characteristics of the distal object are (Brunswich 1956)… Ambiguity occurs, for example, in size and distance estimation.” He goes on to explain that our eyes alone can easily trick us into making inaccurate size estimates, “especially in the case of UFOs.” This happens because it is difficult to tell whether the distal source emitting the radiation is “a huge, very distant object, by a medium-sized one at a moderate distance, or a smaller one close by.”

> The retinal image, and the successive changes in it, can be the same for a small, near object moving slowly as a large, distant object moving rapidly. Apparent speed depends upon relative displacement within a frame work, rather than absolute displacement across the retina. (Brown 1931)

A simple example would be this: An observer is standing along the side of an interstate freeway. He is approximately 5 feet from the road. Cars going by at 55 miles per hour would seem to be going very fast to *that* individual. But to someone in a hot-air balloon 850 feet above the earth, it would seem to be going very slow when compared to the car that was speeding in and out of traffic at 85 miles per hour!

As you can see, there are a number of different ways that any given object of study could behave in a manner different than the one that we'd be expecting. This would give rise to a number of differing opinions on what an object could be and would explain why eyewitness accounts of the same UFO object may vary so considerably. Perspective viewpoints can be interpreted in a number of different ways.

> The impulses travel through the neural network to the thalamus, and thence to the outer layer of the brain, the cerebral cortex. (Wertheimer, ibid., page 562)

Our Perception of a Distal Event

Eyesight

The state of the eye's adaptation plays a big role in our perception of a distal event. When I was at the night-fire gunnery range in the military, we were taught how the eye adapts to profound changes in light intensity. We could adjust where our rounds of ammunition were going by placing a tracer round every five to ten rounds in our M-16 ammunitions clips. But it took a period of time for our eyes to adjust to this nighttime training exercise. This varied from soldier to soldier. There we learned that even lighting a match or taking a drag off of our cigarette would attract enemy fire. It would also take a period of readjustment (ibid., 562–563).

State of Alertness

This can also profoundly affect our interpretation of a distant event as well as give "an enhanced tendency to misinterpret or distort sensations." This includes substances such as alcohol and drugs, which can further alter our perceptual clarity. High levels of anxiety,

fatigue, sleepiness, drowsiness, dizziness, physical illness can all distort what we see to the point of creating “spontaneous discharges in the sensory centers of the brain.”

Concomitant Sensory Events

Distracting stimuli—for example, loud noises, watching a TV program, or listening to a CD—could alter how we perceive stimuli. “One stimulus may actually inhibit the neural events produced by another.”

Visual Limitations of the Observer

The limitations of the observer can and will affect the perception of an event. Nearsighted persons may perceive a fuzzy blob of light while perceiving the planet Venus or Mars if not wearing corrective lenses. Color blindness will make it virtually impossible to distinguish colors and only permit the observer to see various shades of gray (ibid., page 563).

Afterimages

If you close your eyelids in a darkened room and press gently on either eyelid, even the slightest pressure will produce an explosive light effect on the eye’s neural receptors. A bright flash of light will not only render one’s night vision inoperable for a good period of time but will also leave a bright spot floating in our mind’s eye until it fades. If you’ve ever looked at the sun (which can and will blind you) and then closed your eyes as you looked away, you can appreciate this phenomenon as yellow-white discs floating around behind your eyelids. This effect will often remain for a while after the eyelids are opened, thereupon causing the blob of light afterimage to appear to be moving around freely in space. The image gradually fades until it becomes a black afterimage. “The longer the inducing stimulus was stared at, the longer the afterimage persists” (ibid., 564).

> If the perceptual framework is impoverished, as is true of most conditions under which UFOs are reported, then the perceiver must engage in much more interpretation before he arrives at a percept. (Wertheimer)

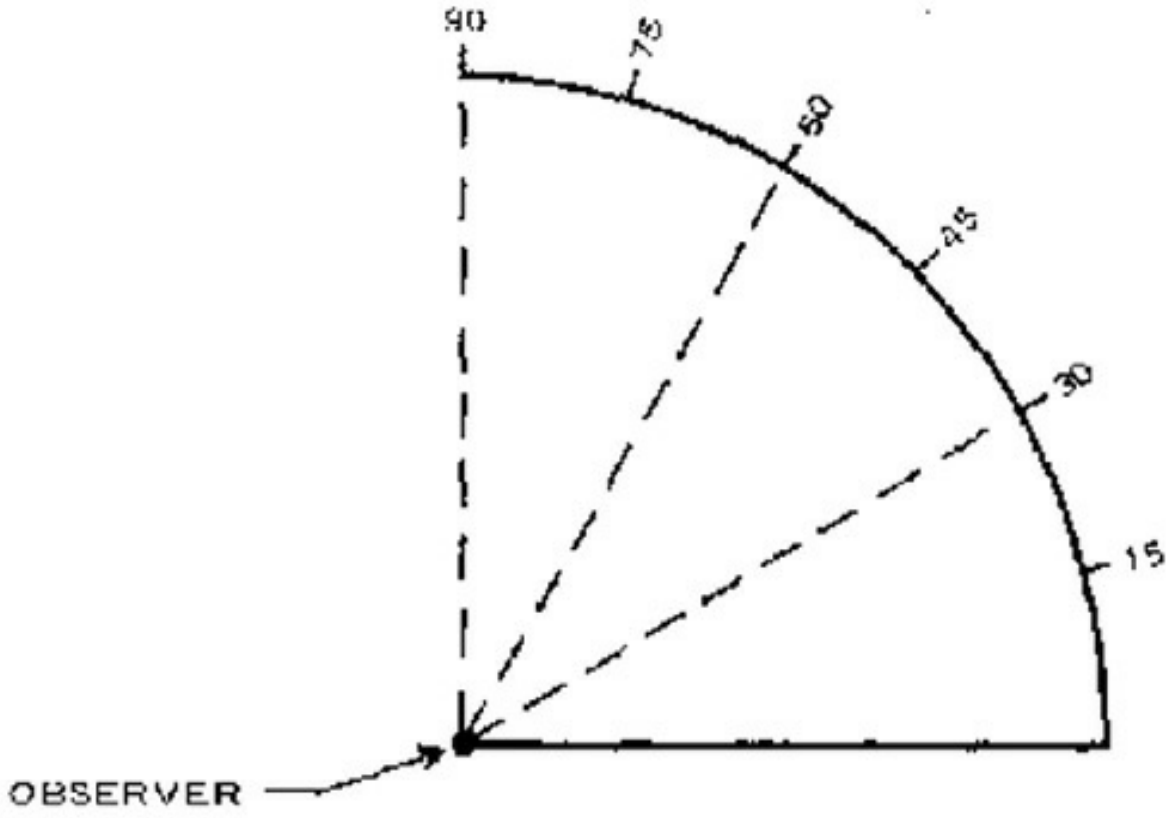
Perception

I will briefly touch on this subject presented by Wertheimer. The observation of a UFO and the interpretation of it can be “considerably clearer, less ambiguous, and less vague than the actual proximal stimulus warrants” (ibid., page 565).

When our senses receive a perception of an object, our mind is quick to analyze the incoming neural data, “assigning it particular characteristics, such as distance, direction, shape, color, etc.” The more ambiguous the distal stimuli, the longer it may take. Other distortions may occur due to the inherent physiological condition of the observer. The mind will shelve the incoming data in the memory as quickly as possible to allow room for subsequent neural input as it arrives at the sensory input.

Autokinesis

The apparent motion can be induced in an actual stationary object. Driving down the road at night can make the moon appear to be traveling along with you.



Graphic showing how investigators determine angular elevation. Image courtesy the Regents of the University of Colorado.

Angular Elevation

Misinterpretation by an observer results in inaccuracies in reports. An angular elevation of thirty degrees or forty-five degrees above the horizon is often reported as being overhead, which is actually at a ninety-degree elevation (azimuth).

Colors

The eye's adaptation to light and dark as well as object background can and will distort the observer's perception of color due to the phenomenon known as color *contrast* or color *indication*.

Cognition

A person's past experiences will shape and color the stimulus they have perceived. Wertheimer says, "The observer's personality, his rigidity absolutism, skill in scientific thinking, interest and belief in UFOs, readiness and ability to consider alternate interpretations of what is perceived, etc., substantially affect the observer's conclusions, typically his being aware of the influence" (ibid., page 566).

The UFO Report

Researchers often interview witnesses of a UFO event incorrectly. They will ask a closed question, for example, leading the witness to respond to a question incorrectly. "Was the object hovering?" is one such leading question. A better way would be an open-ended question like "Tell me exactly what you saw." Insisting upon answers from an observer whose memory is fuzzy on a particular aspect of an incident could easily result in inaccuracies from the eyewitness. It would be better to wait for a short period of time, and reask the question later.

An Evaluation

The fact is that a UFO report is the by-product of a long series of events, starting from the distal stimulus through to the final reporting; at every link in this chain lie potential sources for distortions. Wertheimer's conclusion was that the procession of data from the

distant event to the filing of the UFO report often results in UFO reports that are inadequate for *scientific investigation*.

Psychological Aspects of UFO Reporting: Establishing Observer Credibility

Observer credibility is crucial when investigating UFO reports. Walker (1968) suggests approaching the issue with “benevolent skepticism.” One needs to eliminate any and all possible errors and distortions wherever possible. Mark Rhine states that there are three broad sources of errors in reporting that are of significance to UFO research:

- Real stimuli that are misidentified
- Unreal stimuli perceived as real
- Deliberate falsifications

1) Real Stimuli That Are Misidentified

Errors often result from misidentification of real stimuli. Individual emotional characteristics play a significant role in reports that are distorted. *Perceptual defense* also plays a part, where the mind can selectively mask a memory and/or repress certain aspects of them.

> The concept of perceptual defense is used by psychologists to characterize the unconscious tendency of people to omit perceiving what they do not want to perceive. (C. W. Eriksen, Wertheimer, ibid., page 592)

Perceptual defense is used in a profound way in experiences that are too traumatic for the mind to recall. These memories are not repressed but are hidden away in the unconscious memory of the UFO contactee. Some have speculated that this phenomenon of the human psyche is responsible for the amnesia that many UFO contacts have reported. It may also account for the effect many of them call being in a *frozen* state (see “Perceptual Defense” in *Psychotherapy of Perception* by C. W. Eriksen).

This research is significant because it relates to how a person experiencing the UFO may react. When I delve into the early childhood experiences of many adults who have had contact with the occupants of the UFO, I have found that some of them recall experiences when they were young that are invariably masked (or screened experiences). Some of you may recall how we became afraid of that imaginary monster in the closet or under the bed. Or some of us had imaginary playmates when we were young. Perhaps we do not remember these, but our parents or grandparents might remember them. I am not suggesting that you have had a close encounter of the third kind. But this is one example of a real stimuli perceived as unreal.

2) Unreal Stimuli Perceived As Real

Although Rhine says that the “emotionally disturbed persons” have a greater likelihood to misjudge or misperceive than someone whom society would consider “normal,” Rhine further states that “even the most ‘normal’ individual can unwittingly distort a case report” (ibid., 592).

There are numerous ways to misidentify an experience or encounter with a UFO. One way is to perceive something as real when it is not. Rhine calls these “errors resulting from perception of unreal stimuli as real.” Such states may occur in healthy people under conditions of sensory deprivation. There are a number of examples of how this would work. I’m sure that if we examine our memory, we can recall at least one instance where this occurred. We experienced this when it was really that, and it was pure imagination. At issue here is not necessarily a lack of sleep but a lack of sensory stimulation. Rhine says, “Such states may occur in healthy people under conditions of sensory deprivation.”

Here are several examples of occupational hazards relating to a specific job task:

- A long-distance truck driver: inattention, disorientation, hallucinations, etc.
- An aircraft pilot: detachment, confusion, disorientation, etc.

- A lone sailor: imaginary helmsman
- Radar operators: serious lapses of attention

"Isolation experiments have shown the development of hallucinations in normal subjects." I'm sure that there are those amongst us that have been in a situations where a meeting was *so* boring that we fell asleep (for how long depends on the length of the meeting). You know the drill. We got plenty of sleep the night before. More than likely, this is another example of how sensory deprivation may work. We could be thrown into a situation where we would be asked to occupy a position or accept a task that will demand our rapt attention or we would suffer serious consequences. Such are the men that patrol our coastlines, man our outposts, and staff our militaries. They are always ready to put their life on the line in the name of duty.

3) Deliberate Falsifications

There will always be those who suffer from serious character pathology and will lie for their own selfish reasons. I have read of numerous examples of those who fabricate UFO stories for attention, notoriety, or even financial gain. This is an unfortunate problem but an issue that must be addressed. This will always be another element of UFO investigation. I have included the aforementioned data to enlighten those who don't have a full appreciation of how such metaphors as "temperature inversions" and "swamp gas" entered the folklore and legends surrounding UFOs.

On December 17, 1969, the Condon Committee had completed its investigation. Their findings were released to the Air Force, and a determination was "officially" made. The Air Force closed Project Blue Book. I am holding in my hands a declassified government document entitled "Fact Sheet; United States Air Force" from the "Office of Public Affairs, Wright Patterson AFB, Ohio." This report chronicled the total UFO sightings the Air Force investigated from 1947 to 1969.

Out of 12,618 UFO cases studied, a total of 701 cases remained "unidentified."

The Air Force had reached its decision based upon three critical objectives. These are as follows:

> No “UFO” reported, investigated, and evaluated by the Air Force has ever given any indication of threat to our national security.
> There has been no evidence submitted to or discovered by the Air Force that sightings categorized as “unidentified” represent technological developments or principles beyond the range of present day scientific knowledge; and
> There has been no evidence indicating that sightings categorized as “unidentified” are extraterrestrial vehicles.

There are two things that I would like to point out. The first is that the Air Force began its investigations in 1947. This is alleged to have been the year when the US Army had recovered a downed UFO near a place called Roswell, New Mexico. According to recently released documents that were produced by Whitley Strieber, the Army had launched Operation MAJIC, or MJ-12, that very same year to investigate the UFO threat. My correspondence with MJ-7 would suggest that there were fatal flaws with the documents in Whitley Strieber’s possession. You cannot create something out of nothing.

Colonel Philip J. Corso adequately substantiated this fact in *The Day after Roswel*. Other former military officers have come forward as well, including Kevin D. Randle (*A History of UFO Crashes*). This would strongly suggest that the United States government *be actively involved with* investigating UFOs.

Second, I have received reports from a reliable military source that the Air Force had continued to investigate UFOs well into the ’90s through this “ultra top secret” wing of the government. I believe it continues its investigations even today.

Chapter Two

Chapter Two: Electromagnetic Effects

One thing becomes self-evident when we read these particular case studies. The occupants of the UFOs are using evasive countermeasures to elude and evade detection; there is evidence that they are able to cloak their vehicles with various forms of radiation, which makes them undetectable. Even the shape of their craft may act as a form of stealth technology. We may assume that this indicates intelligent, deliberate manufacture and control of these vehicles. The occupants themselves must therefore be intelligent also, as they display a level of technological advancement far beyond our imagination.

The investigations are thorough, although if I were to run them myself, I would've taken things a little further, ran more tests, did more analysis, asked more questions, etc. The problem is what to ask, and in the year 1967, UFO investigation was still in its infancy. Although many of the following cases were listed as *unsolved*, the Condon Project investigators offered possible explanations. This was truly a scientific approach to the phenomenon. As I have said before, this book does contain some red herrings, but we can always use them in the garden for fertilizer.

Case Number Two: File No 7.UFONB.75755 31412.183.73

The inherent problem with UFO investigations is that hard data is likely to be unavailable, and it is this hard evidence that we seek to solve the UFO mystery. Therefore, we will have to look at the evidence that *is* available. This is what I call *soft data*. These are some of the tools in our toolbox. Soft evidence may take the form of physical effects left by the UFO on the environment. A UFO landing site is one such example of where the public will often have access. Within many genuine UFO landing sites, including crop circles, are traces of radioactive particles remaining in the environment. Often, the

soil will be disturbed and altered. Many photographs can be included in this group. With new advances in computer technology, photographic analysis can be done quickly and professionally. I believe that definitive proof can be ascertained from analysis of these UFO photographs. As you will see, the Condon Project will substantiate this.

What follows is Condon Project case no. 2. It is based upon a letter received by the Condon Committee. (See *The Scientific Study of Unidentified Flying Objects*, ibid., pages 248–256.)

Date: the summer of 1956.
Location: GCA-A, B radar units.
Observers: RAF, USAF ground crew, pilots, and staff.

As for case report no. 2, what makes this case of interest is the fact that radar lock-on had been achieved by a Royal Air Force pilot. He had been scrambled to intercept an unidentified object on the ground crew's radar screens. The apparent speed and maneuverability of the bogie had the ground crew and staff quite excited. It demonstrated the capability to fly at *absolute velocities*, which was something that no one on earth was able to do.

> The target made several changes in location, always in a straight line, always at about 600 mph and always from a standing or stationary point to his next stop at constant speed—no build up in speed at all. These changes in location varied from 8 miles to 20 miles in length. No set pattern at any time. Time spent stationary between movements also varied from 3–4 minutes to 5–6 minutes (possibly even longer). (USAF staff member, ibid., page 249–250)

Right angle turns were also reported. A ground radar lock of thirty-five to forty-five minutes "had been reported before two RAF Interceptors were scrambled, using CPS-5 type radar." One interceptor achieved visual confirmation on one of the stationary objects, and he reported, "I got my guns locked on him." At that instant, the pilot asked, "Where did it go?" It was at that time that the

ground radar had reported that the UFO had taken up a position behind the interceptor aircraft. From what I can gather, the “bogie” took up the chase after the interceptor had passed directly over the glowing sphere. Now what is really odd is that the pilot said that he had gotten a lock on the target. His next comment was that the object had disappeared. Then it was directly behind his jet aircraft. The UFO occupants had apparently detected that the RAF pilot had his gun lock systems focused on their vessel, and they initiated evasive maneuvers.

To move from a position directly ahead of you to a position behind you in a split second is physically impossible. But what the pilot saw verified that there was indeed something in the skies. The UFO displayed impossible aerial maneuvers. This object was one of several that night that had been tracked on the ground *and* in the air.

Had their radar systems been tricked by some type of radar anomaly? Perhaps. But when the pilot of a RAF Viper Interceptor made a visual confirmation of the UFO, it becomes quite clear that we are dealing with something tangibly real interacting within our dimensional time and space. Transcripts between the pilot and the ground crews will confirm this.

Location: Sikhote, Alin (near Vladivostok), USSR.

Observer: a lineman working on telephone/electric wires.

Object behavior: The object was identified as a “bolide.” Its activity indicated “strong electromagnetic effects.” This was attributed to the “strong electric shock received by a lineman *from wires, which had been disconnected*” (emphasis mine, ibid., page 745).

Not unlike the UFO, the meteor trail is visible as a material column of dust by day. At night, it clearly gives off radiation of a visible spectra, where color changes are profound. The fireball trail is especially visible at night, easily identified as a luminous, glowing column. And if apparent magnitude of −13 or greater is achieved, the meteorite will generate audible frequencies as well. There is obviously a lot of energy being generated. By comparison, the UFO is the same way. During the day, it becomes visible as an object with physical properties. But at night, the UFO becomes visible as a glowing object

that generates a measurable luminosity. One reason for this may be the intensity of the illumination. I give you one example of how this principle may work. Have you ever turned on a sixty-watt light bulb in a room filled with sunlight? The light emissions from the bulb are no match for the powerful rays of the sun, and therefore, it blends into the sunlight. But as sunset approaches, the light bulb may seem to get brighter.

Ionization of the air surrounding UFOs may be occurring, not unlike the process involved with bolides. There are, however, distinct differences between a UFO and a meteorite. The ionization of the UFO doesn't generate a discernible tail as a comet or meteor does. Many UFO sightings, although very brief, far outlast the duration of a shooting star.

The bolide emits "low-frequency electromagnetic radiation," which registers in the human ear. These frequencies would be perceived differently, depending upon one's range of hearing. A hearing range with an audio capacity of "good above 5kHz" is required, according to Altschuler. There is one problem, and that is that audible frequencies are not considered part of the electromagnetic spectrum. If this is true, then there must be another agency by which bolide frequencies are imparted to the listener. Altschuler proposes that bolide sounds would have to be transmitted to the hearer by way of "a peak electromagnetic radiation flux of 4 watt/meter square," which is believed to be "pulse modulated." When background noise reaches approximately ninety decibels or greater, it has been shown that earplugs were of some benefit to hearing these pulse-modulated EM signatures. Although not identified by Altschuler, I believe that this would imply that another agency is at work. These meteor sounds could register as an audible vibration by way of the bone *surrounding* the ear (ibid., page 745).

I theorize that a UFO can ionize the envelope of air around itself. To ionize a field around an object, certain specific characteristics would have to be present. Heat, electrical energy, and atomic collisions (in the form of atomic and molecular annihilations) would have to occur, along with recombinant avalanche processes. To produce this effect isn't easy, and scientists can only produce this phenomenon in a

closed system. The neon tube is one example of how this principle has been utilized. It glows as a result of the ionization of the gas inside the tube, which is subjected to an electrical discharge. An ionization chamber is another example of employing the ionization principle. But when we consider *surrounding* an object with this form of coronal discharge, as the UFO seems to have the ability to do, it becomes a formidable task. When we examine the physiological aspects of this UFO project, we shall see that this is evidently the case.

Let us presume for a moment that the UFO is an object that has a surface that can activate an ionization process while inducing other effects on the environment. It is these other effects on the environment that would lead me to theorize that there are other types of electromagnetic radiation being emitted by these objects—not only heat or electrical energy, but nuclear as well. There would *have* to be other processes involved. There would *have* to be some field surrounding the object to bottle the ionized air. I propose that a gravity field is what contains this radiant field of coronal energy.

I investigated a UFO sighting that was an alleged meteor, which I believe was actually a misidentified UFO back in 1997. I entitled this case “The Meteor That Wasn’t.”

Case No. 3: File No. UFONB.41551 50012.85.57

Date: January 8, 1997.

Location: near Pasco, Washington.

Abstract: Our story begins in Seattle, Washington, on the morning of January 8, 1997. The local newscasters on KIRO channel 7 and later on KOMO channel 4 ran a story about an alleged “meteor” that “glowed” and was the size of an automobile. It had reportedly splashed down in the Columbia River, near Pasco, Washington. I was unable to get specifics on the time and location from the local newspapers, including the *Seattle Times* and the *Seattle Post Intelligencer* on January 8—this despite the fact that the story ran all day on the TV channels 4 and 7, though not on channel 5 KING. Then on Friday, January 9, the story was omitted from all local broadcasts and newspapers. “Why?” you may ask. I probed further.

I was a bit dismayed and suspected a cover-up, so I decided to call the papers. When I called the *Seattle Times*, no one had heard anything about this story. I asked for the editor's desk. He didn't even hear about the meteor "the size of a car" and would look into it. I then called the *Post Intelligencer*, also in Seattle. I was transferred to the newsroom. A woman answered the telephone, "News desk." I asked her about the meteor story. She said that the story had run under "News Briefs." With this edition of the paper in front of me, she talked me to the spot where it should be. The article wasn't there in my copy of the paper. After talking to another reporter, I discovered that the story wasn't printed because there simply "wasn't enough room." It had run in the northern Washington edition of the *PI*, however. But this was a long, long way from Pasco and the Columbia River.

I pressed her for details, explaining to her the reason for my interest. She said that the object had come down around Pasco, Washington, but she suggested that "the object was small" and that "it wasn't tracked on radar." I mentioned that eyewitnesses had described the object as being "the size of a car." She countered with "The object was never found." I hung up the telephone.

"Had someone hunted for the object?" I asked myself. Were divers dispatched to look for it? That would certainly be the only way they could locate the object, which would be quite a novelty for a collector. This is a perfect example of how an object can be misidentified. Stating that the object was not spotted on radar was not a satisfactory explanation, but for an ignorant reporter that knows nothing about meteors or radar, this would suffice.

For the sake of scientific review and analysis, one must consider the effect of the UFO on the environment. How these vehicles interact in our space-time continuum can give us clues as to how they operate, including their propulsion systems. I remember that during the eighties, everyone was searching for the ultimate frictionless engine. But that in and of itself is an oxymoron. A true engine, in a conventional sense, will always produce friction.

Let us consider that we can produce an engine without any moving parts. It would not be frictionless per se. Wear and tear on the constituent parts of this engine would encounter some heat stress for

sure. I am talking about utilizing the atom as our engine to “tickle the dragon’s tail,” as the developers of the atomic bomb would say. Trick the atom into working for us to achieve what we need.

Atomic energy is still a very misunderstood science. It appears that the UFO vehicle has learned how to utilize the atom as its power source. It also utilizes nuclear reactions as its fuel. This became clearly evident when I began investigating the effects of the UFO on the environment. As I will demonstrate.

Let us examine the UFO and its effects on the environment.

John Keel wrote, “The many cases of skin burn and conjunctivitis following night time UFO sightings give absolute proof that UV waves are radiating from some of the objects.” Keel is one of the associate editors of the magazine I write for. (*UFO Universe; Uncensored UFO Reports*). I have the highest respect for him as an author and UFO investigator. In my most recent article, they took the picture of the Reed photo and published it in black and white. They also darkened the photo slightly. There, for all to behold, was a radiance that became visible in this daytime photo. “Many UFO witnesses have complained of feeling oppressive waves of heat, even when the objects seemed to be many yards away” (Keel, John “Operation Trojan Horse: The Classic Breakthrough study of UFOs,” page 55, 1970 G.P. Putnam & Sons, New York, NY).

“The general consensus,” Keel said, “has been that UFOs utilize an antigravity device which surrounds them with a magnetic field, and this magnetism ionizes the nitrogen in the air causing it to glow.” Keel suggests that the objects are made of electromagnetic energy because “Witnesses are observing frequency changes rather than ionization.” Keel goes on to say that gamma radiation is one of the “energy constituent(s) of the objects,” and is not from a mechanical process (John Keel, ibid page 63).

Chapter Three

Chapter Three: The Comet Theory

So what makes a UFO unidentified? An event of this nature receives such a title when it can no longer be explained as something, which one can identify. The following information was gleaned from the Condon Project's research. It involves certain objects that are commonly misidentified as UFOs. This includes the Tunguska, USSR, explosion of 1908 (Condon, ibid., page 559).

The Ionization Effect

A meteor is thought to spawn from asteroids in orbit. Many comets orbit around our sun, and periodically spin off dust and ice particles of sufficient mass as they course through our galaxy. Many of them follow the orbit of the comet. These pieces of space debris often find their way into our atmosphere when they get drawn into the Earth's gravitational pull, which extends thousands of miles beyond our planet. This is called the magnetosphere.

Meteor showers are most frequent during certain times of the year, when the earth's orbit nears that of a comet or asteroid belt. That is the time when meteor showers are the most frequent. When an ice particle enters our planet's atmosphere, it is called a comet. When a solid fragment streaks to earth, it is called a meteor, or *bolide*. Scientists have theorized that life on earth may have originated from small pieces of organic material arriving here from a comet or meteor. What I call the theory of *spontaneous evogenesis* postulates that life on our planet began in this way.

As these particles enter our atmosphere, they become what are often called shooting stars. These fireballs are a result of the ionization effect. Shooting stars are often misidentified as UFOs. The number of UFO cases increase during periods of high meteor and comet activity. Meteors account for a large majority of UFO sightings,

more so than comets. This is due to the spectacular display that the meteor, or bolide, gives off.

A bolide is a solid object that derives its meaning from the word *bolis*, which is Greek for “missile.” These account for any meteorite that will reach the ground before burning up. Its luminosity will equal or exceed that of the brightest planet in the night sky, with an apparent magnitude of −5. Therefore, L = m/−5. Bolides, or meteors, are believed to originate from the asteroid belt and not from the tail of a comet. Meteors will be the focus of our study.

When a bolide enters the earth’s envelope of gravity, it sends out a shock wave ahead of itself. Intense heating of the meteor and the surrounding air begins. Atoms on the surface of the object get very excited as they boil off the meteor’s surface. These atoms are said to move at a velocity of one kilometer per second, presented by this formula: V = 1 km/sec. It has been said that some of these atoms can reach a directed velocity of up to 72 kilometers per second, which is represented in this formula: V = 72 km/sec. These atoms collide with molecules in the air around the bolide, and ionization begins. The meteor is now surrounded by ionized gas, which gives it a glowing luminescence.

> Ionization (*n*) 1. The formation of one or more ions by the additions of electrons to or the removal of electrons from an electrically neutral atomic or molecular configuration by **heat**, **electrical discharge, radiation, or chemical reaction** [emphasis mine]. 2. The state or condition of being ionized. (*The American Heritage Dictionary*)

The fireball produces a tail, which is known as a meteor train. It is believed that a mutual particle annihilation and recombination process gives the meteorite its tail. Sometimes particles break off during the meteor’s ionization as it streaks toward earth. This can produce additional missiles. Some of them fly off, while others will continue on the same course as the parent object, flying in formation. Vivid color changes in the ionized sheath are commonly reported. You can see why meteoroids are often mistaken for UFOs flying singly or groups of

two or more objects. The reverse is true also, where UFOs are dismissed as being meteorites when this is clearly *not* the case. There are numerous parallels between meteorites and UFOs. This will be explored in greater detail later on in this chapter.

Most meteorites burn up before ever reaching the earth. The ones that are found have unique characteristics, which make their identification so much easier. There is evidence of intense heating and melting on the surface of the bolide. Often, the object will make an impact crater. You can see this effect if we look at the surface of the moon. While the meteoroid is still hot, it will emit radioactive signatures, as the atoms on its surface are still very excited. Analysis of radiation emission lines given off by the bolide will give a composition signature of iron, sodium, magnesium, and other compounds. The composition of materials in these objects can be found on the earth and other asteroids. Meteors are often found intact. The smell of sulfur has been reported.

Here are some other characteristics of the meteorite:

- Meteor trails are visible at between 110- and 70-kilometer altitudes.
- The ionized sheath of gas may extend “some tens of meters in diameter.”
- The brightest bolide can cast shadows over a radius of 650 kilometers.
- A bolide with a mass of 100 kilograms is required to generate luminosity equal to that of the moon.
- It is estimated that 1,500 meteoroids enter the earth’s atmosphere annually, with an average mass of 100 kilograms or greater.

There are a number of events that coincide with the occurrence of some meteorites. One phenomenon that has been reported is that the meteor appears to produce sonic vibrations in the form of audible sound. Here are some sounds that a meteoroid fireball can make: hissing, buzzing, whizzing, swishing, crackling, whirring.

These sonic phenomena are attributed to meteors that have luminosity, equal to that of the full moon, which has an apparent magnitude of −13. Therefore, this occurs when M = (L) / m −13. When this audio phenomenon was first studied, it was thought that it was the mind's way of associating a sound with a familiar event. The premise that meteors can generate audible sound was refuted. Scientists realized that this was indeed the case. Altschuler says, "Meteor sounds are now regarded as physical effects. On several occasions the observer first heard the noise and then looked upward to seek the cause. (Similar noise has also been reported during times of aurora activity)" (Altschuler, ibid., page 745).

As we can see, the behavioral quality of the fireball is very similar to effects caused by the UFO. Many of these are without explanation. For example, a UFO at ground level could not be a meteor. Altschuler says that in order for coronal discharge effects to occur in a case like this, "the bolide would have to separate many thousands (or even tens of thousands) of coulombs about 30 km. along its ionization trail. Such a process seems unlikely" (ibid., page 745).

The average bolide weighs in at one gram or less. This makes the meteor too small to register on radar. Yet ground radar systems can detect comets and meteors. The reason for this, scientists theorize, is because "radar echoes will be produced by regions of high ionization where there is an appreciable density of charges." This would include lightning as well, because the lightning path is ionized.

> Radar analysis of meteor trails indicates a radar image life of approximately 0.5 seconds on any sweep. The meteor train can last longer than radar images would indicate, however. (Ibid., page 788)
>
> Spectral analysis of glowing meteor trails reveals many bright emission lines from excited air atoms… These emission lines reveal only common elements… implying a chemical composition similar to the earth and to the asteroids. (Roy H. Blackmer Jr., ibid., page 682)

The meteorite particle is usually very small. Meteors large enough to survive re-entry are very infrequent. These are known to produce spectacular fireballs. Radar can only detect the ionized trail that it produces, however. The exception would be search radar, which has a broad bandwidth of frequency radiation. Even these radar echoes are short-lived, lasting only seconds at R = 120 mi and V = 20,000 mph. This explains why meteors are so hard to detect on radar.

> Visible meteors vary in size from about 1 gm. to 1 u gm. The ionized trail produced by a 0.1 gm. Meteor is miles long and a few feet in diameter. The meteor particle itself is far too small to be detected… Because of the small cross-section of the trail meteor ionization can be detected by radar only when the trail is orientated at right angles to the radar beam. (Roy H. Blackmer, Jr.)

Plasma Theories

In his “Plasma Theories for UFOs,” Altschuler explores this as another plausible explanation for the UFO mystery. He dredges up an easy explanation for the great UFO flap in Exeter, New Hampshire, which was popularized by Raymond Fowler in his book *Incident at Exeter*. He does not refer to Ray Fowler but rather makes his area of focus on Phillip Klass. He has presented a theory that the UFOs seen by hundreds of witnesses in Exeter were actually plasma fields that have been misidentified. Altschuler agrees that there are some similarities between the UFO object and coronal discharge affects.

“Klass points out that ball lightning and the Exeter UFOs compare favorably with regard to color, shape, sound dynamics, lifetime and size… the diameter of those reports ranged from the size of a basketball to 60-meters.

“Klass argues that plasma blobs would have the same characteristics and would cause the same effects as those occasionally attributed to UFOs, including the abrupt (sometimes explosive) disappearances, maneuvers near aircraft, rapid accelerations, stalled automobiles, heat, prickling sensations, irritated eyes etc.”

This chapter does have some redeeming qualities, as one of the UFOs that were actually unidentified had led physicists to conclude that the object of question was “not a plasma or an electrical luminosity by the atmosphere.” Plasma physicists felt that containment of plasma within some form of magnetic field was “not likely under atmospheric conditions for more than a second or two.”

One “participant” of the Condon think tank listed the characteristics one would expect to generate and/or accompany large plasma:

- Thermal emission
- Production of ozone and odor of sulfur
- Convective air motions
- Electric and acoustic noise
- Unusual meteorological conditions

Incidentally, these are all characteristics of the classic UFO scenario. This clearly fits *my* data base. The UFO is generating an ionization field around itself, probably inducing some form of gravity field to contain it. An interesting aspect of the Condon Committee’s findings was that the energy signatures coming off bolides and other ionized objects would also include the coronal discharge effect.

Traces of gamma radiation will exceed normal background levels at UFO landing sites. This is the hallmark of a genuine UFO encounter. The Condon Project never makes an issue of this, although the analysis done during their UFO investigations will reveal elevated gamma radiation. It seems to be an underlying theme in many reports garnered from field investigators. When the Air Force concluded their Project Bluebook, they had come to the same conclusion. I would speculate that when the Air Force hired the University of Colorado to investigate UFO encounters, they also told them what they were looking for. Altschuler says that at the point where “matter and anti-matter come into contact, they annihilate each other and produce gamma rays, Kaons and Pions.” In the case of antimatter touching atmospheric molecules, an avalanche process would occur, whereby “negative pions would be produced.” This particle interaction would produce neutrons, which is a by-product of gamma radiation. This

neutron avalanche, it is theorized, would produce C-14, carbon (ibid., pages 746–747).

The coronal discharge effect is produced by bolide meteorites but also high-points on the landscape and on sailing vessels (St. Elmo's fire). There is also an airglow layer surrounding the Earth, which rotates within this ionized field. A group calling itself the Plasma UFO Conference was assembled to review the atmospheric electricity data. They came up with another piece of data regarding the UFO phenomenon.

> Another plasma physicist noted that a plasma explanation of certain UFO reports would require an energy density large enough to cause an explosive decay. Atmospheric physicists, however, remarked that several reports of ball lightning do indicate unusually high energy densities. (Altschuler, ibid., page 750)

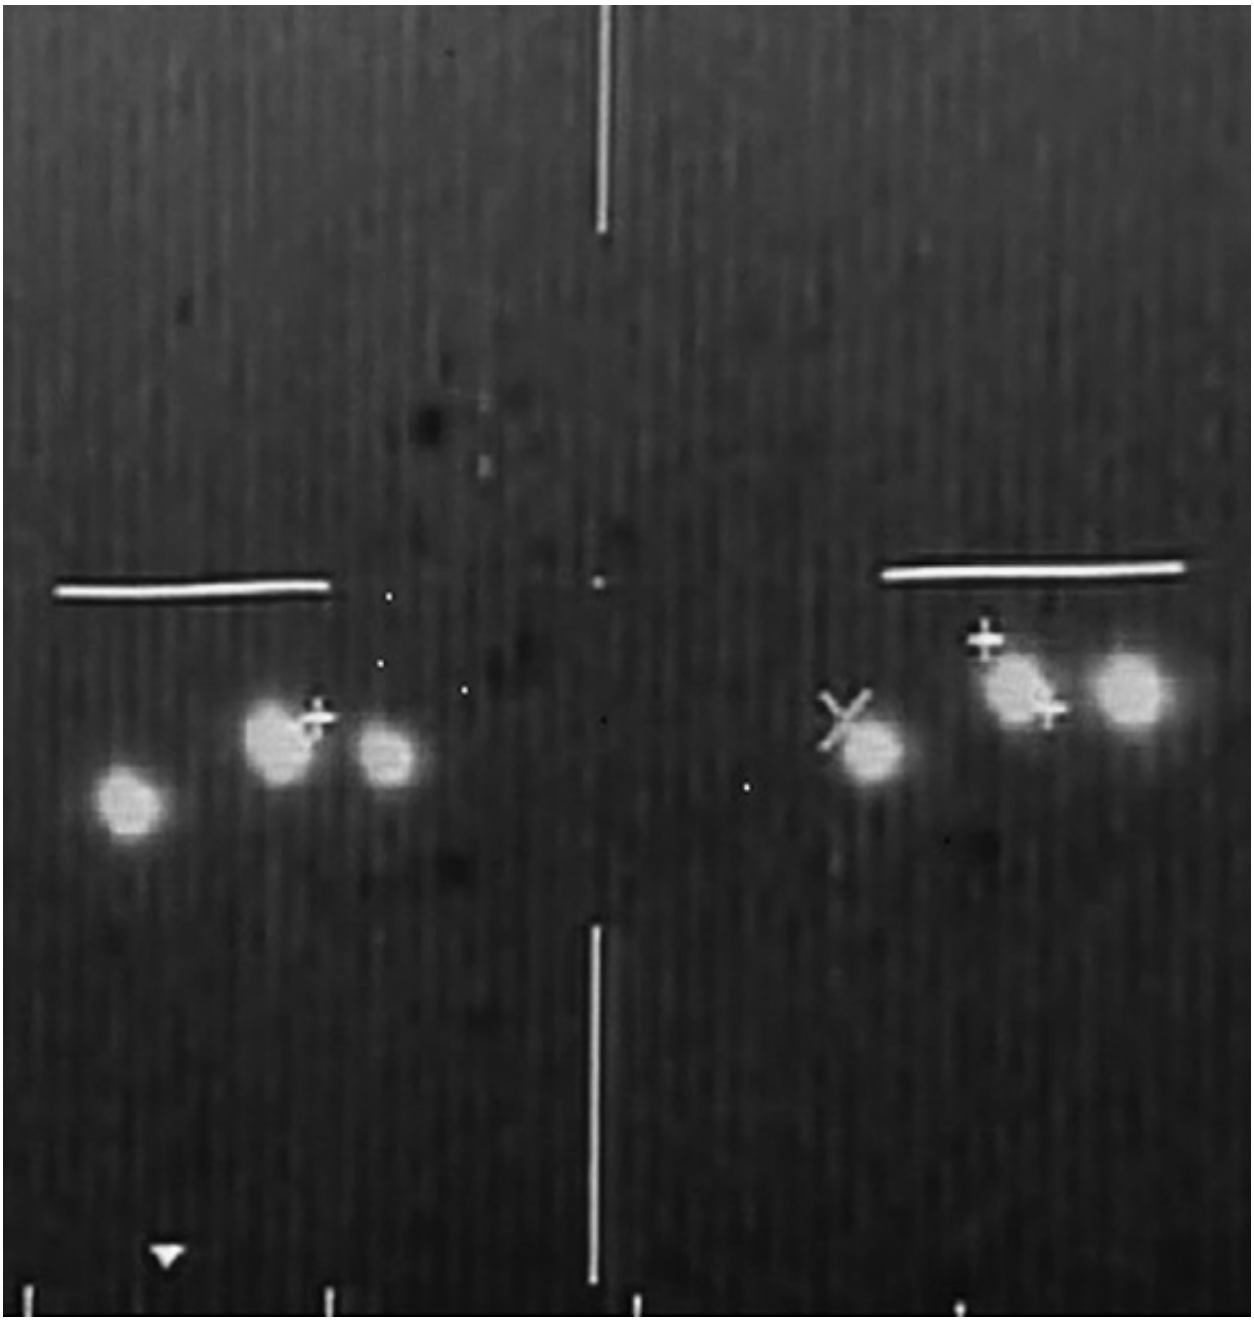
In *Confrontations: A Scientist's Search for Alien Contact*, author Jacques Vallee discusses luminosity characteristics of certain UFOs. Utilizing the same principles that the Condon Project had, he assigned luminosity values, which gave an estimate on the power generation capabilities of the UFO. One unidentified in particular had generated enough electrical energy to equal that of a small nuclear reactor, in the range of 2.5 megawatts! More in the chapter entitled "Physiological Effects."

> One expected physical effect is noteworthy because of its absence… the UFOs [are] seen, visually or on radar, to be moving at presumed speeds far exceeding the speed of sound. (Roy Craig, the Condon Committee)

Craig goes on to say that any material object moving through the atmosphere at such speeds would necessarily create a pressure wave in the atmosphere, resulting in a sonic boom. Now I know this, as do other UFO investigators. But you may not. I have a theory that may explain this phenomenon. The UFO is an object that does not move through time and space in a conventional manner, such as you or I

would in, let’s say, an automobile. They generate a field of energy around themselves, negating the effect and limitations of gravity. They can direct this field to one side of their craft or another. If the pilots of these craft desired to go across the United States, they wouldn’t fly there by any means of propulsion but would rather pull that destination to them. They essentially pull themselves to the spot they want to get to, which is just the opposite of how we would think of travel. But it isn’t as mysterious as it sounds.

But the Condon Committee concluded that if a sonic boom wasn’t present, then it was impossible and therefore, a hoax. To use this as evidence that refutes the existence of UFOs is preposterous, given the amount of data I’m sure was available at that time of American history back in 1968. A retired lieutenant colonel by the name of Corso has been publishing information that the government’s been studying alien technology since the recovery of crashed discs back in 1947. If this is true, could Dr. Condon have been persuaded to discredit UFOs as part of a clandestine operation to silence this highly classified matter? I believe so.



Military pilots routinely lock-on to unknown aerial objects in our skies, like the ones in this photograph.

So does Lt. Col. Phillip J. Corso, and he says so in his book *The Day after Roswell*. I believe that *the Condon Committee* was just another way for the US government to suppress the truth about UFOs, while they back-engineered the technology that they gleaned from their craft. Having the eyes of the American public reading your reports and findings was another matter. Therefore, you had to

present the evidence in a forthright and convincing manner while maintaining the integrity if your mission—to discredit UFOs and anyone who claims to see them. But this is camp UFO lore, befitting for that time in human history. Many UFO investigators see the Condon Report as a direct frontal attack on UFO investigation. I see that it is so full of red herrings, that it is humorous. I really get a kick out of reading it. I suppose for someone who doesn't have a really good handle on the field of UFO research, it may seem like a frontal attack. On the other hand, they may not comprehend that this *is* the case. The Condon Report became my ally, my friend. I studied their investigative techniques. I learned from its pages. I became convinced that there's something behind all the science that surrounds the UFO enigma.

Tunguska, USSR, 1908

In "Micrometeorites of Anti-matter," the Condon Committee reexamines a well-documented case that originated in Tunguska, USSR, in 1908. Altschuler identifies the object that caused an explosion that rivals a nuclear device as a bolide, or meteor. Proponents of the extraterrestrial vehicle hypothesis have debated this for years, and it remains one of the greatest unsolved UFO cases to date.

The object remains unidentified, because there is too much empirical evidence to suggest that a micrometeorite would not be capable of this magnitude of destructive force. Most of the data Altschuler offers has already been published innumerable times, and I don't feel that I will present that. He does offer luminosity characteristics that are of some value, and I will give this documentation as an adjunct to the energy generation capabilities of the UFO. The explosion of this object gave the radiance of a thermonuclear detonation. "The energy released by the Tunguska bolide is estimated between 10 to the 16th power joules and 10 to the 17th power joules," according to Altschuler. This is the energy range of a hydrogen bomb (ibid., page 746)!

A joule is “a unit of energy, equal to the work done when 1 ampere is passed through a resistance of 1 ohm for 1 second” (*The American Heritage Dictionary of the English Language*).

What is truly incredible is that this object had qualities that parallel those of a meteorite streaking through our atmosphere. But that is where the similarities end. Altschuler vacillates when he writes: “At present, measurements made during meteor events (of the dust ball variety) give no indication of significant radio emission.” Magnetic effects, he says, are insignificant. Yet the Tunguska event had all of these qualities. The explosion in Tunguska was a fact. It was measured at Irkutsk Magnetic and Meteorological Observatory on a seismograph.

Intelligent Control

One issue that Altschuler fails to address is that this alleged “comet” changed course several times before the explosion. He fails to address the eyewitness accounts that describe a cigar-shaped object that seemed to alter its course several times, apparently to direct it away from populated areas. This would indicate some form of deliberate, intelligent control. He does not touch upon the extraterrestrial control hypothesis but seems to avoid this issue entirely. He is aware that the object created an air burst that is estimated to have occurred, by whatever means, three kilometers *above* the ground. When scientists went to the site several years later, it was discovered that the force of the blast came from above. The blast pattern forced trees below into a fan-shaped pattern. This would suggest that the energy from the explosion went *ahead* of the object. Other peculiar evidence was found at the site, including rare earth elements, such as germanium, a by-product of the explosion. This is not a common element found in meteors but is used in electronic applications. The area where the explosion occurred was *devoid* of an impact crater, a characteristic of a bolide, not this particular object.

He does theorize that the blast was the cause of a particle of antimatter coming into contact with a particle of matter. There is no evidence to support this theory of nuclear volatility between matter

and antimatter. Altschuler wrote that scientists who had visited the site near the Tunguska River had concluded, “The Tunguska meteor was probably not composed of anti-matter.” My theory will show that matter and antimatter are in a constant state of interaction. (I will present my electrogravitational hypothesis later in another book). The comet theory, he says, was his “best guess.”

Ionization of the atmosphere had occurred during and after the explosion, which was seen by many eyewitnesses. It was compared to the brightness of the sun. The visibility range of this effect was estimated to be between seventy and one hundred kilometers in diameter *surrounding the air burst*. Strange that “luminous clouds” turned night into day for some. The observatory at Irkutsk reported this effect, as did “Europe and western Siberia… the nature of these luminous clouds is still a matter of debate” (ibid., pages 746–748).

At the epicenter of the blast cone, many trees remained standing.

The concussion generated by the blast was heard as far as one thousand kilometers away.

Barometric waves circled the globe.

Magnetic disturbances were reported on several continents.

A blast effect was very similar to a nuclear explosion, including intense heat, extreme force, and a radioactive cloud.

Trees remained upright at the epicenter. Trees showed evidence of intense charring on the blast side, whereas the shadow side of the trunk was not too terribly affected.

The blast energy was estimated at ten to the twenty-eighth ergs, a unit of energy. That is ten with twenty-eight zeros after it.

This event made the front page of the *Daily Express* newspaper in England. The blast occurred on June 30, 1908, at 7:00 a.m. Not knowing what caused this unusual event, the newspaper published a story entitled “Weird Effects of the Tropical Weather; Tennis at 10 PM; Blazing Sunshine and Many Deaths.” An article published by the *Times* of London states, “The extraordinary occurrence of night trains running over the Grampion hills without lights took place for the first time on record.” A reader wrote: “I myself was aroused from sleep at 1:15 AM and so strong was the light at this hour that I could read a book by it in my chamber quite comfortably. At 1:45 the whole sky, N

and NE was a vibrant salmon pink, and the birds began their matutinal song."

Photographs had been taken that showed an eerie light coming from the area of Tunguska, USSR. This strange cloud didn't dissipate like a nuclear device would. "What people mistook for the Aurora Borealis lit up the entire east-coast."

The Royal Meteorological Society had recorded an extreme shock in southern England at 5:00 a.m. and reported evidence that an "air blast" had traveled "twice around the world." This was more evidence that it was not a comet nor a bolide for that matter. Even if it had been an experimental atomic bomb detonation, the effects of this mysterious event would still rival those in use today.

The Kulik Expeditions

Leonid Kulik led the first expedition to the epicenter of the Tunguska UFO event in March of 1927. The terrain and conditions were so severe that they had to return for a second try in April of 1928, about one year later.

This second expedition led by Kulik was now better equipped to tackle the extreme obstacles that they would encounter. The expedition and their supplies took the train across Siberia on the Trans-Siberian Railway. Arriving in Tayshet, they left the railway and headed up the Angara River with only their supplies, pack animals, and a few river boats. Traversing the Taiga was made more difficult by the winter thaw.

When they arrived at Vanavara, Mongols greeted them at the trading post. They still had vivid memories of the Tunguska explosion twenty years later. The locals were mostly trappers and fur traders, and they knew the area well. They agreed to act as guides for the next leg of their journey despite the fact that the locals still viewed this area with terror (A. C. Clarke's *Mysterious World* television documentary).

There is a legend among locals that a cigar-shaped object had been seen heading west toward the blast zone. It had changed course several times before it finally exploded over this remote area that is called Tunguska. In *UFO Chronicles of the Soviet Union*, Vallee

writes: “Some people saw it move from west to east, but it seemed to reverse its course just before impact… That seems to suggest a purposeful maneuver, I pointed out, remembering that a Professor Zigel had used this argument in his lectures” (Vallee, page 72).

Baxter and Atkins write that an object had “carried out a maneuver” at the time of the impact. The object was described as “an artificial flying craft from some other planet.” Furthermore, the authors point out that “any sizable object, such as a spacecraft, acquires a luminous plasma coating that causes it to glow like a meteor with a brilliant white-hot radiance.” This “remarkable cylindrical object” had caused an “elliptically-shaped atomic blast in 1908” (Atkins and Baxter, op. cit., page 128).

Chumbay, Upper Tunguska River

As the expedition neared the blast zone, they began to catch a glimpse of the vast area of devastation. The thick Siberian taiga had been flattened. The trees were toppled for as far as the eye could see. New trees, silent sentinels to the event, had begun to grow up among the devastation. They team had to fight their way through 60 miles of flattened forest and tangled growth, which took many days (A. C. Clarke, op. cit.).

The expedition had discovered that nearly some as yet unknown force had flattened one thousand square miles of the taiga forest. It wasn’t until many years later that they would learn that the blast pattern was in a fan shape. This would suggest that an airburst had occurred nearly five miles above the earth as well as the dispersion of the blast energy wave upon detonation. Vallee says that there was a standing forest at the epicenter. He documents some important statistics concerning the force and energy of the blast in *UFO Chronicles of the Soviet Union*.

The Siberian Swamp

The team of explorers found a swamp in the heart of the blast zone. The swamp was drained. But they did not find an impact crater, only more tree stumps that still remained remarkably intact.

This data clearly refutes the comet/meteor theory. There was absolutely no evidence of a meteor impact. My research has not produced any conclusive evidence to support the comet/bolide theory. Yet this remains the most popular theory among mechanistic science today. Just because something doesn't fly with the status quo, doesn't mean it isn't so. You can't create something out of nothing.

> The Tunguska explosion took place in the air. There exists only two possibilities for such an explosion. Either it came from an internal energy source in the body, or the natural energy by its movement. I believe it was a nuclear explosion from an artificially made object. There is certainly some new type of radiation here. The explosion of a cosmic body has produced this new type of radiation field on the ground, at the center of the blast. (Alexis Zolotov, Soviet academician)

The Taiga Forest

Kulik died in the battle of Moscow. It wasn't until many years later that a third expeditionary team was dispatched from Moscow. Their efforts produced substantial information to add to the database. "Several mutated species of insects" were found near ground zero. They selected trees that somehow survived the mysterious explosions. They'd found a "dramatic increase in growth after 1908." This effect also appeared in Hiroshima and Nagasaki (AC Clarke's *Mysterious World* television documentary).

Vallee documents some important statistics concerning the force and energy of the blast. Vallee writes that there was a standing forest at the epicenter, very much like the aftereffect of the Hiroshima/Nagasaki A-bomb blast. The Russians had suspected that there had been an airburst, estimated to be five meters in the air. The Russians did experiments to try to determine which type of blast would generate this type of fan-shaped pattern at ground zero, Tunguska. Their simulation produced results that were nearly identical to those found in Tunguska's taiga forest. This served to only deepen the mystery (Vallee, *UFO Chronicles of the Soviet Union*, page 62–73).

> Right up to the present time we have been investigating certain geophysical and biological affects, which are not observed when normal meteorites fall. In particular, the genetic pattern has been violated. These violation has been seen in certain species in plants and in particular in pine trees. (Nikolai Basilio, A. C. Clarke's *Mysterious World*, op. cit.)

Small glass-like globules were also found. They contained material that could be found in outer space but also here on Earth. Such materials could suggest a possible link to the comet hypothesis. They include silica, hydrocarbons, some methane, and rare earth germanium used in electronics. In their book *The Fire Came By*, John Baxter and Thomas Atkins had written about these mysterious artifacts:

> Later Soviet expedition discovered in the Tunguska soil thousands of tiny magnetite globules formed by the heat of the explosion. These magnetized iron oxide spheres, perhaps of extraterrestrial origin, were believed by some analysts to be the only remaining fragments of the cosmic object that caused the blast.
>
> Also found in the Tunguska soil were numerous globules of silicate in small, glassy droplets or bulbs. In some instances, a particle of iron was found inside a silicate globule: the tremendous heat of the explosion had caused them to coalesce, like the congealed particles of trinitite found in 1945 at the atomic site at Alamagordo, New Mexico. Many scientists were convinced that the particles imbedded in the Tunguska soil did not come from any know natural cosmic body. (*The Fire Came By*)

Vallee asked Zolotov, "Is there any way to establish the exact speed?"

Zolotov replied, "The velocity must be in the range of three to eighteen miles per second… What we observe is destruction caused

by the conversion of kinetic energy, which is measured by mass multiplied by the square of the speed, into light and thermal energy."

From Zolotov's calculations, the speed had to be "about three miles per second, over 10,000 miles per hour." The effect of a bolide of such mass and speed would form a crater sixty miles wide. One example of this would be the meteor crater in the Canyon Diablo in Arizona. Yet a crater was never found. This suggests that whatever hit Tunguska was *not* a meteor (Vallee, op. cit.).

Carl Sagan and others have suggested the comet theory. Vallee says that the comet theory does not explain the sixty miles of destruction. Furthermore, the comet would have left significant, telltale traces of its existence, which were never recovered after dozens of visits to the site. The average speed of comets that have been studied would suggest that the level of destruction documented at Tunguska was greater than what any comet could create.

> We don't see how the speed of the comet at the time of impact could have exceeded a few miles per second, and that is insufficient to provide the energy figures. Furthermore, the comet would have left tell-tale traces, metals minerals, even if was primarily composed of ice, which would have melted away. (Martine [Vallee, ibid.])

The antimatter theory is interesting but doesn't work. The explosion would have had to happen when the black hole hit the upper atmosphere, where a significant amount of matter could impact the pocket of antimatter. Therefore, the evidence suggests that this was clearly *not* the case. Why do scientists embrace these empty theories when the evidence strongly suggests that the object was an extraterrestrial spacecraft?

The trajectory of any object travelling at such speeds must be very precise. If the UFO had entered the atmosphere at too shallow an angle, it would have bounced off the atmosphere like a stone can be made to skip over water. If the angle were to sharp, it would have burned up upon reentry. This also indicates intelligent control of the object. "To make a successful entry through the dense air blanket

surrounding our planet, a spacecraft must maintain a precise flight angle of minus 6.2 degrees to the horizon” (Baxter and Atkins, op. cit., page 128).

My calculations of the electromagnetic spectrum indicate that matter and antimatter are in a constant state of mutual particle interaction. It is the black to the white, the yin to the yang, and the negative to the positive. Science has not advanced to the point where they can grasp this concept. If only they would pull their hands out of the pocket of government funding projects, perhaps then they could finally be free to explore the world of science as the pioneers they should be.

Chapter Four

Chapter Four: UFOs, God, and the Devil

An extremely popular theory postulated by those who study UFOs is the theory that UFOs have a direct link to Semitic and Judeo-Christian texts. Most suppose that the occupants are in some way related to the supernatural forces spoken of as having angelic and/or demonic qualities. The latter, that UFO is demonic, is currently the most popular theory in use today.

Most authors who write about the UFO phenomenon from a religious standpoint, do so with the premise that all UFOs and their occupants are demonic in origin. My evidence disputes this, and I will show that if we view the UFO phenomenon from a religious angle, these encounters will fall into two *distinctly different* categories. They are listed as category 1 and category 2.

Brief descriptions of these are as follows:

- Demonic: otherworldly beings, which have absolutely *no direct link* to UFO sightings. In many cases, they will claim affiliation with the UFO phenomenon and will go so far as to stage events that would seem to indicate a direct correlation. They have every capability as those entities listed in number 2 except for access to a UFO device and its related hardware.
- Angelic: occupants of UFOs that have been seen interacting within our reality. These claim no affiliation whatsoever yet seem to have a *hidden* agenda. They have the same capabilities as number 1 except they *can be* directly linked to UFO events.

Theory

I theorize that the occupants of the UFOs are angelic in origin and conduct their business according to instructions given to them by God.

The word for *angel* in Greek is *aggelos*, which, loosely translated, means “messenger.” These carry out the will of God, and their duties include keeping the demons in check. Their nature is good, and their intent is pure. They acknowledge the deity of Jesus Christ.

I further speculate that beings that have no direct correlation to UFOs are demonic in origin. The word in the Greek language for *demon* is *daimon*, which means “a supernatural spirit of a bad nature… [or] devil.” These are in a campaign of deception, and their sole purpose is to sidetrack God’s purpose and plan for mankind. They will claim that Jesus was a great man and teacher, often comparing him to others like Mohammed and Buddha. They will deny his authority and position as the Son of the living God.

When we view the UFO phenomenon from this perspective, all the data checks out and dovetails together nicely. In theory, as well as practical application, it reveals another aspect of the UFO paradigm hitherto unexplored as of this writing:

- Entities encountered that are a direct result of a UFO event
- Entities encountered that *are not* a direct result of a UFO event

There’s a fuzzy area between the two, where there may or may not be a UFO sighting directly related to a UFO event. Still, UFOs have been seen at some point during the contactee’s lifetime.

One observation that I have made regarding those who are plagued by demons is that there is a consistent thread that runs throughout these case studies. That is that there appears to be a direct link to the occult at some point in their lives.

The *connection* between UFOs and demonic activity is very ambiguous. Not a direct link have I made in my many years of researching the subject. I believe that one of the problems that most Christian publications have is that they make the assumption that the occupants of the UFO are evil by nature. That is a bit presumptuous, to say the least. This is probably due to how eyewitnesses and contactees interpret their experiences.

And in fact if we look to Bob Larson's *New Book of Cults*, we can see that this is the case. Although Larson appears to want to believe in his heart that UFOs have an angelic origin, he states that they're likely demonic.

> Inferences can be drawn from the nature of such visitations. The occurrences of poltergeist phenomenon and the terror brought upon observers are indications of a demonic visitation. When God intervenes supernaturally, it is to bring comfort and peace, unless there is a clear reason for his wrath to be exhibited… While neither God nor Satan can be positively identified as the source, the latter seems a far more likely culprit. Since it appears likely that neither human agencies nor extraterrestrial creatures are the source of the UFOs, we are left to consider whether they are of a supernatural origin. (Bob Larson, ibid., page 434)

Larson does well to make the connections between UFOs and the supernatural. And although he doesn't come out and directly say it, he infers that he is going to err to the conservative and say that if they can't be grouped into one category, he'll lump them into another. This is unfortunate, because if the conservative right is actually wrong about this, they may be farther out on a limb than they want to admit. The stark reality is that UFOs are not demonic in origin. This is made quite clear when we go to my resource the Holy Bible.

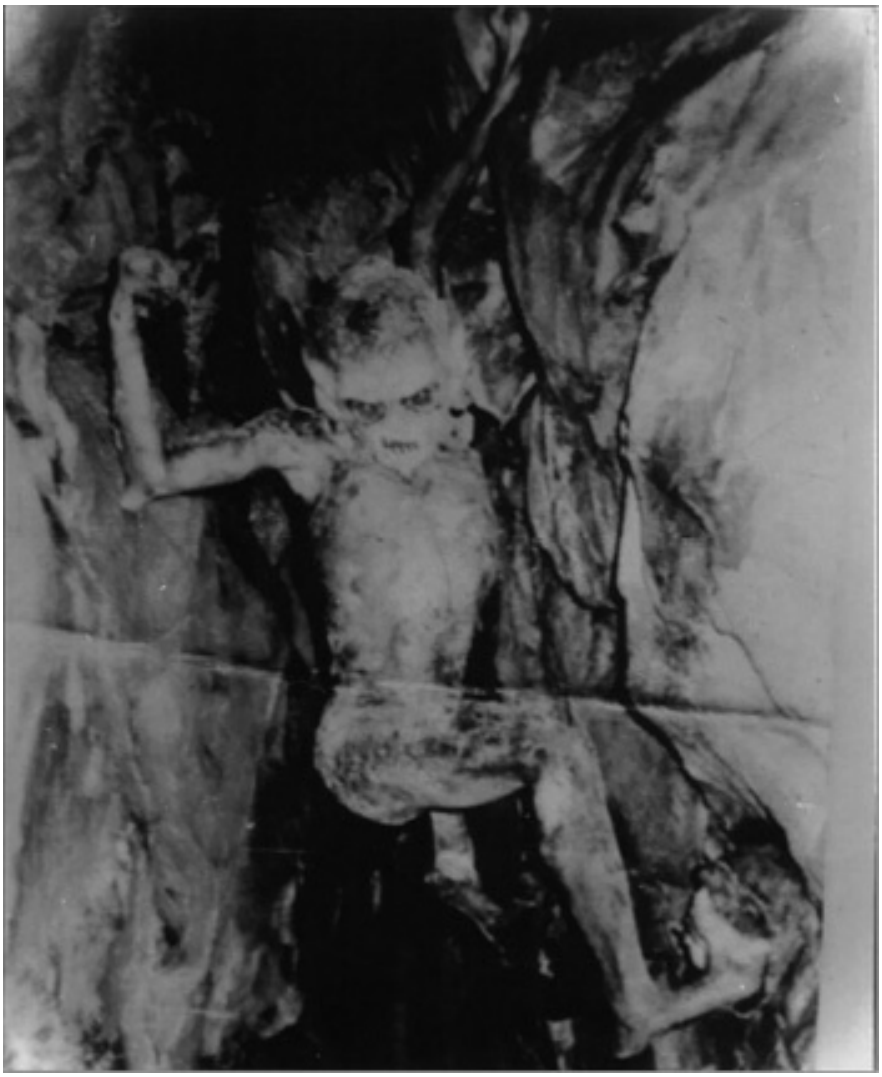
Robert Achzennes is a UFO expert who has given lectures on the subject of the UFO phenomenon. This author has expressed his opinion on the supernatural origin of UFOs and has said, "I have come to these conclusions. The unknown objects and their manifestations are real; they are intelligently controlled; and no government authority or scientific agency knows what they are, where they come from, or why they are here."

Although Larson's book does add some information to the UFO database, he doesn't seem to add anything new. It seems that he, like many other authors who cover the UFO/religion paradigm, are singing the same tune. This phenomenon is nothing new, as he's jumped on

the “UFO occupants may be angels (but probably not)” bandwagon. You don’t even have to crack the cover of Wimbish’s book to get a clear indication of where he’s at on this subject. For those of you who don’t know, the front cover art depicts a rendering of an extraterrestrial taking off a mask, revealing its *real* identity: a frightening creature that has all the characteristics of a demon!

Dr. Clifford Wilson, PhD, is another author who takes a jab at the subject of UFOs. Once again, you don’t even have to crack the cover of his book entitled *Alien Agenda* to get a glimpse of what’s going on inside. Referring to the synopsis on the back cover, his book reveals “startling new evidence about the present danger threatening the earth and its inhabitant, this fascinating book reveals the horrifying plan of action on… *ALIEN AGENDA*.”

I will show that the misinformed are the uninformed. My aim and goal is to present the evidence as it is. Misconceptions abound concerning the UFO phenomenon. Whenever possible, I will eliminate those. Part of being a good UFO researcher is having the ability to ascertain the truthfulness of a particular subject. This is not always easy, especially when we have to go back into the historical record. This is probably where most of the misconceptions lie due in part to the way that history is recorded. One of the best ways that I have found to do this is to research the very core of truth, where the best evidence will be found. One of the best places that I have found to do this is the Holy Bible, where the interaction between God and man is chronicled in a truthful and forthright manner.



This image was sent to author by a secret contact. The demon-like creature bears a striking resemblance to an alien allegedly recovered from a UFO in Varginhas.

Compare this artist's sketch of the Varginhas alien on the cover of UFO Magazine, Brazil to the previous image of a demon-like creature.

Leonard Stringfield wrote me a note on the title page of one of his publications. It is entitled "UFO Crash/Retrievals: Amassing the Evidence, Status Report III." It says, "Hoping we can find the truth in this enigma someday." And that's really what the subject of UFOs is all about—a mystery wrapped in an enigma. Sir Arthur Conan Doyle put it this way: "When you have eliminated the impossible, whatever remains, however improbable, must be the truth." But the truth makes for a strange bedfellow. For some, it is easier to stick it in the closet or sweep it under a rug. But I tell you: throw open that closet and pull

back the rug. What has been hidden must not be concealed. For we are only fooling ourselves if we think we can ignore a phenomenon that demands our close attention! You can do *your* part by carefully examining the evidence I present. Then you must draw your own conclusions.

Common Biblical Distortions

Heaven

Heaven, in the Greek and Hebrew texts, has numerous meanings and applications, depending largely on how it is used. The use of this word can be misleading. I will show that it is a source of numerous misinterpretations by Bible scholars. This is often the case when they do not verify the origin and meaning of the word. It is then taken out of context with applications that fit their theories and speculations. This produces unnecessary confusion, which could have been easily illuminated had the author taken the time to research the origin and meaning of the text.

Heaven can refer to a place or, by extension, an area *above* the earth, such as the sky. It can refer to an area in the clouds or celestial bodies in space. The word *heaven* can refer to a realm, as in another dimension of reality. It is the context of how the word is used that imparts the meaning. “And I will give wonders in the *heavens* above.” Here, *ouranos* is used, indicating the sky; by extension, heaven; by implication, an area above the ground. The appearance of UFOs may be a sign in the “heavens.” This, given the fact that hundreds of UFO sightings are made every year, which may be further evidence that God is very real, even a dynamic power and presence still active in our world every day.

Angels

One common distortion by biblical scholars is the distinction between *fallen* angels and God’s *heavenly* angels. The origin of the two camps is always inferred along with the word used for *angel*. In Greek, it is *angelos* (pr. *an-gel-os*). In Hebrew, it is *malak* (pr. *mal-awk’*).

I will give you an example of how this works. In the New Testament, the book of Ephesians, chapter 2 verse 2, Satan is called the prince and power of the air. This is often used as proof that he operates the UFO. This is false. In this translation, the Greek word for *air* is *aer* (pr. *ah-ayr*). It is in reference to the human breath as, by implication, the spiritual state of a person. This, like many other biblical distortions, has misidentified the UFO as a vehicle for the demon hordes. Most Bible scholars tend to agree on this. They misquote the word for *air* as meaning the *sky* and use it as evidence that *UFOs are satanic* in origin.

The Bible texts clearly indicate that the devil, the leader of the fallen angels, is grounded. He is not granted the same freedom as God's heavenly or elect angels, for obvious reasons. The devil, as a prisoner, is a consistent theme that runs throughout the Old and New Testaments of the Bible. He does not fly in a UFO as God's elect angels do for *obvious* reasons. The best analogy would be that he is a prisoner on this planet.

I believe that the Book of Revelations, chapter 12 verse 7, explains why. This illustrates the distinction between good and bad angels.

> And war occurred in Heaven, Michael and his angels making war against the dragon. And the dragon and his angels made war, but they did not have strength, nor was place yet found *for* them in Heaven. (Revelation 12:7)

The *Times of London* published an article entitled "Defense Chief Warns of 'Satanic UFOs' by Ruth Gledhill, reporting on an organization called UFO Concern. The organization is warning that UFO experiences are satanic in origin.

Rev. Paul Inglesby heads the group and cites numerous case studies that indicate that this UFOs are of the devil. The group has the full support of admiral of the fleet, Lord Hill-Norton. He's expressed a belief that UFO encounters are "antithetical to orthodox Christian belief" (Mufon, "Satanic UFOs").

The group has come under fire by other UFO organizations like AUFORA, which disputes the group's findings and offers several

arguments. AUFORA has offered their feedback from group members and participants. The Alberta UFO Association is now calling itself ExoScience.

In the Holy Bible's "Book Of Job," Jehovah asked Satan, "From where have you come?"

The devil answered and said, "From going to and fro' in the earth, and walking up and down in it."

> Whatever a man does, he must do first in his mind. (Albert von Szent-Györgyi)

The Historic Apocrypha

This particular chapter in the book will show that the misinformed are the uninformed. My aim and goal is to present the evidence as it is. One of the best ways that I have found to do this is to research the very core of truth. Misconceptions abound concerning the UFO phenomenon. Whenever possible, I will eliminate those. Part of being a good UFO researcher, is having the ability to ascertain the truthfulness in all of the available subject matter. This is not always easy, especially when we have to go back into the historical record.

This is where most of the misconceptions lie. I believe that this is due, in part, to the way that history and information is recorded and stored. It is here that the answers can be found. There is none so blind as (s)he who cannot see.

One of the best places that I have found to study the interactions between God and man is found in the Holy Bible. This is one very reliable historic document, which has *never* been proven wrong. In fact when the Condon Committee was examining the evidence, they explored the historical aspect of UFO encounters.

History contains evidence of God and man's existence *together* throughout the ages. Some speculate that this would suggest some part of an eternal *plan* or *destiny* that man is yet to fully realize in this present age.

Evolution or Revolution?

There is a far deeper and more spiritual side to our purpose here on earth. In light of eternity, man has been created in the image of the eternal—God. We did not evolve from apes. I don't buy that theory of evolution. I have found a break in our link between man and apes. It's not missing. There is simply no connection. Even if we disregard this fact, other archeological evidence suggests that the brain pan of our alleged early ancestors indicate that they were not related to us nor could they have been. They were simply another species of animal that either continued until today or simply ended in extinction.

Contained within the geologic record, the planet Earth has (1) been hit by several large bolides and/or comets in our geological past, (2) incurred one or more Ice Age periods along with deep glacial spreading, (3) experienced a polar shift and numerous vacillations of the poles in between. The current location where it resides today is not etched in stone and could change at any second.

Another plausible theory held by scientists at Pennsylvania State University postulates that the earth may have tilted at a different attitude than the present position today.

> The Earth might have tilted toward the sun 600 million years ago far more than it does today, making the polar regions warm and the tropics cold, according to research published today in the *Journal Nature*. Scientists say this could explain evidence that there once were glaciers in what are now the tropics.
>
> This theory of planetary tilt has been around for a while, but researchers at Pennsylvania State University have come up with an explanation of how the Earth could have moved from an angle as great as 55 degrees to its current position, a more modest 23.5 degrees.
>
> The buildup and melting of glaciers during this period might have created enough force to cause the planet to straighten up on its axis, researchers said. (AP Wire Service, source: CNN.com, December 3, 1998).

There are two main theories concerning the origin of mankind and the universe. These typify the ongoing struggle between evolutionists and creationists. Both require a tremendous leap of faith, and they are evolution and creation.

Evolution: This theory postulates that mankind and the universe originated with the big bang. Scientists disagree how the whole thing got started. Some theoretical physicists speculate that two random particles, or atoms, were floating around through the infinite void. Then by some miracle, these two particles collided. They somehow began a fusion process called nucleosynthesis, the birth of a star. This caused a supreme expansion, which resulted in more stars being created, some perfectly round planets rotating around them, etc. Somehow, on one of the planets, an organic cell would have formed *from inorganic matter*.

Comments: This entire theory has one undeniably *huge* flaw, and that is the fact that you cannot create organic matter from inorganic matter. It is a scientific impossibility! There had to be someone or something to activate the process and get it started. Some scientists have postulated that there was a “spark of life,” which got the entire process moving towards the evogenesis.

Creation: Creationists believe that God formed the heavens and the earth and started life on those planets that were hospitable to life—you get the picture. It’s the Genesis story.

Comments: If there is a God, where did he come from? Who created God? Do you believe in one God (monotheist) or many gods (polytheist)?

A spontaneous evogenesis is impossible because you cannot create organic matter from inorganic matter. Many argue that if evogenesis were impossible, then so is creation.

We are here, and that is enough. The only thing that you will find out is that arguing about it is all a waste of time and energy. I have my own beliefs based upon my life experiences, and many of you have formulated yours. There are those of you who are searching, looking for a deeper understanding of the meaning of life.

There is evidence of a lost civilization right here on earth. It was far more advanced than our own. This culture possessed a level of

technological achievement in both engineering and science that still mystifies the brightest even today. It is right here on Earth. The evidence is found throughout the world, on every continent. Within a growing body of historic artifacts perhaps lies the key to understanding this lost world. It has a direct link to the UFO phenomenon. It is a story about our roots and our origins.

One place to find good, hard evidence is in the plethora of artifacts that have been brought forth as part of the archaeological record. This is a growing body of evidence that has largely been ignored by most Christian fundamentalists. Yet this data may contain the strongest link between man and UFOs.

In light of recent discoveries in the archeological record, the pieces of the puzzle are falling into place. I have spent most of my life searching for it and the rest of my life putting this puzzle together. Why hasn't anyone else been able to put it all together? I'm surprised that no one else has. I am going to let you in on a little secret. I call it the Mertz stone of the historic Apocrypha. It is an ancient alphabet, which I call the mother of all languages. It would predate the infamous Rosetta stone discovered by Napoleon.

Having done a great deal of archaeological research myself, I have been exposed to the best data that an author can hope for. I have spent time with historians like Professor Fred Gorman of Harvard University and assisted with an archeological dig in Harvard Yard that was featured on NOVA. I have studied the work of the late Henrietta Mertz and worked with members of the American Institute for Archaeological Research. I have contributed a great deal of time and effort researching the truth in archaeology. Through our painstaking endeavors, we have proven that NEBC (*no explorers before Columbus*) in America is false. There is plenty of evidence that there were numerous cultural influences here in America long before Christopher Columbus arrived in the New World.

Lost Civilizations

Within the Henrietta Mertz collection of ancient artifacts lies a mystery. Tablets made of slate, clay, and copper tell a story of a

civilization that existed long before recorded history. The problem with the Mertz collection of tablets is that these artifacts point to a level of technology that rivals even our own. These tablets may in fact depict the very origins of mankind and the rise of ancient civilization. It is this very technology that would launch primitive man from the Stone Age to the Space Age.

Inscriptions on the upper left and right hand corners of one tablet appear to have a Greek influence in the form of a pre-Greek or post-Greek civilogenesis. It was a very ancient symbol that means “sons of the Father.” Loosely translated, it means “*the sons of God*.” The pictograms on several of the tablets show a group of men who look like Egyptian pharaohs.

The symbol that tied them all together was the mystic cross. This one, in particular, shows a group primitive people confronting a group of hooded men, perhaps following a bloody battle. Above them at the very top of this tablet in the upper left and right hand corners is the symbol for the sons of the Father, or *the sons of God*. Notice that this pre-Greek symbol is behind two men who are dressed like pharaohs. These are the sons of God, the sons of the inheritance. This is further substantiated by the remainder of that pictogram, where God is issuing forth his hand to these two “sons” as a way to further underscore his position in this matter.

Right in the very center of the tablet at the very top, please note the round object intruding from above. This is a UFO vehicle depicted by the rays coming down from it and the symbol for the Creator emblazoned right across the front of it. This word, it is believed, is in cuneiform-like symbols. Mertz believes it is the forerunner of an early Judeo-Christian pictogram, the fish symbol, which was always used to depict Jesus Christ identified as the Creator in the New Testament.

As noted by a Professor Jastrow, “Letters were a horrible mixture of ancient Greek, cuneiform and Egyptian hieroglyphs… Few early writings were pure anything—for all people borrowed from one another by way of commercial intercourse; depending on mutual convenience of understanding.”

This is *hard evidence* of an antediluvian civilization that existed before recorded history. There is every indication that it was a highly

developed culture. What's the old saying? *Nil posse creari de nihilo*. You can't make something out of nothing! The rise in ancient civilization had to start somewhere. And there is plenty of good evidence to support this premise. But what is most crucial here is the symbol that tied them all together: *the mystic cross.*

Despite the irrefutable fact that no one had ever forged these tablets, Prof. Jastrow insisted that they were "miserable fakes." Even when confronted with the impossibility of this feat, he stuck to his story and helped repress what may remain one the greatest discoveries in archaeology. But Jastrow's stance on the matter, further suggesting all of the artifacts were miserable fakes, couldn't have been farther from the truth. Further, his suggestion that this "horrible mixture" could've been from a book, such as an encyclopedia, was absurd. "No encyclopedia was produced providing evidence from his broad assertion," Mertz said. "Nothing existed from which to copy as it exists on the tablets and therefore would have been impossible for performance."

The Michigan Mounds in America were a phenomenon all their own. Back in 1890, a man who was digging post holes in an open field in Wyman, Michigan, found a clay cup. More discoveries were made, and later in the spring and summer of 1891, the excitement there couldn't be contained! Mertz recalls how "a low mound near Wyman yielded a sphinx, a vase and a tablet," which was turned over to University of Michigan. The locals believed that this was evidence of colonization from the Tigris and Euphrates Valleys—namely, an Egyptian influence.

There were other discoveries. In one mound, a box made of slate contained a clay dip lamp and three copper spears. "Hundreds of objects—numbering even into thousands—bore inscriptions in some strange writing containing characters which no one who examined them could read or tell from what language they'd come."

Plates like this one has been found in numerous mounds throughout the central USA. Many contain a hodge-podge of writing, the author calls “paint-brush” script. He believes that it predates any known language on earth.

Another aspect of historical distortion is the way in which the Holy Bible has been interpreted. This historical record is probably the richest source of UFOs in a historic aspect. I believe that *this subject has been poorly handled* by many that call themselves Christian Fundamentalists. Many profess a belief that if it was preflood, it was bad. The evidence says otherwise. And it is because of this head-in-the-sand approach that the subject of UFOs is still looked down upon by many a pulpit preacher. On the other hand, this movement also acts as a watchdog group that monitors the cults that abound within the UFO network.

From an archaeological viewpoint, there is evidence of a highly advanced civilization existing prior to recorded history. I might add that even the Holy Bible documents an interaction between the aboriginal inhabitants of earth and a people of mysterious origin named *the sons of God*. This presents a couple of possibilities as to what this genetic interaction could mean.

One interpretation is a canonical viewpoint, colored by secular Christian ideology. The second is my theory of inspirational interpretation, using my own analytic processes. I offer these with the secular, canonical viewpoint first, followed by what my research, which is based upon the original Hebrew text. Both are referenced back to the first book of the Jewish Torah. This is recorded as a preflood event and an illustration of the historic Apocrypha. Let us begin with the origins of this Biblical epoch.

> And it came to pass, when men began to multiply on the face of the earth, and daughters were born unto them.
> Then the sons of God saw the daughters of men that they were fair; and they took for them wives of all which they chose.
> And the Lord said, my Spirit will not always strive with man, for that he also is flesh; yet his days shall be an hundred and twenty years.

> There were giants in the earth in those days; and also after that, when the sons of God came in unto the daughters of men and they bare children to them, the same became mighty men of old, men of renown. (Holy Bible, Genesis 6:1–4)

Now let's begin by examining one conservative Christian viewpoint. They believe that the union between the aboriginal "daughters of men" and the "sons of God" resulted in the *giants*, or *Nephilim*, as the Hebrew text calls them. These were the evil offspring of this genetic intercourse. They postulate that God's wrath was kindled against man due to this union and the resulting offspring. This resulted in a flood, which destroyed all people except Noah, his family, and a select group of mammals. I suppose that's a safe interpretation of the Genesis story of the flood. There is a good likelihood that they are only partially correct. If we look at the *historical* record, we shall see that this is not *entirely* correct. In light of recent evidence, it is not the only interpretation to this Bible story.

Traditions of the flood are universal when it comes to mankind. "Every race has its own legend of an ancient flood," BSF says. Proof of this is found within the legends of the Miao tribe of China. An ancient legend of the flood was present in their culture long before missionaries ever arrived there. The legend holds that all men had perished in a flood "except eight souls and a hero in a boat."

The historical record is riddled with inaccuracies. In light of recent discoveries, the evidence would suggest that many Bible scholars continue to cling to old theories and washed-out research despite recent evidence suggesting that this is the case. When one examines the evidence that I have presented, it becomes clear that we are dealing with a society with ulterior motives. *Nil posse creari de nihilo*.

Recent discoveries during the Mars surveyor mapping project have revealed evidence that an ancient civilization may have existed on Mars. The Steadman Runes and the complex at Cydonia on the planet's surface would suggest an Egyptian-like influence. Could upper and lower Egypt actually be a reference to the Earth and Mars? There is evidence that would suggest that indeed this is the case.

Would this be the origin of the sons of God, and were they seeded here by God to upgrade the human race? I can only speculate. Currently, I am writing another book entitled “Tower Of Babel,” which addresses this and other perplexing issues confronting modern theologians today.

Chapter Five

Chapter Five: The Physiological Effect

Effect (noun) refers to “a change that results when something is done or happens: an event, condition, or state of affairs that is produced by a cause” (*Merriam-Webster Dictionary*)

Why do automobiles stall when a UFO is nearby? Investigators from Ford Motor Company and the group at Colorado University had reached several conclusions.

Simple magnetism could not stall a car’s engine because the critical electrical systems affected are encased in a cage of steel. As we discussed in chapter 1, magnetic mapping was done on the hood of a car that was exposed to the UFO at close range. The Condon investigators had found that the magnetic orientation of the metal had not appreciably changed.

The continuous ionization of air could do it, but it would be very difficult to maintain for any length of time. The ionized air would be radioactive. It would act like EMP (electromagnetic pulse), overwhelming the electrical system, disabling it.

> “Witnesses report frequency changes rather than ionization,” writes John Keel. He believes that UFOs are “composed of Electro-magnetic energy themselves.” Pointing to traces of radioactivity found at UFO landing sites, he believes that gamma rays are one of the constituents of the objects, not just an effect of some mechanical process. (John Keel, op cit)

Date: December 12, 1967.

Location: near Ithaca, New York

Witness: Mrs. Malley.

Abstract: Mrs. Malley was being followed. It was a red light. It began following her when she was en route to Ithaca, New York. She was speeding, so she assumed a police officer was going to pull her

over. She glanced out her window and noticed something unusual to her left, following the power lines. It was that red light, but she soon realized that it was not a police car. It was a UFO flying over the power lines—not of this world. The vehicle was suddenly out of her control. She watched helplessly as her car pulled over to the side of the road. “By itself,” Keel says. The car then “ran over an embankment into an alfalfa field and then stopped.”

She heard a voice. It called her by name. The visitors then told her that her friend had just been in a serious accident. After receiving this message from the eerie visitors, the vehicle “began moving again,” although still out of her control. “We came up out of that field and over the ditch as if it were nothing, and then back onto the road.” She said that control of the auto was returned to her from that point on. Her friend, by the way, *did* have a serious car accident around the time the UFO pilots had warned her about it (Keel, ibid., pages 66–68).

Date: October 30, 1967.

Location: Boyup Brook, Western Australia.

Witness: A. R. Spargo

Abstract: Mr. Spargo was just driving along when “suddenly his car stopped.” The headlights and the radio went dead. Although it isn’t mentioned, I believe Mr. Spargo had a close encounter event with the occupants of a UFO. Back in ’67, UFO encounters often went unreported due to the fact that a UFO was never part of their perceptual reality. We’re finding out now that UFOs aren’t always seen in conjunction with an encounter of this nature, although a UFO sighting had occurred at some time during their lives. His next recollection was that he was driving down the road. He did not remember starting the car or leaving the encounter site (ibid., 107).

“Robert W. Martz and a friend saw [an] object scoot overhead while driving near Towand, Pennsylvania.” At the same time, “their automobile engine stalled, and the headlights went out.” Both of the men remember a “wave of heat” while watching “a very awesome, flaming body which lit a large area, visible for a few seconds” (ibid., page 145).

One eyewitness to a UFO event had found a purple liquid spread around the landing site. Later, police searched the contact's car, revealing an open can of oil, which the man denied putting in the trunk (ibid., page 209).

Date: November 6, 1957

Location: near Playa Del Ray, California, on the Vista Del Mar Highway

ICR: Three automobiles stalled on the highway. Witnesses reported seeing an "egg-shaped machine sitting on a nearby beach, surrounded by a blue haze." Two of the occupants from the UFO approached the three men sitting in their vehicles. One of them asked the men what seemed like a trite, meaningless question: "What time is it?" he asked. The UFO pilots then returned to their craft. "After the men flew off in their strange machine, the motorists were able to get their cars started again," Keel reports (ibid., page 211).

Theory on UFO Effects on Combustion Engines

I have formulated a theory on how the UFO shuts down automobile engines and their electrical systems. The UFOs motive system acts upon the gravity field of the atoms in matter. The electrons stop orbiting the nucleus of the atom, which literally freezes time, placing all matter subjected to this UFO field in a state of suspended animation. One clue to how this process affects the engines of an automobile is the way that the engine functions *after* the encounter (timing is rough) and electrical system problems that often occur for the remaining life of the automobile. More often than not, these automobiles are eventually rendered useless due to the damaging effects this field has upon the wiring circuits, contacts, switches, etc.

The UFO may draw power from various sources of electromagnetic energy: clocks, radios, television, and similar sources of electrical activity. But this may only be an incidental effect of their reactor engines, *not* a requirement for motive power. I believe that their propulsion systems provide sufficient power for their needs, and the evidence would suggest this.

Suspended animation would necessarily be a causal effect of the UFO field effect and their gravity wave amplification system.

This will generate as many questions as answers. How then would the UFO be able to?

Remove large chunks of soil from landing sites?

Cause water to defy gravity, thereby rising to meet these objects as they maneuver over bodies of water?

What enables cars, animals, and other objects to be levitated by these UFOs?

There is no easy answer. The evidence, which has been reported, will indicate that we are dealing with a technology that is more science fiction than what is now applicable science fact. This does not negate the validity of the phenomenon. Rather this underscores what Hollywood producer Tim Crawford said to me once. The UFO photographic evidence has spawned a new classification in the film industry, which Tim jokingly called the “undisprovables.”

As I revealed in section 1, the UFO generates a field that has the ability to alter any form of matter or energy in the EM spectrum, which is subjected to that field. Gamma-beta radiation is also prevalent, a result of the UFOs’ reactor system.

The author on KATU, channel 2 in Portland Oregon. Compare the normal sized leaf (left) to the giant mutant leaf (right). Both were taken from the same tree in an area of high UFO activity.

The following illustration involves a case investigated by the Condon Committee, which preceded a plethora of UFO reports in and around the area where the following incident occurred. I will continue to present UFO cases in the ICR format (individual case report) format for quick identification by serious UFO researchers and investigators.

Date/time: spring 1967, on or around 11:00 p.m.

Location: South Mountain Region (at or near the Navajo Indian Reservation).

Investigator: Wadsworth.

Witness: an eighteen-year-old high school student.

UFO object particulars: The object was first seen as a nocturnal light (class: NL), which had been compared to the size and brightness of an “incandescent light bulb seen at about twenty feet, or a slow moving ball of fire.” The object descended at an elevation and distance of one hundred feet. The eyewitness described the following: “He estimated the dimensions of the object as approximately 30 by 100 feet. It was shaped like an inverted bowl, flat on the bottom and arched on top. No surface features were visible, only an overall glow that was blue at the top, blended gradually through a cream color and orange to bright red at the bottom. At times he noticed a white vapor associated with the object. The only other feature he noted was a periodic on-off manifestation of the glow.”

An image dated August 16, 2006 was sent to the author showing what appears to be an energy field, which envelopes the unknown aerial object.

Electromagnetic effects: here again, the UFO appears to generate a field of energy that behaves and acts like EMP but with several unusual adjuncts to this phenomenon. (See also my principles of the *electromagnetic-gravitational spectrum* and corresponding chart).

> The witness also reported a sensation of intense heat coming from the object, such that he began perspiring profusely, even with the car windows down. At this same time, the automobile began to sputter and miss, the radio and headlamps went out, the ammeter indicated 'discharge,' and shortly afterward the temperature indicated 'hot.' (Wadsworth, op. cit., pages 295–296)

Now here's something interesting. Since he hadn't any headlamp illumination, he used a "spotlight that was independent of the battery. It continued to function normally."

Abstract: The eighteen-year-old drove as fast as he possibly could, which Wadsworth indicated was somewhere between fifty and sixty miles per hour even under these "adverse conditions." The UFO object "paced" the vehicle "the entire twenty-odd miles to his home, the family store. The UFO separated from its position and "moved off ahead of him." The object then stopped and hovered over the store, as if to wait for him. The frightened youth drove into the parking lot of the store. "As he turned in, the object blacked out and vanished into the darkness" (ibid.).

This case has all the earmarks of the UFO/contactee paradigm. As this was still an uncharted area of UFO research, it was not addressed openly with any seriousness, although cases such as these had begun to surface during the '60s. Claims of direct confrontation by occupants of the UFO was the brunt of many jokes and remained a hidden aspect of the UFO phenomenon. It is now a fundamental part of the UFO phenomenon. It has now moved to the forefront and figures prominently in the study of this important subject.

Investigation: I will offer highlights of this intensive Condon Project investigation. A "game warden" of some standing in the community came forward and reported that he'd seen a "round, reddish object in

the sky a little later on the same evening." He had been traveling that same stretch of road when he made the sighting. Although Wadsworth said, "The object he saw was so distant that its identity with the other is uncertain," the resemblance is worthy of mention.

Gamma Radiation Signatures

While investigating the youth's auto for high-energy radiation, smear samples were taken. The analysis for this revealed that alpha and beta were at normal background levels while the gamma was a trace above normal background counts. Wadsworth casually mentions that the slightly elevated gamma radiation "may relate to uranium deposits in the vicinity." He did not say how this was relevant (ibid.).

"It was impossible to determine whether any specific damages resulted from the effects of wear and tear." The automobile's engine was "badly out of tune," he writes, "and [in] generally poor running condition." As is often the case, the UFO can do lasting damage to any vehicle subjected to its field. The amount of damage may largely depend upon the shape of the field it's generating and where you are in relation to that field. "The witness reported that after the incident, his car never recovered. It's condition worsened continually until it was beyond repair" (ibid.).

Wadsworth concluded with "No physical evidence was found that could be related to the sighting; however, features were consistent with the witness account" (Condon, ibid., page 296).

Something stuck to the roof of my mind, concerning the previous individual case report (ICR), Condon's case number 17. Whether it had any relevance, I didn't know. But it was worthy of mention. When you deal with a government that is addressing the UFO issue with absolute secrecy, anything becomes possible. I will quote it just as it appears. This mysterious clue in the UFO puzzle is given with abject impunity. And for years, the American public was none the wiser. Here is what he said:

> The above list is by no means inclusive of the sightings reported in the area. For example, the mother of witness I [the teenage male] reported two sightings of marginal

> quality. There were numerous others; but the investigation began three weeks after the primary sighting, and the signal-to-noise ratio was poor.

This could be something that the Colorado Project knew vis-a-vis the military intelligence wing of the US Army. No one would add anything to this partial sentence, for it is most probably insignificant. It may have been something that was haphazardly unedited. It could've been an oversight on the part of Wadsworth and the Condon Committee. But there is a way to measure signal-to-noise ratios. The UFO trail was growing cold. Could the appearance of this UFO be in some way related to radio frequencies? I will speculate that it is and that there is a direct correlation between this and the space-time that the UFO occupied. *Therefore,* modulation of the signal strength to noise levels could occur (ibid., page 300).

In "Radiation Level Excursions," Roy Craig documents a case where a team of scientists reported an increase in background radiation *during* a UFO encounter. This is particularly fascinating and underscores my theory that the UFO uses a fusion reactor for their warp drive systems.

Dates: 1950, 1951, and 1952.

Location: Los Alamos Scientific Laboratory.

A strange, anomalous event centered around the "rapid rise of radiation counts on radiation detection devices." This was initially documented during Project Bluebook in 1953. Craig investigated any possible correlation with these bursts of radiation and says that "Air Force investigators examined their records and searched" but "found no evidence of UFO observations." This may be the case, and radiation level excursions could occur at an area where frequent use of nuclear materials was commonplace.

Date: October 1949.

Location: Mt. Palomar Observatory.

Abstract: "Personnel from the observatory had seen something in the air" prior to sudden bursts of radiation, which had set off the radiation detectors at the facility. This had occurred twice during

October of 1949, which is, in my opinion, more than mere coincidence. In one episode, “the similarity was to a formation of aircraft.” In the other, the UFO appeared to the observers as something “similar to a bird.” Furthermore, he says that the radiation spikes that sent detectors screaming, and the “observed” UFOs were “strictly confidential.” We cannot dismiss the fact that these events could have been related to military aircraft experimenting with fissionable material, which the government was doing at that time. That would’ve been classified and may have remained so in 1967. But we cannot ignore the striking similarities between the UFO allegedly recovered from the plains of San Augustin, New Mexico in ’47, and the bird-like object witnessed at the observatory in ’49. According to Craig, the Condon Committee had never received any such reports during the term of their investigations.

This image was sent to the author of an UFO photographed over an old ICBM base in California. Compare to the description of a bird-like UFO seen over Mt. Palomar observatory back in 1949.

The Great New England Blackout of 1965

In his book entitled *UFOs from the Volcanoes*, Ergon Bach details a number of inexplicable power failures that have been attributed to the appearance of UFOs, which he calls “Gorgons.” Although his belief in UFOs runs counter to what many UFO researchers believe, he offers an interesting perspective on the UFO phenomenon. In many ways, his theories run parallel to John Keel, author and UFO contactee.

Date/time: November 9, 1965, at 5:15 p.m.

Location: New England area.

Abstract: At 5:15 p.m. Eastern Standard Time, a UFO was spotted hovering over the Clay Substation in New York prior to this massive, historic blackout (Bach, op. cit., page 101).

Bach lists other areas where interruptions in service have occurred, linked to appearances of the UFO. These other blackouts are as follows:

- Great Britain: November 16, 1965.
- Minnesota, USA, November 26, 1965.
- SW USA, December, 2, 1965.
- Cuerravaca, Mexico, September 23, 1965: these UFOs were called excessively large.
- Exeter, NH, USA, October 21, 1965: A “huge, orange-red UFO extruded a smaller disk that flew towards the power lines. It stopped several feet from them, sent a protrusion toward a wire, and seconds later, zoomed back to the parent disk.”
- La Reduccio, Argentina, December 18, 1969: A cigar-shaped object hovered above high-voltage power lines. The power lines sparked white and bluish white and arced to the cigar-shaped UFO (Bach, ibid., page 102).
- Salem, NH, July 16, 1952: UFOs seen over stacks at the thermal power station located there.
- Salem, NH, October 2, 1965: UFOs seen over stacks at that thermal power station.

I have reviewed the data that John Keel offers in his book *Operation Trojan Horse* regarding the effects of UFOs, like power failure. He makes it obvious that there is a definite connection between the appearance of UFOs and electrical power failures. This data follows:

- Huntington, Melville, Long Island, New York, USA, 1967: Power failures were commonplace throughout that year

(Keel, op. cit., page 31).

- Eureka, Nevada, April 18, 1962: A UFO had apparently originated from Canada and was eventually tracked to Nevada. Keel writes, “Then at 7:30 p.m., a brilliant flash followed by deep rumblings and earth tremors occurred in southwestern Nevada. Shortly afterward, an unidentified circular object landed near a power station outside Eureka, Nevada, and the lights went out for thirty-minutes.” Keel adds that a Lieutenant Colonel Rolph with NORAD told the press that “a meteor can’t be tracked on radar—but this thing was!” (ibid., page 150).
- State of Kentucky, January 15, 1967: Numerous UFOs were sighted in conjunction with power failures in that state during 1967 (ibid. pages 161–162).
- Jacksonville, Florida, January 5, 1969: “They were seen by hundreds of people in several small towns, all of whom found themselves sitting in the dark when a series of power failures struck at 9:30 a.m.”
- Appleton, Wisconsin, January 26, 1969?: At 12:55 a.m., a police officer reported an “orange fireball trailing a plume of blue flame.” According to Keel, “it seemed to [have] passed directly overhead.” The policeman also reported “a two second power failure… occurred at the time of the sighting.” Eyewitnesses reported “balls of fire dropping from high tension wires.” Although Keel doesn’t elaborate on this, it could have been from the insulation on those wires melting from the heat. Seven minutes later, Chicago’s O’Hare Airport, two hundred miles away, reported a similar object going from north to south. If we assume that it took seven minutes to travel 200 miles, that would be an incredible 1,700 miles per hour! Man-made satellites, which travel from west to east, can be ruled out as a logical explanation here. The “official” explanation by the authorities? It was space junk or a meteor, neither of which have been attributed to power failures (ibid., page 163).
- Eagle River, Wisconsin, May 25, 1961?: “Widespread power

failures throughout the area, which also affected local telephone service” was reported.

I was afraid it might
crack into the mountain
and was going to call 911.
Observed for 10 or 15 seconds. Then
disappeared. No noise, wheels, wings, just a
light. Very long flying object
Ventura, Ca.
Footkill Rd. near Foothill Rd.
53 feet (?) long - flying - NO sound at all
current - No lights - FF witnesses!!!

The author has received numerous reports of unidentified flying objects near hi-power or telephone lines like this one depicted in a sketch from Ventura, California.

The Condon Committee had designated a Mr. R. J. Low to investigate unexplained electrical power interruptions. He began his search through FPC records and “reported for 13 years from 1954 through 1966 included a list of 148 failures.” Out of those, 3 were listed as having cause unknown. There wasn’t any hint of UFO involvement with these anywhere in the report.

Mr. Low then checked an FPC order No. 331, issued on December 20, 1966, which required a listing of all power failures; 52 were listed, and of these, 3 were had causes unknown. In each of these 3 cases, UFO activity was listed but not the close proximity of these plants. I believe I know what happened. Here are the three cases:

Date: February 25, 1967
Location: Johnson City, Tennessee
Affected utility company: Tennessee Valley Power Authority
Event: “A high temperature detector removed a transformer from service at Johnson City. *No damage was apparent…* Loads of 36,7000 kilowatts were interrupted for 36 minutes… Eight UFO sightings are recorded… none of them in Tennessee.”

Date: May 1, 1967
Location: Rocky Mount, North Carolina
Affected Power Utility: Carolina Power and Light Company
Event: A 110-kilowatt bus at the substation tripped. Then a 25,000-kilowatt load was thereby interrupted. Three UFOs were seen on the date of the second but none in the state of North Carolina. “Cause of the interruption unknown.”

Date: June 12, 1967
Location: Lycoming and Schuylkill Counties, Pennsylvania
Affected power utility: Pennsylvania Power and Light Company (Frackville Substation)
Event: 163,000-kilowatt load interrupted in above counties when a 330-kilowatt lightning arrestor failed on a 220/66-kilovolt transformer bank at a substation above. “The cause was unknown… One [UFO sighted], not in Pennsylvania, on the date of the third.”

Northeastern USA, June 5, 1967: A massive power failure struck the region in the early morning hours.

The following case will be presented in ICR format due to the complexity of this case study. It has been documented by many. The Great New England Blackout, as it would be called, was directly linked to the appearance of UFOs over New York. What's significant here is the data that each author presents. It seems to me that each one had something to add to this case. I will present Keel's version back to back with the Condon Committee's findings for comparison.

The Great New England Power Failure (Keel)
Date: November 9, 1965.
Location: New England, Canada.

The *big blackout* has been passed around for years now, and it involves several alleged UFO sightings seen over New York City.

Abstract: All of New York City was plunged into darkness. Movie actor, Stuart Whitman, reportedly heard a sound outside of his twelfth story room. He said that he'd heard what sounded like a whip-poor-will outside his window that day. Looking out the twelfth-story window, he said that he saw "two luminous; disk-shaped objects, one blue, the other orange." No one else had reportedly seen these two objects, and if they did, no one came forward. The streets were into an inky blackness, and there were scores of people on the busy streets below. Whitman stated that the occupants of the strange craft, hovering outside his window, gave him a message to deliver to Earth. Their voices sounded like they were coming over loudspeakers. Whitman gave their message to Hollywood columnist Vernon Scott, who would eventually publish Whitman's message (Keel, ibid., page 198).

No one had seen anything. The power failure continued on throughout the evening. Power company officials were trying desperately to correct the problem. UFOs had been seen at other places during the blackout. As we shall see, the UFO behaves like a tangibly real, physical object.

Although Dr. Condon's Committee may have known how the UFO could achieve this, I do not believe science nor physics had evolved

far enough to understand. Einstein's theory of relativity would adequately explain this phenomenon. But no one was looking to Einstein for the explanation… or *were* they? The answer lies in the "massive power failure in [the] Northeast of 9 November 1965," documented, thankfully, by John Fuller in *Incident at Exeter*. The key to the previous cases involving power failures is that there were UFOs seen somewhere on those dates. The power grid is an extensive one, and I imagine that if we were to get the data on where those sightings of UFOs were made, I'll wager they were somewhere on that grid. Now what's interesting was that Fuller reported that a UFO had been seen near power lines that eventually fed into one of the greatest power failures of all time, the North East power grid.

Date: November 9, 1965.
Location of UFO sighting: Near Hancock Airfield in Clay, New York.
Affected power utilities:

1. Sir Adam Beck Generation Station, Hudson Gas and Electric Company; Queenston, Ontario
2. Clay Substation, New York State Power Authority; Clay, New York.

Witnesses: Robert C. Walsh, deputy commissioner for the FAA and a student pilot.

ABSTRACT: John Fuller (INCIDENT AT EXETER) was mentioned extensively in Mr. Low's report. Fuller wrote, "There was a curious lack of damage… only a few generators were out of action." This was a direct result of the power failure, *not* the cause… the system as a whole was in perfect repair before and after the failure."

Investigation: So what *was* the cause of the failure? A huge red ball of brilliant intensity about one hundred feet in diameter just over the power lines near the Clay substation. A flight instructor and his student pilot saw it and immediately reported it as they began their approach to Hancock Field Airstrip. The power outage occurred simultaneously. Fuller also wrote, "Other unusual aerial objects were reported from New York City, New York; West Orange; and Newark New Jersey;

Philadelphia, Pennsylvania; Holyoke and Amherst, Massachusetts. (Condon, ibid.)

According to Fuller, “Backup relay Number Q-29 at the Sir Adam Beck generating station, Queenston, Ontario was eventually pinpointed as the source of the massive failure.” A circuit breaker had tripped. The Condon Committee couldn’t offer a clue as to why this happened; they were too busy debunking UFOs. Fuller concluded that the cause wasn’t fully understood. I believe that I know why. The FPC reported, “The precise cause of the back-up relay energization is not known.” The Condon Report, however, claims that the relay was “set too low for the load.” But hey, guys, where do you suppose the “load” came from, hmmm? (Condon, ibid.)

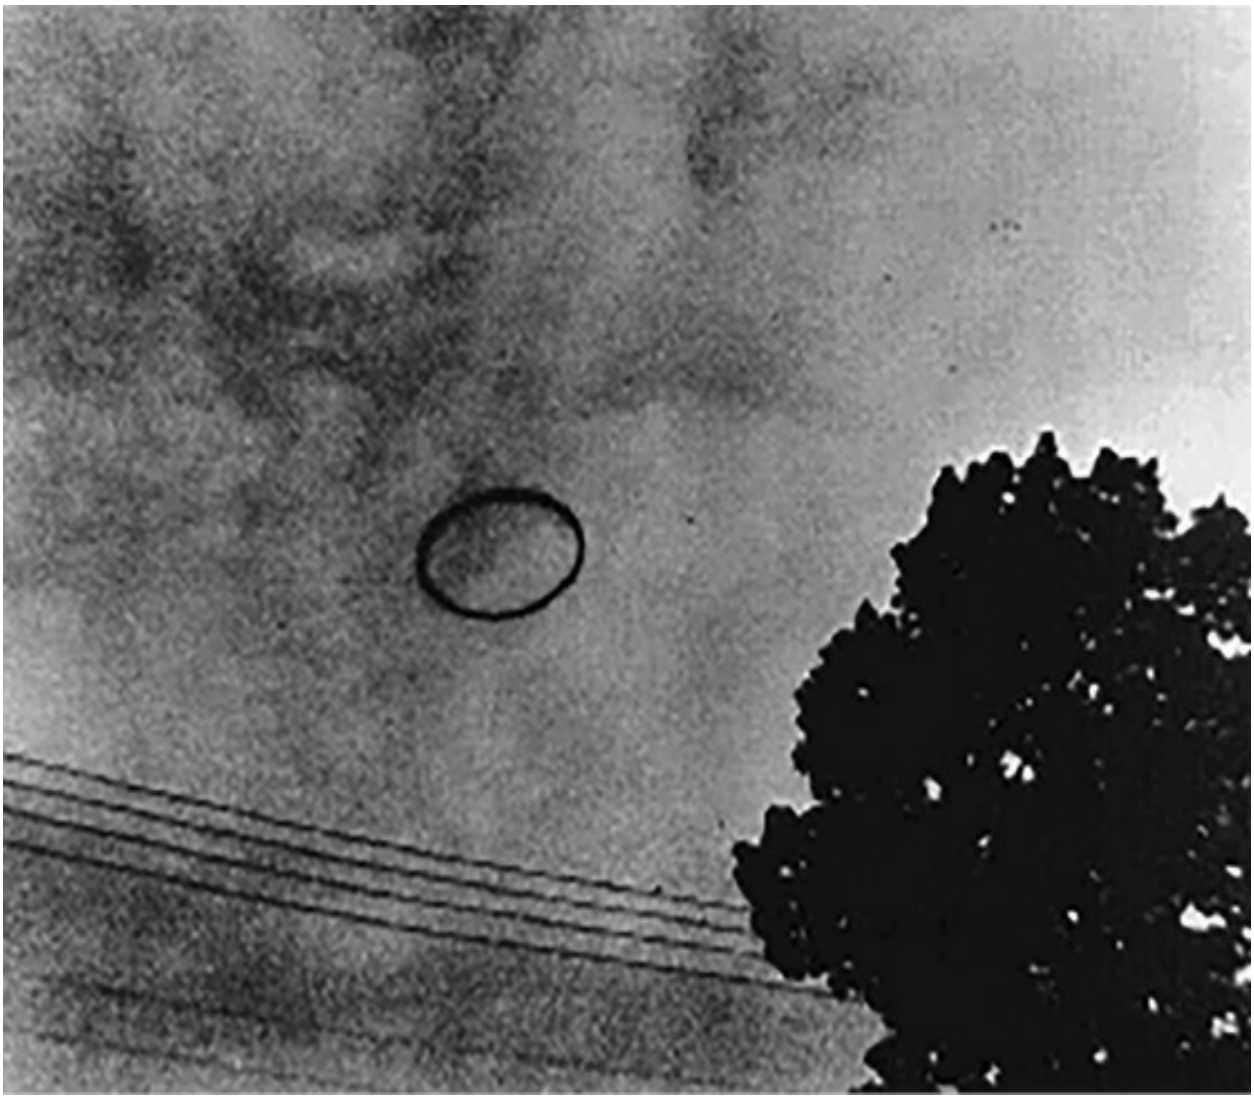
When we examine this mystery in light of recent discoveries in physics, it all dovetails together. The UFO has the ability to warp time. They enact the same affect upon automobiles, watches, appliances and those hapless witnesses who happen to be within the field that the UFO generates. I theorize that this enormous, red UFO that was one hundred feet in diameter created an incredibly huge time-warping G field. When it came close to those power lines, the area immediately within the UFO’s field became affected. The object literally froze time. The electrons, or electrical energy, ceased to flow through the power lines. This point in the power utility grid became a logjam, thereby causing power to back feed into the breaker at the Ontario power plant. Breaker number Q-29 tripped, preventing damage to the rest of the grid. It did its job just like it was supposed to do. All of that electrical energy and nowhere to go. It shut down the system. This further supports the UFO/time-warp hypothesis.

One popular theory as to why UFOs appear on or near power lines and power plants is to draw power for their propulsion systems. But if that were the case, there would be a lot more verified UFO sightings near power lines. The evidence does not support this theory.

Another theory postulates that the ionization phenomenon may be responsible for generating UFO reports. And this is one aspect of this phenomenon that must be addressed. The unfortunate problem is that ball lightning is short in duration, and rarely (if ever) disrupts power in the grid. The electrical energy would be conducted down ground

paths, which would act as lightning rods, effectively grounding any plasma of ionized gasses *before* they develop. The sad truth is that Ball Lightning could be mistaken for a UFO, although this is rarely the case.

I favor the theory that this is just a show of power. Muscle flexing on behalf of the occupants of the UFO. They are demonstrating the unimaginable power that their technology incorporates. Aside from shutting down power grids, they have also been known to activate missile systems, setting the stage for a nuclear exchange. They emulate missiles in a launch mode, activating early warning systems throughout the world. We will discuss how they infiltrate our military bases, with total impunity, in later chapters. What further underscores this treatise is the fact that Stuart Whitman claims to have received a terse warning from occupants of the UFO and a warning to the people of earth. If what Mr. Whitman said is true, it would certainly add weight to the chilling message these beings gave to Mr. Whitman. To this day, he has held to his story, unwavering in his resolve to deliver the “message to earth.”



The Condon Committee claims that this UFO was actually a smoke ring produced by an ordinance detonated at Ft. Belvoire.

Compare the Ft. Belvoire UFO to this image of a ring shaped object sent to the author over the course of his investigation.

Another aspect of this muscle flexing is that it would also give the UFOnauts an opportunity to learn to what extent our technology has advanced. If they are time travelers, as I theorize they are, they would be able to further evaluate our level of preparedness, for some future, hidden agenda.

The UFO's power systems haven't any need for electrical energy as their fuel. They incorporate a fusion reactor system, generating its own power that would be readily available in… normal tap water. It appears likely that they are using a fusion reaction from heavy water, or deuterium. This highly energetic particle is present in every drop of water on earth and is in abundant supply.

In early 1967, Jacques Vallee was working with the late J. A. Hynek, “systematically reviewing the files of the US Air Force” at Northwestern University. At that time, Hynek was involved with Project Bluebook. Vallee is believed by many to be “Lacombe,” the French UFO investigator portrayed in *Close Encounters of the Third Kind*, a movie by director Steven Spielberg. He is a serious UFO researcher who’s devoted a great deal of his time to the study of this phenomenon. I believe that exposure to methods of UFO investigation through Hynek and the Blue Book team had helped him to understand the scope and complexity of this unusual and complex phenomenon. It also gave Vallee more credibility in the scientific community.

The Dr. G. Affair

Vallee writes, “After the University of Colorado project was disbanded and after the Air Force, following its [own] recommendations, closed down its own Blue Book, I resumed my study of this case.” According to Vallee, the file didn’t seem to indicate that there was any follow-up on the part of Blue Book investigators. Mr. Vallee procured the aerial photograph from another person involved with this case, named Mr. W. The Condon Committee referred to the physicist only as the principal witness. Vallee names him Dr. G, and it is this name that I will use to refer to this physicist. Dr. G joined forces with Mr. W., an astronomer, to investigate this incident and continue researching it. (See: Individual Case Report or ICR on this incident, later in this chapter). What came forth was quite scientific in that they were able to calculate the energy output of this effulgent UFO. From the infrared aerial photograph, the location affected by the intense rays of this object could not only be seen, but also *evaluated*. This UFO may’ve left an indelible impression on the environment, further proof of its existence.

There had been other reports of a UFO in this area six days prior to Dr. G’s encounter. This UFO was a bright, white, Nocturnal Light. Dr. Condon reported that there were “several descriptions of sightings by others in the area.” One witness had reported “that about 8:30 p.m. six

days before the sighting a similar bright light had appeared near the location of the original sighting."

The object had apparently come down in the center of a clearing about thirty feet in diameter. The trees that had been facing the UFO when it settled in were allegedly "charred," according to Vallee. He took some bark samples from trees that had been subjected to the UFO's intense radiation for later analysis. He wrote that he has not been able to find a reliable laboratory to test the bark samples, a common problem for UFO investigators. Vallee believed that if he could get an estimate of the energy it required to burn the trees to that particular depth, he could "estimate the power of the source," assuming that the object was located in the center of the clearing fifteen feet away. He would like to know what had caused the trees to get damaged in this way. He proposed three possible scenarios:

- Light energy
- Direct heat
- Chemical combustion

The trees could have been damaged by fire. The Condon University team had reported that they had found an oil slick, which apparently had burned near a pumping station. This area was not identified as the site of the UFO, however. It does remain a distinct possibility. What ignited the alleged fire and where the charred trees were in relation to it remains unknown (Condon, op. cit., page 276).

According to Vallee, the shining object had "washed out his own headlights about ten feet ahead of the car." This gave them a gauge by which the "radiant energy" of the UFO could be evaluated. They arrived at a formula. This would give the total measurable output of this object during Dr. G's UFO incident. The physicist arrived at this simplified equation:

- E = 150 x d/square, therefore E = 900 MW (@ 2400 feet)
- E = 150 x d/square, therefore E = 500 MW (@ 1800-feet)

(Source: Vallee, op. cit., pages 31–35, 225–226.)

Date/time: December 30, 1966, at 8:15 p.m.

Location: in the vicinity of Haynesville, Louisiana.

Weather: overcast with fog and/or light drizzle, ceiling at three-hundred-foot elevation. No thunderstorm activity was reported.

Witnesses: Dr. G, his wife, and children.

Abstract: Witness was driving north on Highway 79, which runs between Haynesville and the Arkansas border. His wife noticed “a red-orange glow appearing through and above the tree ahead, to their left.” Further observation of this unknown object continued to remain in view as they drove north on Highway 79.

> It appeared as a luminous hemisphere, pulsating regularly, ranging from dull-red to bright orange, with a period of about two seconds. There was no smoke or flame that would’ve been characteristic of a fire. In fact, when the car came to a point about one mile from the source of the light, it suddenly brightened to a blinding white, washing out the headlights and casting shadows. The burst of light not only forced Dr. G to shield his eyes, but it woke up his children, who had been sleeping in the back seat. After about four seconds it returned to it’s red-orange appearance. (Vallee, ibid., page 38)

Investigation: The distance was estimated and the radiance of the object was compared to his headlamps. Using their formula, we can derive an approximate energy value. Vallee writes, “Without inundating the reader with complicated mathematics, this gives a lower limit for the intensity of the UFO, hence its energy.” Therefore, the following data was used to determine the radiant energy value, based upon the object’s luminosity:

- The comparative value of energy, derived by the headlights, was reportedly 150 watts.
- The distance from the car to the object was estimated at 1,800 feet but later revised to approximately 2,400 feet.

What's interesting is the way that the light intensity of the UFO and the headlights equal out. Headlamps are designed to imitate daylight as close as possible, without being too bright for oncoming traffic. If they were halogen, the headlamp to output is rated at 150 watts. If the object had been seen during the day, it may not have given any visible radiation signatures. In other words, the object would not necessarily appear as a light source.

Vallee points out that he had alerted the "noted physicist" Dr. Edward Condon about this case. Being as Dr. Condon "had been associated with the U.S. nuclear program," he felt that this case might interest him. Several scientists from Boulder, Colorado, were sent to investigate the case. Vallee notes, "Despite the deployment of helicopters and search parties, the investigation failed to locate the actual site" (Vallee, ibid., page 32).

In their report published by Dr. Condon, Wadsworth and Saunders are very vague in the wording of this investigation. They claimed that "nothing was found that suggested any relation to the unexplained light source." There wasn't any mention of charred trees, either. If this was a prominent feature at the site, wouldn't this have been of some importance and noted in their investigation? Apparently, it was never mentioned.

> In spring, 1967, the project team, together with the principle witness and his astronomer friend, began a joint air-and-ground investigation of the area in which the light had appeared. While two men in a helicopter surveyed the area, the other two operated transits to fix the location of the helicopter whenever they were informed by radio that it was over a feature of interest. (Wadsworth and Saunders, Condon, op. cit., page 278)

Although the Condon investigators had found "a burned area that showed slightly higher radiation than background," it was merely a "burned over oil-slick" adjacent to an old pump station. There were other areas that showed "similar radiation anomalies," they wrote, that had been found at other "oil slicks." The terrain consisted mainly of

trees, underbrush, and oil wells, which are visible from the photographs taken by Barksdale AFB. The investigators do not mention that Dr. G. and Mr. W. had pinpointed the actual site nor that Barksdale Air Force Base had conducted an infrared, aerial survey. Vallee's investigation revealed that they had.

The Condon Report *does* indicate involvement by the Air Force but never mentions that they had performed this aerial mission. Did the Condon Committee have something to hide? And why did the Air Force get involved with a subject that Project Blue Book had already closed?

> The principle witness arranged for the photointerpretation group at Barksdale AFB to examine aerial photographs of the vicinity of the sighting, and he and a companion went in on foot to check detailed features the AF analyst had noted. Several features were not satisfactorily identified, but nothing was discovered that relates to the sighting. (Wadsworth and Saunders, Condon, ibid., page 279)

What were those features that weren't "satisfactorily identified"? Why hadn't the CU team found the actual site, as Vallee claims? But the "principal witness" continued on, undaunted. He reported that on the night of the sighting, the closest high-tension power lines were nine miles away. The local oil companies "had no record of… fires, flares or other night activity for a year prior to the sighting." Significant radiation levels seemed to correlate with oil wells or old tank sites, but not all such sites showed an increase. A local hunter had reported that game and other wildlife was on the decline since 1966. There wasn't any trains within fifty-miles of the site.

Here is a summary of the Dr. G. affair. It is derived from the Condon Project.

The light source was a minimum of 500 MW

The witness "drove about 0.6 miles from first sighting of the light until its bright phase.

He had clocked 0.6 miles on his odometer "from that point to his final observation."

“Bearing of the light relative to the highway was between 45-degrees and 60-degrees, forward in the first case and rearward in the second case. By plotting the bearings on the aerial photo of the area,” he was able to estimate the distance of the UFO, “obtaining a range of between 1000 and 1400 yards.”

Noting that “the illumination during the intense phase was just noticeably stronger than that of his headlights ten meters in front of the automobile,” he would later say that there was no difference.

From the rough photometry, the power of the UFO was estimated at about 500 megawatts.

However, he noted that its total power might have been substantially less than this value if it was concentrated in a beam.

The Condon Project Investigators adhere to the theory that “the illumination from the headlamps ten meters ahead of the car was one JNP greater than that of the unknown source.” A later conversation with the witness on September 13, 1968, revealed that “he did not recall any difference in illumination by the unknown source and the headlamps on the road 20-feet ahead.”

This is not an exacting science… yet. Dr. G. had revised his calculations due to different configurations of distance and luminosity characteristics. There seems to be discrepancies between Vallee and Condon’s report on the incident. But on one issue they both agree. On the night of December 30, 1966, something unknown had entered our world and interacted within our reality. Neither Vallee nor Dr. Condon disputes the validity of the physicist’s claims. This case remains unsolved. What possible explanation can we offer then for this UFO?

Dr. Condon documents some unresolved issues, which I will offer to give balance to this investigation. They called the photometry “crude indeed,” given the circumstances of the sighting: weather conditions (cloudy, night observation and rain/light drizzle with accompanying fog), the location of the object (trees), and how the unknown object impinged on the roadway at a “really indefinable angle.” These and other factors will distort and alter our perception of a distal event. This, I believe, *must* be considered before the final analysis (Condon, ibid., page 279).

What I feel is important is this UFO had a measurable output of

radiant energy. We may never be able to give an exact determination as to the quantity or type of this radiation, but a crude approximation can be given. The Condon Report states:

> Interpretation of even such a result as this in terms of the power dissipated in the light source introduces further wide uncertainties, since nothing whatever was known as to the mechanism of the light source or its radiative efficiency as compared to that of automobile headlamps, or whether it was radiating in a beam toward the witness or in all directions. All of these factors bear crucially on the power estimate, so that the value of several hundred megawatts is highly dubious. (Wadsworth and Saunders, Condon, ibid., page 280)

Vallee, on the other hand, is more optimistic about this new science of UFO analysis. Going by the more conservative estimate of radiant energy potential, he says that the revised “energy level” has been estimated at 500 MW. Furthermore

> This energy figure, which is a minimum estimate, places the object in the energy range of a small nuclear reactor. Still, we may be in the position of a person trying to estimate the power of a truck by the intensity of its headlights: the actual energy figure may be orders of magnitude beyond our calculations. It is even possible, if we follow some theories of what UFOs could be, that the light they emit is only a side effect of their propulsion mechanism, as carbon monoxide is a side effect in the exhaust of an automobile engine. (Vallee, op. cit., page 34)

Date: late September 1965?
Time: 9:15 p.m.
Location: the harbor of Fort-de-France.
Weather conditions: dark sky, clear sky.
Witnesses list: twelve men and four officers of the Junon and Daphne Submarines, a dozen French soldiers for the weather

observatory personnel on shore.

Abstract: Witnesses aboard the Junon had reportedly seen a “huge ball of light or a disk” flying on its edge from the west at 9:15 p.m. The object was “about the same luminosity as the moon,” and it was the “color of a fluorescent light.” The aerial disk flew slowly from west to east with a trail, or tracer image, behind which left a “whitish trace similar to the glow of a television screen.”

The UFO stopped its flight when due south of the fleet; dropped toward the Earth; made one, two, and three complete loops; then hovered in the midst of a faint halo. “One eyewitness observed the disk as it hovered on its side over the bay. Watching the object through a pair of binoculars, Mr. Figuet observed “two red spots” under the disk. It was shortly thereafter when the disk “vanished in the center of its glow ‘like a bulb turned off.” The glow which had surrounded the object “remained for a full minute.”

Note: On one of the 8 mm movies filmed by Bill Meier, it was pointed out that before the aerial disk vanished, what looked like a small light appeared on the dome of the UFO. It then disappeared *in one frame* (the Meier films).

At 9:45 p.m., the disk had reappeared at the same place, “as if [it] was switched on.” The UFO then arose, made two more loops, and flew away to the west, from whence it came. It disappeared again at 9:50 p.m. (Vallee, ibid. pages 28–29).

Investigation: The next day, a call was placed to the weather observatory ashore. Vallee writes what the results of that conversation was:

> The man who answered the call had also observed the object. He confirmed that it was neither an aircraft, nor rocket, nor a meteor, nor a balloon, nor a disintegrating satellite, nor a plasma phenomenon such as ball lightning. (Vallee, (ibid.)

Well, that seems to rule out any identifiable phenomenon. What makes this an excellent case study is the number of credible eyewitnesses. All of them are skilled observers who were distributed

over a broad area with numerous points of observation. From the data that he gathered, Vallee was able to further access the radiant energy of this mysterious unknown object. He identifies the size of the object as ninety meters in diameter, “a formidable device indeed,” to which he adds, “given the remarkable maneuvers.”

Mensuration: The computation of the energy output, based upon the “distance and luminosity estimates given, is 2.3 megawatt (sic). Vallee says that this is only an estimated figure that he had based solely upon the luminosity of the object in the visible part of the spectrum. Vallee elaborates upon this theme when he writes:

> The phenomenon may be deploying energy in other ways—in microwaves and radio waves. If it has a material, physical structure, it will require energy to overcome gravity even if it uses extremely advanced propulsion techniques about which we can only speculate. (Vallee, ibid., page 30)

Vallee lists the energy level output of a few common (earthly) devices. We can use this table to further evaluate the luminosity characteristics of the UFO phenomenon.

- Lawnmower: 3 kilowatts (kW)
- Care engine: between 75 and 1,000 kW
- Commercial airline: 50–150 megawatts (MW)
- Nuclear power plant: into the thousands of megawatts

Date: November 5, 1976.

Locations: (a) near Grenoble, France, (b) the town of Rives, France, (c) near Voreppe on the road that runs from Rives to Grenoble.

Abstract (A)

Time: approximately 8:05 p.m.

Shortly after 8:05 p.m., a witness near Vienna reported seeing a “slightly flattened sphere, whose light was very similar to that of a very bright neon tube, with a fiery red-orange area underneath.” Its flight path was from west to east travelling very fast—Vallee reports, “one-

sixth the diameter of the full moon." Although Vallee does not link this object directly to the objects in abstract B and abstract C, it may be the same object or related to it in some way.

Abstract (B)
Time: 8:08 p.m.

Ms. M was watching television at home in the town of Rives, France, near Grenoble. Upon seeing a "bright light outside," she called her father. They both walked outside onto the balcony to see the UFO. They "observed an intense, white [light] source crossing the sky at high-speed from the northwest to the southeast, disappearing behind the mountains in the direction of Montand." The woman's father later reported to Gendarmes "that the light appeared to be spinning."

Abstract (C)
Time: 8:10 p.m.

Probably the most important of the three sightings involves a French physicist whom we'll call Dr. Serge (this is not his real name, as Vallee assigns an assumed name to protect the lives of the eyewitnesses from the dubious threat of persecution). Dr. Serge was driving seven miles away on the road between Rives and Grenoble, near Veroppe. Looking up, he "saw a luminous disk moving in the sky." After stopping his automobile, he got out "to observe it carefully."

First phase of trajectory: When Dr. Serge had first seen the object, *the UFO was almost directly overhead* flying at a constant velocity towards the east southeast in less than eight seconds, covering approximately 1.3 degrees of arc per second. He reported that it was a disk, that the luminosity was "brighter than the full moon… [and] slightly flattened (with an aspect ratio of 0.9) and an angular diameter about 12 arc minutes (the full moon has an angular diameter of about 30-arc minutes). The object was white in the center and bluish-white at the periphery. It was surrounded by an intense green halo about three arc minutes thick" (Vallee, ibid.).

Second phase of trajectory: The disk stopped, without changing size, and hovered for three to ten seconds. Then it started again in a different direction, thirty degrees away from a previous course, at

much greater speed, covering about eight degrees of arc per second and passing in front of Le Taillefer Mountain thirty-six kilometers away.

Weather conditions: clear, wind (at ground level was 0), temperature at 40 degrees F.

Analysis: From the detailed information provided by Dr. Serge, “a careful reconstruction of the sighting” was made.

> Flying at an attitude of between 1,500 to 2,500-feet, which would give the diameter between six and twenty feet and a speed approximately 1 mile-per-second, or 36,000-mph, during the second phase of its trajectory. (Vallee)

Vallee estimates the energy in the visible part of our EM spectrum “as a modest 15 kW.” Dr. Serge noted that the halo, which surrounded the object “reminded him of the color produced by the combustion of copper salts” (Vallee, ibid., pages 31–33).

(Kudos to SEPRA, the French government’s official UFO task force, formerly known as GEPAN.)

Date: June 19, 1978 at 12:30 a.m.?

Location: near Arachon, Gujan-Mestras, France.

Witnesses: Franck Pavia and Jean-Marc Guitard, seventeen-year-old males.

Weather: overcast, cloud ceiling.

Abstract: Two teenaged boys pulled off of the road to repair a turn signal. This electromechanical failure may have been due to one or more of the following causes:

- They were in close proximity to the UFO.
- They were passing over a tectonic zone.
- They had an electromechanical failure.

At approximately 12:30 a.m., “a powerful rumble like an earthquake” had made the two boys jump out of their skins. It was at that time when they first witnessed the UFO. Vallee says, “Then they saw the object. It was, by their descriptions, oval, red, surrounded with white ‘flames’ and it flew toward them at an altitude of 11,000 feet.”

Jean-Marc became “unable to breathe and fainted.” It was precisely at that same time when the UFO changed course and “flew away.” It appears that both had been badly shaken. Although Vallee doesn’t mention this, they had both showed signs of a close encounter with the UFO and/or its occupants; Jean-Marc had red teary eyes and they both had trouble speaking. (These symptoms were later noted by a baker, working at the local bakery. They’d met him at 1:30 a.m. after hiking into town from their car. This hike had taken them approximately one hour.)

Investigation: The two teenaged boys heard a rumbling first, then the UFO next. The tectonic strain theory holds that UFOs are in some way correlated to areas of high-tectonic activity. This would be true in the Gujan-Mestras, where gravity anomalies would be likely to exist. Earthquake activity can be correlated to the time of the UFO sighting by the local townspeople. I have a theory that the UFO stimulates the tectonic fault with acoustic waveforms. This initiated the release of tectonic strain and therefore piezoelectric energy from the fault itself. The UFO was then seen zooming off at an incredible speed. I have not formulated a theory as to why this type of UFO interaction is necessary, but it remains another facet of the UFO/TST paradigm. I would speculate that the object had changed color as it picked up speed to launch itself through the space-time window aperture. Therefore, there has to be a corresponding frequency change in the visible portion of the EM spectrum (orange-red to red and white). This is further evidence of the UFO’s space-time manipulation capabilities.

As the object set its trajectory near the town, it glowed as a “large, orange ball, very bright.” When the two teenagers saw it, the UFO was an oval, red object surrounded with white “flames” as it flew toward them at an altitude of eleven thousand feet (above sea level). Vallee does not indicate what the apparent altitude was in relation to the roadway that the boys were on.

At around the same time that the two teenagers saw their UFO, a Mr. Bachere was driving towards Bordeaux accompanied by his wife. They saw a similar object in La Reole. They described it as a large, orange ball, very bright, at around one thousand feet in elevation. It reappeared about one minute later, they said, before it disappeared. A

student Vallee named Mr. B had been awake during the blackout in Gujan-Mestras. He would later tell GEPAN that the blackout had occurred at 12:30 a.m. This was followed immediately by a “strong, low rumble that scared the student. In addition to this, he had observed “orange flashes above the pine trees, below the cloud ceiling.” This substantiates the two boys’ claims that the UFO sighting occurred simultaneous to the “powerful rumble like an earthquake.”

The “manager of the town utility” had also been interviewed. He showed investigators the location of the photocells that control the town’s streetlights. From this, Vallee was able to estimate the radiant energy values (REV) of the UFOs. The distance from the photocells was between 400 and 1,500 feet. When he ascertained the light activation threshold of the photoelectric cells, he arrived at a REV of between 160 kW and 5 MW. Now that’s real power!

Vallee says that there was agreement between witnesses regarding time, duration, distance, trajectory, sound, and luminosity parameters. Yet Vallee admits that there were discrepancies regarding altitude and the apparent diameter of the object.

Chapter Six

Chapter Six: Artifact Analysis

Probably the best evidence of the existence of UFOs is the physical artifacts that have surfaced over the years. These have come from a variety of sources.

Granted, *some* of this physical evidence is a fabricated hoax. It would be wise to keep this in mind as you read these pages. But the preponderance of the evidence would suggest that the UFO *is* present in our environment and exists *as a physical phenomenon.*

I have collected whatever data I could find in various publications and other sources. These would include radio and television programs some of which I am currently involved in. I have in my video library over one hundred tapes containing data on UFOs and related subject matter from which I derive some of my information. If there is a source for UFO data, I will to find it.

Much of the existing data is in the form of physiological evidence, such as burns and psychological trauma, and was explored in the previous chapter entitled “The Physiological Effect.”

The artifacts that have been analyzed come from a variety of sources. Some have come from alleged alien implants. Others have been smuggled out of US government facilities and presented to men of stature who have enough reputation that attempts by the military to recover the artifacts would result in a public disclosure of their activities. People are claiming to have been witnesses to UFOs and their activities have recovered material. These have produced effects on the soil and vegetation in the surrounding environment. *Here is that data:*

In one paper that I entitled “Physiological Radiation” I gave the particulars on the Michalek case. This involved the effects on Mr. Michalek during a close encounter with a UFO in Canada. I will discuss the artifact analysis here. It is questionable at best, and

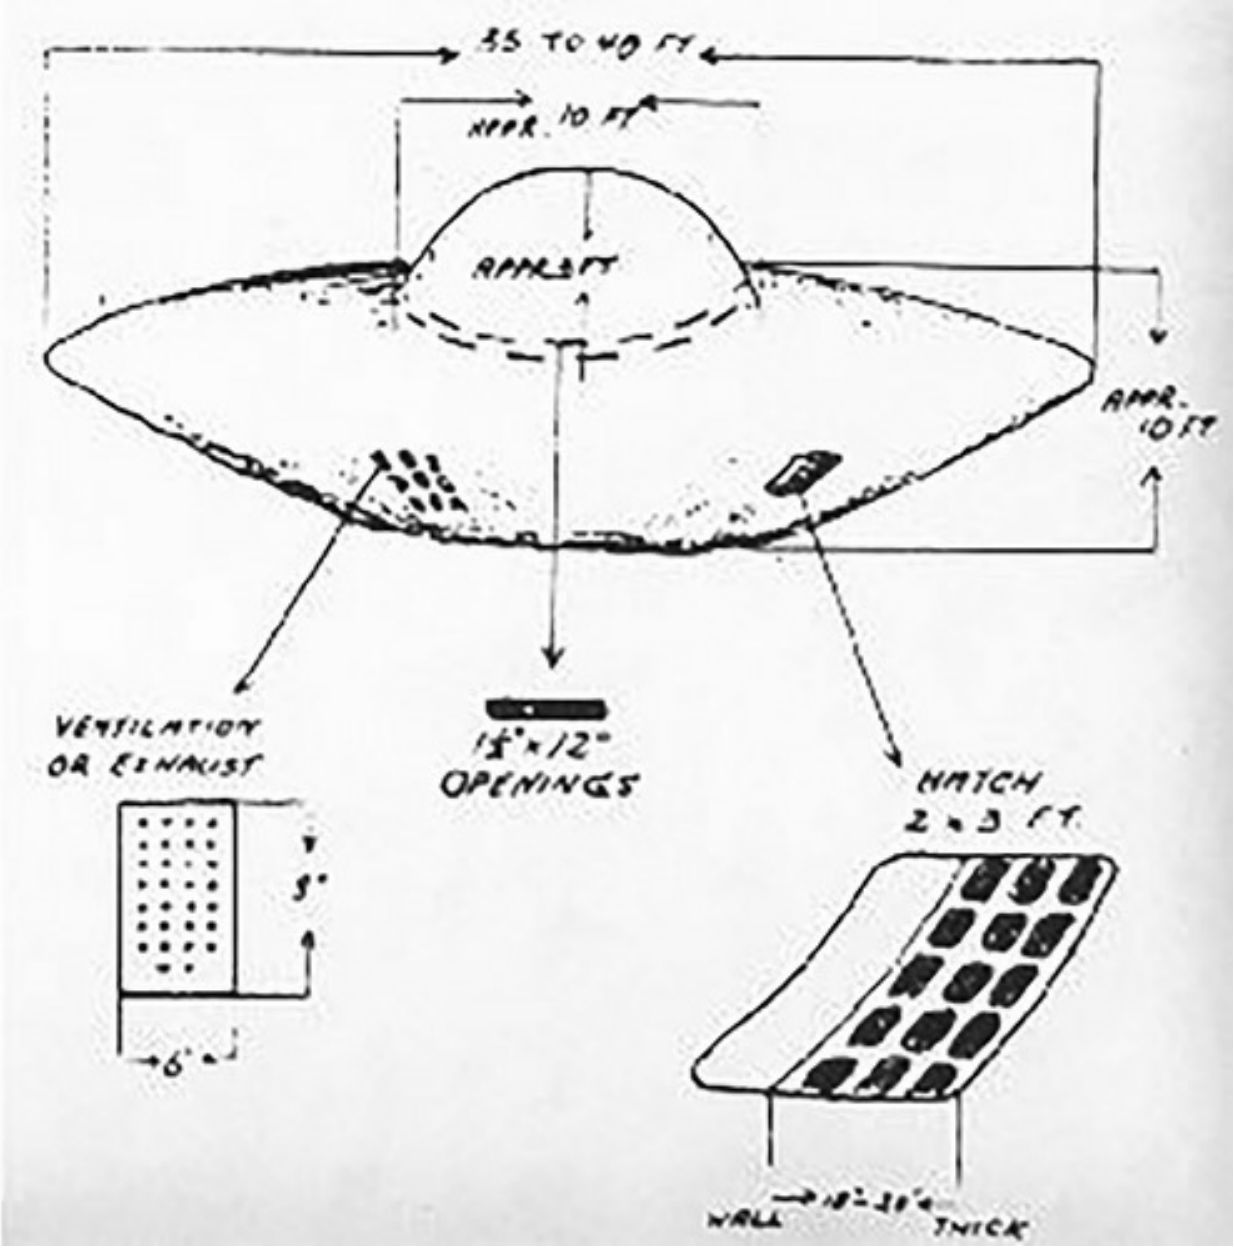
refuted by the Condon Committee, although they had listed the case as *unsolved.*

Reference source: UFONB 7 75755 31312-158.

Craig says that Mr. A (Michalek) and an associate found the site over a month after the incident occurred. “The site was allegedly still obvious,” Craig says, “with moss blown away in a circular pattern.”

Investigators took samples of moss and soil. Mr. A’s six-foot tape measure was found “some 160-feet from the landing circle in an area free of radioactive contamination.” Patterns of the burned shirt were found as well, and these three specimens were taken to a nearby city for analysis. “All three were radioactive,” Craig writes. The samples were taken to another place in a second city for analysis also. The specimens “were found to be so strongly radioactive that the Radiation Protection Division of the Department of Health and Welfare considered restricting entry to the forest area from whence they were allegedly taken.” Someone was dispatched for further evaluation of the landing site, but his or her survey “revealed that from the perimeter of the ‘landing circle’ and beyond were free of radioactive contamination” (*The Scientific Study of Unidentified Flying Objects*, op. cit., page 321).

Mr. A lying in hospital with burns he received from an UFO



A sketch of Mr. A's UFO; A close encounter near Falcon Lake, Canada

Another mystery wrapped in an enigma! The partially burned T-shirt had been tested earlier and "found not to carry radioactive contamination," yet the tattered pieces of the burned shirt *were radioactive.*

> A thorough survey of the landing area was carried out, using a Tracerlab SU 14, Admiral Radiac 5016, and a Civil Defense CDV 700 survey meter. One small area was found to be contaminated. This was located across the crown of

> the rock. There was a smear of contamination about 0.5 x 8.0 inches on one side of the crack. There was also some lichen and ground vegetation contaminated just beyond the smear. The whole-contaminated area was no larger than 100 square inches. All water runoff area were checked for possible contamination, but nothing was found. (Craig, ibid., p. 322 *source unknown*).

The eyewitness and another associate returned to the site “a year after the alleged sighting.” Craig says that they discovered “massive pieces of radioactive material in a fissure of the rock within the landing circle.” What follows is a report on the alleged material recover by the witness followed by analysis of this material.

“This material reportedly consisted of two W-shaped bars of metal, each about 4.5 inches long, and several smaller pieces of irregular shape. These items were said to have been found about 2 inches below a layer of lichen in the rock fissure.”

These specimens were “analyzed as nearly pure silver.” Craig wrote: “The results were sent to the Colorado Project by Dr. Peter M. Millman of the National Research Council of Canada.” What is interesting here is that these fragments were found to contain a central massive metal portion, which Craig states was not radioactive. I feel that this is significant, as much of the material retrieved from UFO sites have been found to partitioned in this fashion, in a manner that defies conventional manufacturing techniques even today. (See the Roswell artifacts produced by Whitley Strieber).

Mr. R. J. Traill, the head of mineralogy at the Nuclear Regulatory Commission, presented the following analysis to the Condon Committee:

> One of these specimens was 93% and the other 96% silver. Both contained copper and cadmium, and had a composition similar to that found in commercially available sterling silver or sheet silver. The metal was coated with a tightly adhering layer of quartz sand, similar to that used as foundry sand. This also was not radioactive. The

> radioactivity was contained in a loosely adhering layer of fine-grained minerals containing uranium. This layer could be removed readily by washing and brushing. The minerals were uraphane and thorium-free pitchblende, characteristically found in vein deposits.
>
> I would interpret the specimens as pieces of thin sheet silver that have been twisted, crumpled, partly melted, and dropped into or otherwise placed in contact with, nearly pure quartz sand, while still hot. They have been subsequently covered with loosely adhering radioactive material, which consists of crushed pitchblende ore, much altered to uranophane and containing hematite. These naturally occurring radioactive minerals are found typically in the uraniferous deposits of… [river x] area and in parts of… [camp x]. (ibid., p. 323)

Craig says that “the thoroughness of earlier searches of the site for radioactive material,” which makes it highly unlikely that these fragments would’ve been overlooked. His conclusion was that “this case does not offer probative information regarding unconventional craft.” I would take it one step further. The Michalek case contains inconsistencies, and it is entirely possible that Michalek had later introduced artifacts at the landing site to further substantiate his claims. The fact remains that materials were found at the site that defies conventional explanation. This case remains unsolved.

Many of the materials that have surfaced that have allegedly come from UFOs contain materials that *are* indigenous to earth. What often makes them unusual is *the way these materials are manufactured*. In many cases, such composition of minerals found in alleged alien implants will contain materials that are not found on this Earth. These implants have been recovered from the human body, which contain materials, which are of an unknown origin *that cannot be identified.*

Alien implants were explored in *Confirmation*, a television program that aired on NBC on February 2, 1999. The show was narrated by Robert Davi and featured such authors as Whitley Strieber, Bud Hopkins, and Phillip Klass. An alien implant was removed from the

wrist of a man named Paul. His full name was withheld to protect his identity. DPM Roger Leir, an implant researcher, had removed the alleged implant. He stated, “This is one of the most unusual object(s) I’ve seen in 34 years of medical practice.” The material object was examined and then sent off for thorough analysis.

PhD Robert K. Smith performed the scientific analysis at the University of San Antonio, Texas. When Dr. Smith tried to prepare the specimen for X-ray diffraction analysis, it resisted crushing with mortar and pestle. An outside layer was finally flaked off. This was the material that was subsequently analyzed. He ran several tests on the strange looking substance. “They could not match it to 65,000 known substances in their computer file,” Davi reported.

Smith comments, “That’s as many known substances on the planet as possible. If the material analyzed is indeed iron, it lacks any ordered arraignments of atoms and ions.”

Paul was later interviewed after the implant was removed. When asked how he felt after the object was removed from his hand, he said, “I had a feeling of emptiness… like a pet had died.” A sense of something important was now missing from his life, an unexpected emotion.

Light Years is a book about Eduard (Billy) Meier. In the chapter entitled “Photographic Evidence,” Gary Kinder explores the possibility that artifacts left to Mr. Meier by pilots of the beam ships are genuinely from an advanced technology.

Research chemist Marcel Vogel was asked to analyze those artifacts. Vogel was an inventor who worked for IBM and held least at thirty-two patents. Vogel worked for IBM for twenty-two years and came to be known as an expert on crystalline structures and their conversion of energy. The analysis performed by Mr. Vogel and presented by Kinder was a trite incomplete. Kinder did provide some data, which I have found to be interesting.

Sample no. 1: The specimen that I call sample number 1 did not show any unusual properties. It was a violet specimen and was easily recognized by Mr. Vogel. Vogel concluded that this was merely a piece of amethyst.

Sample no. 2 and 3: There were two specimens that were similar in

composition. This material could have passed for silver solder. Kinder said that they had unusual properties, including a layer of oxidation present on their surface. Vogel touched the surface of one of the samples with a stainless steel probe. Immediately, red streaks appeared, and the oxidized coating disappeared. The material had detoxified before his eyes and become a pure metal.

I present these in the order that Kinder listed them in hopes that he had listed the element with the greatest percentage first and the least amount last. This material was composed of aluminum and sulfur, silver, copper, and lead.

Sample no. 4: Vogel examined the triangular specimen under a scanning electronic microscope. Kinder wrote that Vogel was “looking at the most peculiar maze of elements he had ever seen.” Surely, Vogel would have recognized a matrix that was familiar to him. To the best of my knowledge, metallurgic and chemical analysis of this sample was not listed by Kinder (*Light Years*, pp. 192–194).

This was not the first time that a specimen that allegedly came from a UFO had resembled silver solder. One would think that if a hoax were to be perpetrated, it would involve something a little more exotic. My biggest question has to be, Why did the solder contain sulfur?

Vogel performed additional analysis on some specimens provided by Mr. John Delatosa. I will provide more details on this matter later on in this chapter. The Condon Committee investigated a UFO case out of Canada that produced an artifact that resembled silver solder. Along with this specimen were several photographs that the Canadian government deemed genuine.

The material was recovered near the Highwood Ranger Station, near Alberta Canada. Hartman investigated this particular case involving a UFO, which was described as being shiny and approximately twenty-five feet in diameter. “It had a silvery look to it,” said the two eyewitnesses. The craft allegedly “dropped a small object, which was recovered.” The material was analyzed, and it was composed of solder, aluminum, and magnesium. Aluminum and magnesium are materials that are commonly found in UFO artifacts. As I have said before, if the material is extraterrestrial in origin, the aluminum will not contain fluorine or fluoride. Was the magnesium

introduced into the alloy to throw off the investigators? Or was there a specific reason why the UFO employed alloys of this nature? I can only speculate.

I suspect that the Condon Committee was privy to this information but failed to disclose it. They were merely following Air Force objectives. The Robertson Panel initiated these directives in the ’50s to refute the existence of UFOs. UFOs were a subject whom the government was actively conspiring to conceal from the American people, and I believe continues to do so up to this present day. (Read my correspondence with MJ-7 of the top secret government under military intelligence.)

Soft solder is used for normal electrical connections and is primarily composed of 40 percent lead and 60 percent tin. The composition of solder can vary, depending on what types of metal are to be joined and the melting point of that material. Hard solder is an alloy that contains silver, copper and zinc or aluminum. “Metals such as aluminum which do not readily form alloys, require solder containing a high proportion of the parent metal” (*The Illustrated Science And Invention Encyclopedia*, page 2138).

As I mentioned in “Physiological Evidence,” the Bogota, Colombia, case involved a quantity of liquid ejecta from a UFO. This molten material landed in a puddle and cooled. The two students who had witnessed the event collected some of this material. The surface of the alloy was examined with ion spectroscopy. It was found to have a layer of oxy-carbide on its surface.

The material was cut open, and the composition of an interior gas bubble was analyzed. It was found to contain aluminum. Fluorine was not present in the aluminum alloy. This indicates that it was not made here on Earth. In addition, magnesium was also found, along with potassium. The remaining elements were sulfur, sodium, and silicium with just a trace of phosphorus and iron (Vallee, op. cit., pp. 42–56)

As you remember, the Condon Committee examined samples from the Ubatuba UFO. The Lorenzens provided those specimens. Jacques Vallee also gained access to some samples from a different source. He took the material and had it analyzed. This material had an unusual list of elements in its composition. The primary component of

the alloy was magnesium, with traces of impurities. Although aluminum was one of the impurities listed, it may have been such a miniscule amount, that it would not register in their tests (see “Physiological Evidence”).

In another case of UFO debris recovery, a state patrolman’s chief of police recovered some unusual artifacts following an incident involving one of its officers.

It happened to a state patrolman in the fall of ’67. The officer was making his rounds in the pre-dawn hours. He had noticed something unusual around 1:00 a.m. that morning. The cattle in the barn were “behaving strangely—bawling and kicking the chutes.” The trooper also felt a peculiar uneasiness that something unusual was nearby.

The officer continued making his rounds. At around 2:30 a.m., he came upon what appeared to be a semi tractor-trailer parked along the right side of an intersecting highway. He passed the vehicle and then turned around to check on the presumed truck. He pulled off of the road and put his bright headlights on the suspicious vehicle.

What he had discovered was a saucer-shaped craft. He reported that it hovered over the roadway approximately six to eight feet above the shoulder. Red lights shone through the windows of the UFO, which were blinking. He estimated the distance between his cruiser and the object was around forty feet. (The Condon investigators would later revise that figure to 150 feet.)

The object was reportedly tilted at an angle about fifteen-degrees from the horizontal. The UFO then glowed brilliantly, according to the state trooper.

As it started to rise from its position over the roadway, it emitted a siren-like sound.

> It rose gradually, with some side-wise fluttering, and emitted a flame colored material from its underside… With his head out the open car door, the trooper watched the object move nearly overhead, them move away rapidly, shooting out of sight. (Roy Craig, Condon op. cit., p. 390)

The chief of police returned to the scene several days later and searched that section of highway. The Condon report states that his chief was convinced that this report of an UFO sighting was not the result of hallucination or dishonesty. The chief checked the area where the trooper had seen the UFO the next morning. He recovered an unusual piece of material, which is consistent with the type of debris left by UFOs.

> He found a small piece of metallic appearing material which he did not recognize. This material, less that 1 cm long and paper thin, was offered as possible residue left by the troubled UFO… A portion of this material was analyzed semi-quantitatively. Its major constituents were iron and silicone… The chip of material was black on one side, while the other surface had the bright appearance of aluminum paint. (Roy Craig, ibid., pp. 390–391)

Ironically, the trooper that observed the UFO reported that the "surface of the object appeared to him like polished aluminum, and was quite bright in reflected light." The Condon investigators report stated that the relation of this material to the UFO was tenuous, and they believed it to be ordinary corroded earthly waste, lying along the side of the road.

This brings me to my first point: The Condon committee's argument is just as flimsy. Iron oxide is used to manufacture paint products. If they were suggesting that it was automobile paint, it would probably contain polymethyl methacrylate or an alkyd-melamine. There would have to be other substances besides the iron and aluminum present *if it was aluminum paint*. The Condon Committee did not provide this data, which would have easily put the matter to rest.

Earlier in Condon's book, Craig waffles when he states, "No additional effort was made to prove that it was or was not a piece of corroded metal can, for project investigators saw no reason to assume that it was related to a UFO, even if the UFO was real." Could this be another red herring? What was it, Craig—a pull-tab or aluminum paint or perhaps you don't know the difference (ibid., page 93)?

I believe that the state patrol has a pretty good handle on what qualifies as earthly waste and what doesn't. I would suspect that they would also have access to the proper laboratories that were qualified to examine the artifact and render an analysis of the material. Their analysis determined that the sample was "composed chiefly of iron," according to Craig. Case number 42 remains *unsolved*. I would speculate that the only reason Craig didn't write this one off was because the chief was involved. Otherwise, he would have tried to discredit the trooper. The Condon Project investigated other cases where police officers had reported UFOs. In each case, the investigators discredited the lawmen (Condon, ibid., pp. 389–391).

Regarding specimens recovered from UFOs, Vallee says that they fall into two major categories. In *Confrontations: A Scientist's Search for Alien Contact*, he asks the question, "What can we learn from all the work that has been devoted to the analysis of alleged UFO samples?" His answer follows:

> Broadly speaking, the specimens come in two forms: the slag and the silvery metal. In one especially intriguing case, the Maury Island incident, both kinds of material were recovered. In other cases the investigators found either slag or silvery metal, but not both. (Vallee, op. cit., page 44)

He goes on to say that there were numerous other cases where "liquid, oil-like residues" have been found at UFO landing sites. Although he did not document these cases in his book, others have. The analysis of this type of UFO evidence is lacking, however. It is often mistaken for motor oil and it is similar in viscosity and appearance.

There is one case where artifacts were recovered from an alleged collision between a UFO and an automobile. Both Roy Craig (the Condon Report) and Vallee (*Confrontations*) have documented this case. Vallee must have received some of his information from APRO as they provided these samples to the Condon Project. Vallee wrote:

> In 1967 a collision is said to have taken place between a car and a UFO near Maumee, Ohio. The next day the driver

> found a small lump of metal at the site and some ‘fibrous’ metal on the car. This fibrous sample turned out to contain 92% magnesium, according to Lorenzen and Condon. (Vallee, ibid., page 44)

Condon does not list the percentage of magnesium in the sample but does provide additional information on this unusual case. Craig headed up the investigation. He documented this case as having occurred on July 16, 1967.

> One of these (samples), a tiny piece of thin, rolled metal, was shown by analysis to be an alloy of magnesium, aluminum and zinc. The other sample, weighing several grams, was an iron-chromium-manganese alloy in (an) unworked, crystalline state. (Roy Craig, Condon, op. cit. page 93)

Craig makes an important point. First, one would have to demonstrate that the artifact came from the site of a *genuine* UFO encounter. Second, one would have to somehow prove that the specimen was not there *prior* to the encounter and that the evidence was not introduced *after* the event. Third, and most important, is the handling of the UFO specimen. Craig says, “A dependable continuity of custody of samples between discovery and analysis” would have to be employed. (Condon, ibid.)

Large crystals extending form one surface suggested this sample had solidified at the edge of a vessel from which the rest of the melt had been poured. Both of these materials could be produced by conventional technology. (Craig, Condon Committee, ibid., page 92).

There are two important aspects of these artifact’s description that I would like to make issue of. First, why would anyone produce a material of this nature, and for what purpose? The answer to the question would be ridiculous I can assure you that any manufacturer on earth was not producing this material at that time. There would be no conventional use for material whatsoever. The public would expose anyone who would come forward with such information to scorn and ridicule

What this suggests to me was the strangeness of this material. UFO “slag,” as Vallee calls it, is unique in several ways. The alloy recovered from the aforementioned case suggests that this material was a genuine alien artifact. I have concluded that this artifact is consistent with other samples of UFO artifacts recovered from the scene of UFO encounters.

Marcel Vogel did a live interview on KOME radio in San Francisco, California, in 1979. Vogel comments on some analysis he performed on three alien specimens. Mr. Jim Delatosa provided these particular artifacts. He had obtained them from Billy Meier. Billy Meier is in contact with alleged occupants of a UFO who claim to originate from the Pleiades star system.

> A very unusual combination from a metallurgical standpoint. I’ve shown these to metallurgists and they shake their heads. And the most unusual thing is the purity of these metals in adjacency to one another without their cross contamination. They’re very sensitive to intense light from my microscope, the metal oxidizes very rapidly. It just breaks down… I’ve never seen that. (Vogel, Marcel “Beamship: The Metal” Intercep © 1985)

Vogel’s list of accomplishments is no small undertaking. In the mid-1980s, he was a senior scientist at IBM’s General Products Division. From the age of seven-years-old, Vogel has been exploring the realm of “bio luminescence.” He studied the light of the firefly and by the age of 11 he was able to synthesize the three amino acid compound, which makes it glow. Marcel Vogel said, “From that point on I have studied luminescence… the conversion of energy in crystals.”

If anyone were capable of performing the scientific analysis on the Meier artifacts, it would be him. Vogel helped IBM develop the magnetic disc coating system that was used throughout the world. It is indeed unfortunate that he was unable to study the samples that the Condon Committee had examined.

In an interview with Jun-Ichi Yaoi, Vogel reviews his video analysis of the Meier artifacts for NTV. Vogel says that he was contacted in

April by Mr. Delatosa regarding “this unusual sighting in Switzerland” by Mr. Meiers.

> “I’ve had a rather negative feeling towards UFOs because I said unless I have something physical that I can get my hands on, just reported sightings and things like that have no interest to me. And from a human-interest standpoint, I said ‘fine, I’ll see what I can do to investigate these specimens that were left by these contacts.’ And so Mr. Delatosa contacted Mr. Stevens and he wrote to me the letter and sent me three specimens.” (Marcel Vogel, ibid)

Here are the results of that analysis. Under oblique illumination, the specimen was described as being silvery in color, like it was melted. By omitting the analyzer, Vogel was able to bring out specific attributes to this material.

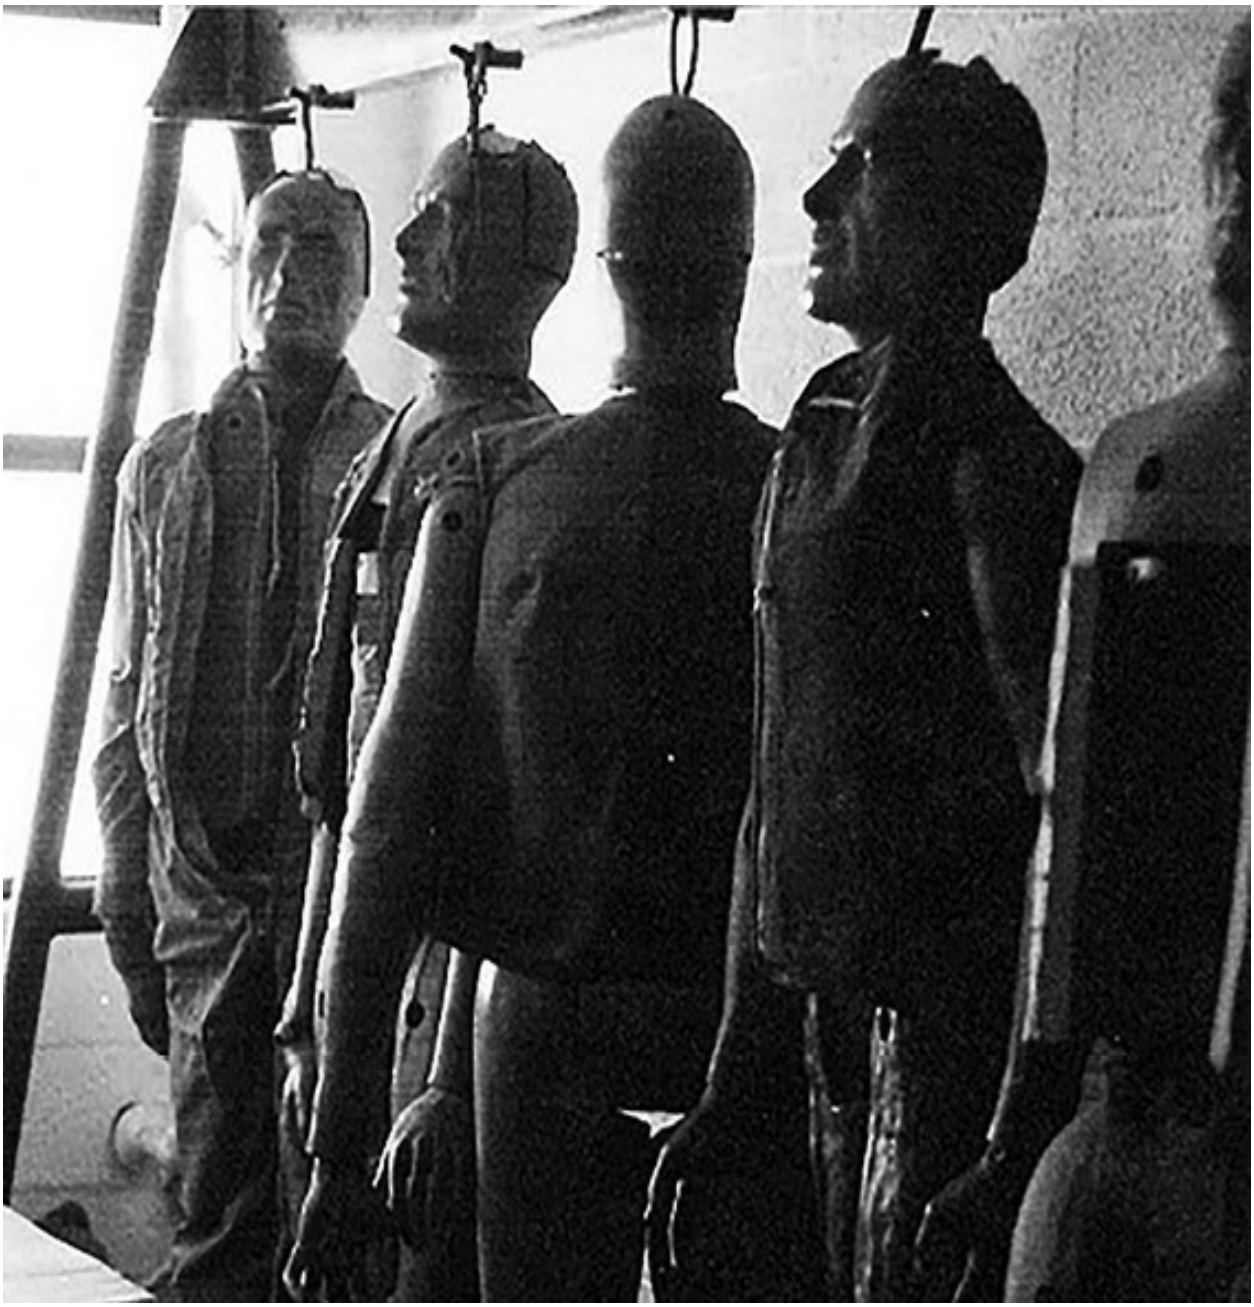
At an eighty-diameter magnification, “one does see the white crystalline biofringent deposits,” Vogel said. “One side looks like it was highly melted, the other side has some crystalline occlusions attached to it. There was no objective lens, but rather a PH position with a Bertrand Lens. This sounds remarkably like what Craig described!” (*Beamship: The Metal*)

> At a magnification of 120 diameters, “a vein of highly byre fringent material [was] running through the specimen, characteristic of lava-like flows. Someone suggested [that] this specimen was made by a cold-flow process, with… very distinct lines… like the material was kneaded and flowed together… this is pure exploration.
> “One sees little tiny crystallites… Discreet bands of material like they’ve been manipulated rather than made by nature. (Marcel Vogel, ibid.)

The Maury Island incident is amongst the earliest documented UFO cases where the Air Force was dispatched to investigate. A number of specimens had been recovered in this well documented incident, which was alleged to have occurred in 1947. It has been thoroughly

investigated by numerous parties. Most overlook the fact that one of the witnesses (a harbor patrolman) was told not to talk about the incident by “a mysterious man.” These kinds of terror tactics are still employed by our secret government (see the case of Jonathan Reed). This alone would raise my suspicions that this UFO incident *did in fact occur* near Tacoma, Washington, in 1947 (Dr. E. U. Condon, ibid., p. 504).

Kevin Randle touched on the Maury Island, Washington, case briefly in *A History of UFO Crashes*. But my data indicates that he is somehow related to the secret government as well, employing a misinformation campaign to elude the truth about UFOs. He considers the Maury Island incident a hoax. But I do not discredit the former military officer on these grounds. The fact is that before Lt. Colonel Phillip Corso came out with *The Day after Roswell*, Randle was telling the public that the crash occurred on the ranch of Mac Brazel. Only debris was found there, along with a radar sonde, which the military used to dissuade the public concerning the truth and whereabouts of the actual crash site. The truth is that a wing-shaped UFO was recovered, complete with humanoid occupants, near Corona.



The US Air Force has suggested that the aliens recovered in Roswell New Mexico in 1947 were crash-test dummies. But the USAF didn't use crash test dummies until the 1950s!

Randle had employed smoke and mirrors to detract the public from the actual site of the Roswell crash by discrediting a man by the name of Gerald Anderson, who claimed to have information about the incident. Randle devoted an entire chapter in his book *The Plains of San Augustin, New Mexico* to debunk Anderson. Stanton Friedman took up his case and published details about the site of the actual

wreckage recovered at the arroyo on the Plains of San Augustin, near Corona, New Mexico. Randle never mentioned the actual location of the wreckage, which I believe he had knowledge of.

Kevin Randle was even so bold as to mention that the international director of MUFON, Walt Andrus, had written him a letter regarding this matter. Andrus had contacted him in a letter. He states that Andrus wrote “I won’t comment on your response to John Carpenter as it concerns Gerald Anderson, but only say that the truth will prevail.” And prevail it did. Whether Corso knows it or not, *The Day after Roswell* corroborated Anderson’s story. The details told by Anderson jibed in nearly every respect. Randle has egg on his face.

Regarding Randle’s book *The October Scenario*, Andrus asked him, “Who influenced your response, the US Air Force?” I believe Randle is probably a shill for the Air Force in a campaign to debunk UFOs (Randle, page 37).

For more information on the Roswell crash, see my thesis entitled “Crashed UFOs.”

The following information was taken from Art Bell’s radio interview with Whitley Strieber. The data documented here involves debris that was allegedly recovered from a crashed UFO near Roswell, NM. Although the exact location, as well as the authenticity of this historic event is in question, the tremendous volume of data that has been produced regarding this incident can no longer be ignored!

This story has been documented in so many books and magazines that most magazine publishers do not want to publish the story anymore. It has gotten to the point of overkill, so I will focus on the meat and potatoes of my research: The hunt for data concerning the physical evidence of the existence of UFOs.

We begin with excerpts from a radio interview done on Art Bell’s program. He interviewed Whitley Strieber, author of *Communion*. Art’s parts are pieces of the skin from an alleged alien vehicle. Art Bell said that he had gotten them from a person whose grandfather was a member of the recovery team at the UFO crash site.

Bell gave Strieber a sample of the fragments, which he in turned analyzed at a leading materials laboratory in Texas. Whitley Strieber did not want to disclose the actual location. He alleged that the head

of the laboratory was afraid of retribution if our secret government, were to find out.

Whitley said that this UFO fragment had registered sixty times the normal background count of radiation. This material was “found to be magnesium foam, sandwiched with very thin layers of bisthmus between them.” The scientists at the lab could not explain this. In question was what was holding these microthin sheets of bisthmus and magnesium foam together. This would also remain a mystery.

“The bisthmus is not adherent, they should not stick together,” Strieber explained, “There was nothing to glue the bisthmus and magnesium together. Scientists have tried to reproduce the material in the laboratory, which Strieber claimed was impossible. They even attempted to grow the material without success.

Some of the material had the appearance of scorched metal. What’s more*, the tensile strength of this strange metal is phenomenal.* Art had some of the material examined by a scanning electron microscope, which only deepened the mystery, providing more questions than answers*.* They had found that high heat had been applied to the material, including the interior layers” (*Coast to Coast AM with Art Bell*, December 10, 1998).

The evidence would suggest that the artifacts that are alleged to have come from UFOs have properties that defy conventional explanation. Those individuals who have come forward with said evidence have good standing in our community, haven’t any history of mental illness, and often hold positions of respect and authority in our country. If they can be trusted and have these to their credit, why then should we question the validity of what they are saying?

Chapter Seven

Chapter Seven: Cascade Mountain UFO Incident

What follows is one of the most fantastic UFO cases in history, something that we in the UFO investigation field would call a hot file. Although most people don't realize it, many on the cutting edge of ufology have often endured enormous risks in gathering their stories. These photojournalists and writers often risk their lives to recover stories like the one that you are about to examine.

You are about to experience another dimension.

On October 19, 1998, 3:00 p.m. PST, the story begins in the Cascade Mountains in Washington State. Dr. Jonathan Reed and his dog are on a day hike. They stumble upon a hideous creature, which kills the doctor's dog. In the process, the good doctor manages to incapacitate the being.

During the next three hours, he manages to locate the being's UFO vessel and get the best 35 mm photographs and 8 mm film footage that anyone has ever published.

Dr. Jonathan Reed and his dog, Suzy, parked their jeep at the trailhead around 1:00 p.m. (PST) It was a fairly well-known Cascade Mountain hiking trail. Dr. Reed set out with a backpack and some day rations. He also packed his 35 mm camera and an 8 mm video camera on that fateful October day. He chose a side trail; the skies were gray and overcast. Dr. Reed and his seven-year-old golden retriever, Suzy, set out for their hike.

Dr. Reed described the area as a fairly mountainous region that made for a great day hike and described the Pacific Northwest as a beautiful area. He would soon realize that a very insidious force was soon to forever change his life.

Dr. Reed said that approximately eleven hours into the hike at around 3:00 p.m., "the dog is just going crazy, just sniffing nature, you know, feeling amorous. She's out investigating everything and all of a sudden, she took off like a bolt of lighting, which occasionally dogs

do… We had seen a deer earlier in the day. And the same type of thing happened."

But when his dog took off this time, the dog's behavior had changed. It began barking, which the doctor did not consider unusual, because as he said, "this was not something that I was too upset about because raccoons and dogs don't get along." What Suzy encountered, however, had not originated from our space-time continuum. This would become clearly evident.

According to Dr. Reed, "The barking tone had changed its tone. The tone went from being a normal dog barking at something, to almost terror or anger, like it had trapped something." Thinking that this could be a bear (and there are black bear in Washington State), he hurried his pace up the trail. He wondered if it was a big cat as he noticed that Suzy was nowhere in sight. "She was probably 100 to 150 yards ahead of me," he said. "And the brush was fairly heavy. And there was a ridge that I could not see over." Fearing that he should proceed with caution, he picked up a big stick lying alongside the trail. It was, he said, "about the size of a baseball bat."

The retriever began howling. He thought that she was being mauled by a wild animal. He recalled that it was "almost a yelping versus a barking." As he hurried up the trail, he hiked up over the ridge. The sight that would meet his eyes was most certainly unbelievable. Dr. Reed would soon encounter a being from another world.

"The only way to describe it would be that the air around the subject that I was looking at was vibrating very, very fast… almost like a paint shaker," he said. Moving as fast as it was, he couldn't be sure *what* it was. His initial reaction was that he thought it was a child. "But then I knew It wasn't."

If one has ever watched a paint shaker mix up a gallon of paint at the hardware store, they'd notice that there is a blur along the entire path that the can takes as it's being shaken. But if one looks carefully, you can make out that it *is* a can… and that's about it. It is, what I would call, an indistinct image.

Dr. Reed then observed that the dog had somehow managed to grab the arm of this child-like being by the arm. With the dog's quick, canine instinct, it was fighting for its life. In all the confusion, Dr. Reed

noticed that the creature appeared to have ripped the snout off of the dog's lower jaw in a blinding maneuver to remove its arm from the dog's maw.

It is clear to me that this being was moving faster than would be possible in our time continuum. From the ultradimensional's perspective, time had been slowed to the point where it would be virtually impossible for the dog to attack it. This being had probably never encountered a canine. By its quick, instinctive movements and Jonathan's gut feeling, he thought that the extraterrestrial was merely "defending itself."

His observation was that "at that point, my dog started to die." But if this is true, it was probably over before he even arrived to render the dog assistance. Dr. Jonathan Reed concurs. Dr. Reed said, "I was so emotional that I literally yelled for the dog to let go." What the doctor had not realized was that it was too late.

According to Dr. Reed, "At that moment, this creature looked back at me and stopped. And that was the first time that it stopped vibrating." Dr. Reed had commented that it was the first time he could actually see "the creature's full body, and face, and arms and legs. And you saw the whole creature, really at that point."

A Look That Could Kill

The creature glanced over at Dr. Reed and gave him a "look that could kill." It then turned its stare back at the dog. Before the being had a chance to react to him, he swung at it with the homemade baseball bat. Dr. Reed said that the being "had stood there and kind of took a step back, looking at the spot where Suzy was. And at that point, turned, and… looked toward me as I lunged at it."

The following data is a breakdown of the eyewitness's descriptions of the alleged "extraterrestrial," and Dr. Reed's personal testimony. This information is compiled from a number of sources:

- Some of the information was gleaned from Art Bell's interview with Dr. Reed. This was broadcast on Art Bell's radio talk show entitled *Coast to Coast AM with Art Bell*.

- Analysis performed on the four 35 mm photos that accompany this article were performed by an expert photographer.
- Additional insight has been obtained from my personal corroboration with Dr. Reed. He has contributed his own insight and observations as well as patient corrections. This and additional revelations are available in the forthcoming book entitled *Link: An Extraterrestrial Odyssey*, written by Dr. Jonathan Reed and co-authored by Robert Raith.

Forensic Photo Analysis

The alleged alien was like a “gray” with “very thin appendages” but with some striking differences. Its measured length was four feet, three inches long.

The actual blood type of the creature is unknown; however, from all indications, it had red blood, which would indicate a circulatory system capable of assimilating oxygen, present in abundance in earth’s atmosphere.

Although very frail in its bony structure, it may have a skeletal system that is very similar to our own (see also “Facial and Skull structure below).

The skin appears to be light beige or brown and of a leather-like composition; Dr. Reed said that when he’d first encountered the extraterrestrial, its skin was actually a bluish-pink color. This becomes readily apparent in the 8 mm film footage. The skin color changed to a tawny-brown after Jonathan had brought the creature home. The “extraterrestrial appears to have the characteristic bald pate. (Please note that abnormal wrinkling at the neck may indicate that the creature is of a significant age.)

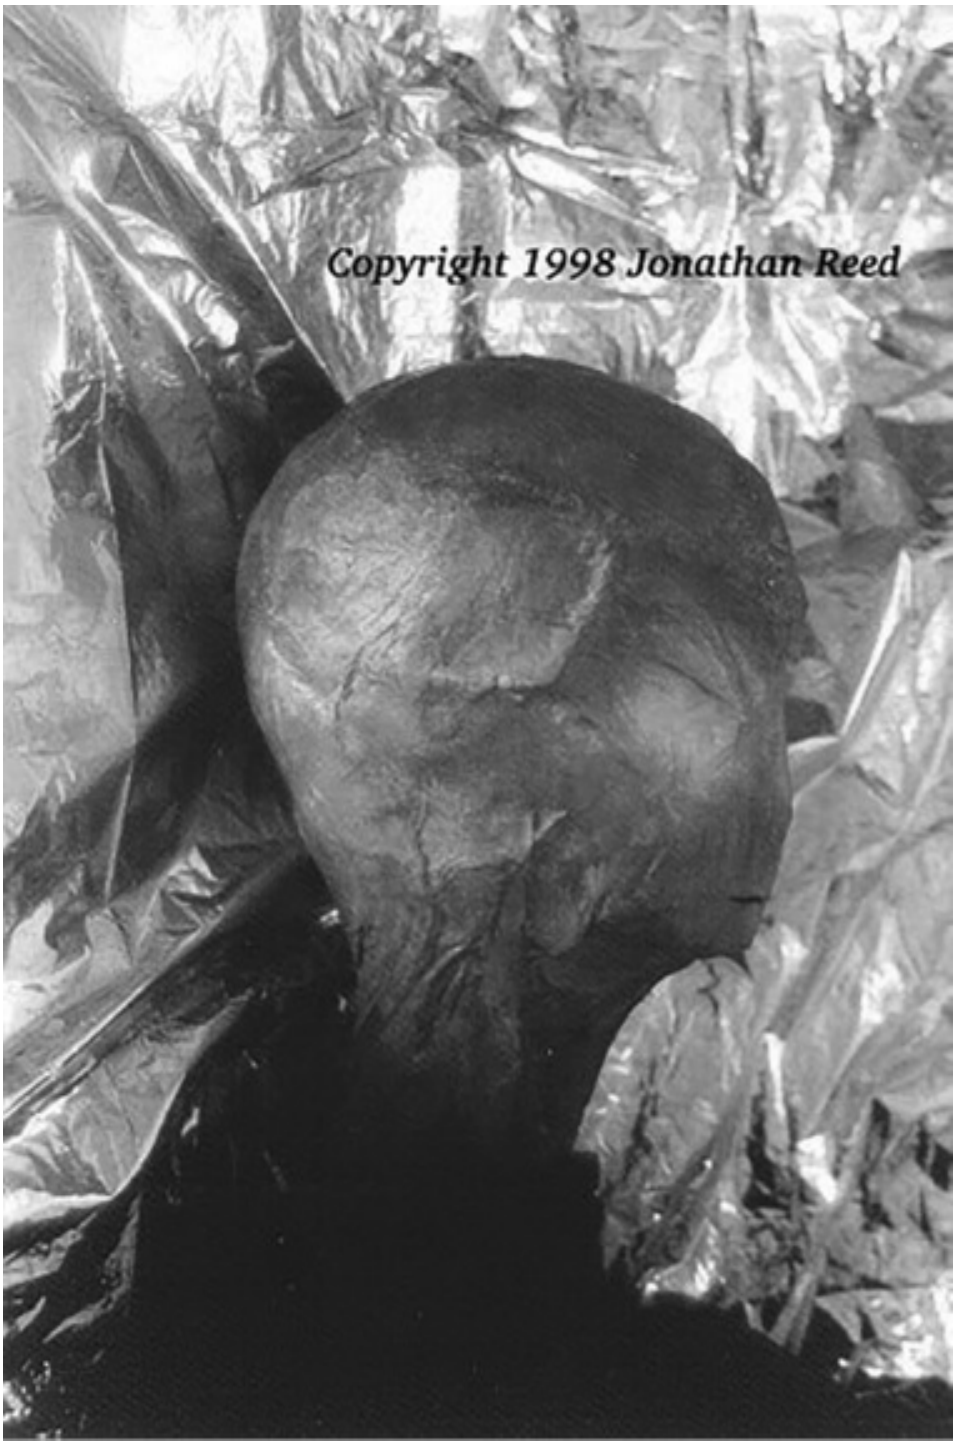


Image courtesy Dr. Jonathon Reed

Image courtesy Dr. Reed

Although its face is somewhat identical to the proverbial gray-type extraterrestrial, those who have researched them have reported that they're not all alike. For example, the brainpan is not disproportionately large, as is the case with the many grays that have been reported.

According to Dr. Reed, it's eyes had an "angular, large, bulbous shape… They were a… dark pinkish color." According to Jonathan, the eyes were one solid color and disproportionately large. In one of the photographs, there appears to be some white in the eyeballs, but this seems to be only a reflection.

In my opinion, the eye color would indicate an increased number of optical photoreceptor as well as stereoscopic, color vision. As Dr.

Reed performed the topical autopsy, he reported that there was some gray pigmentation in the area of the cornea. A slit in the skin represented a mouth; a nasal ridge terminated in two holes that seemed to serve as nasal openings.

As Dr. Reed performed the cursory examination, he had found that there were no openings where the ears should be. Dr. Reed had discovered a soft, fatty tissue behind the skin at that location, however. Jonathan has speculated that these are “some sort of sound receptor area.”

When it received a blow by Dr. Reed’s crude bat, its cranium was apparently breached. The injury would indicate that its bone composition may be somewhat spongy in nature, which would indicate why the creature’s skull was breached in the manner that it was. According to Dr. Reed, the tree limb that he’d wielded had “hit hard enough to tear a hole in the skin and in the bone material approximately an inch and a half by an inch, exposing some of the inner material.”

The eyewitness said that “it fell to the ground instantly and as it fell, it screamed… just [a] terrible scream like nothing I had ever heard before.” The being lay prostrate and very, very still. Dr. Reed believed that “he’d killed… something.”

He turned to check on his golden retriever. The dog was suddenly imploding right before his eyes! Dr. Reed had observed that a small, disk-sized hole had developed in an area directly below Suzy’s lower jaw. “The dog was drawn into the hole,” said Jonathan and that within fifteen to eighteen seconds, Suzy was completely gone. In an hour to an hour and a half later, Jonathan returned to the spot where Suzy had been. He remembers seeing a small pile of ash at the place where the dog had been.

This may or may not have been a result of Suzy’s strange transmogrification. It was, I theorize, the aftereffects of Suzy’s strange exsanguination by the ultradimensional creature. For lack of a better word, Jonathan suggested Suzy was “gelatinized (sic).”

Dr. Reed had just experienced a tremendous, emotional shock. “And after I had seen what had happened with Suzy,” he said, “the

dog that I'd had for years, I was very, very upset. I was very disturbed."

Dr. Reed attributed his health effects to the emotional trauma that he'd just experienced. But due to the fact that he is not an experienced UFO investigator, he hadn't realized that these symptoms could not be entirely attributed to psychological trauma.

When we examine his physiological symptoms in light of evidence provided by other documented close encounters with UFOs, it would suggest that they are due, for the most part, to his exposure to the time-warping fields surrounding the creature and its UFO craft, which hovered nearby.

As I have said before, the doctor was experiencing severe, emotional trauma. Dr. Reed, a psychologist, was qualified to diagnose this condition. In his own words, he stated "I had definitely (had) an emotional breakdown."

He was not, in my opinion, skilled in the experiential school of ufology. Therefore, in my opinion, he was not qualified to diagnose the physiological effects experienced by those who've been exposed to the energy field generated by the UFO and its ultradimensional occupants.

For those who do not know what these physiological symptoms are, I will list those reported by Dr. Reed as an illustration. "I was sick to my stomach. I would try to stand and walk. I was dizzy. I would become nauseated. I barely could stand. I would sit back down."

A Sound in the Air

After about an hour, Dr. Reed had recovered enough to begin noticing "a sound in the air that almost felt like it touched my skin. It almost gave me goosebumps," he said, "And I followed that sound because I thought it might be another person." Dr. Reed felt that it was his need to seek assistance, which drove him toward the strange humming sound. "I started to feel that there was something else there, another presence," he stated on public radio.

The object would, for example, be my choice for maximizing stealth capabilities, as well as energy absorption properties. Audio

frequencies are not considered to be a part of the electromagnetic spectrum, and are, instead, mechanical. My data indicates that audio frequencies do, in fact, have an electromagnetic signature and are not solely mechanical in nature. Therefore, I will present this data within an Em format.

Dr. Reed stated that “when I walked up to it, it was making a humming sound and when I touched it, the sound stopped. And as I pulled my hand back, I noticed that it changed its tone slightly and it became less irritating, the sound. Almost a harmonic that felt like a much more pleasant sound.”

My impression of what this could mean, is that the UFO demonstrated that it not only absorbs energy, but it transmits energy as well. Marc Davenport, author of *Visitors From Time*, believes that the UFO craft may behave like a giant aerial, both transmitting and receiving energy of various frequencies.

For example, after touching it, the humming had a much more pleasing tone. The craft would have had to have picked up Dr. Reed’s energy signatures and reflected their harmonics.

I would speculate that this craft demonstrates characteristics, which are analogous with the workings of an ultradimensional vehicle utilizing the kinds of technologies, which the UFO represents.

Dr. Reed had said that when he slapped it, the craft absorbed the sound completely. This would also be consistent with the abilities of a UFO craft and the technology that it represents. Essentially, the UFO craft can act like a huge energy vortex, utilizing whatever energy it is subjected to, including its vibrations.

Another feature that is clearly evident in the 35 mm photographs is how the light is reflected/refracted in the flora immediately surrounding the “obelisk.” When one looks closely at the ferns in these photographs, those in the area below and immediately surrounding this object show a reflective value that is slightly elevated.

Without access to professional quality reprints of the negatives, it is virtually impossible for any forensic photographer to determine the quantitative values used to substantiate this theory with 100 per-cent accuracy.

Ferns, by their very nature, refract and reflect more light than other

types of fauna typically found on the forest floor. But there's no way that any lens can make the background flora bright with such a dense canopy on an overcast day, even with a flash. Dr. Reed has indicated that his camera did have an autofocus feature.

The light and shadows are not internally consistent with a normal photograph. Although this detracts from the credibility of the case, it may also indicate that it's emitting its own wavelengths, including infrared radiation.

According to classic Air Force guidelines, fabricating a UFO photo falls into two main categories. They can be faked by optical means (optical illusions) or by using a solid object.

In this particular case, it appears we are dealing with a stationary, solid object. This makes it easier to evaluate from a forensic standpoint using standard methods. I decided that one of the few methods, which I could use in this particular case study, would be to determine if the two photographs show the same object.

One of my first impressions was that the UFO in photo 1 is not the same relative size as the object in photo 2. But I couldn't say for sure.

I have asked complete strangers if they noticed any discrepancies in the photographs. No one said they did. This means that the general public would probably believe that this is a genuine UFO. Dr. Reed has stated that at no time during his observation of the object did it change size or shape.

As a rule, when a photograph is faked, they'll meet tests of consistency in lighting and shadow but fail tests of size and distance. This one failed both.

To determine if the UFO objects in the two photographs are the same object, we assign a value to each object. We then compare the two values. The difference in size between object 1 and object 2 was approximately 25 percent.

This ultradimensional UFO defies all rational explanation. I propose two possible scenarios:

1. The "Obelisk" in Dr. Reed's photographs present a dimensional quality, both growing larger and smaller while within our space-time continuum.

2. Secondly, the gravitational, time-warping field generated by the UFO may be directly affecting the camera's lenses. Focal length, speed and lighting could be altered by this field.

One thing to consider is how light would be dopplerized by a gravitational field. When the image of the UFO, in the form of visible light radii, passed through its gravitational field, it would be dopplerized, sending these particles into another frequency wavelength.

This would account for the radiation burns reported by some UFO eyewitnesses. Frequencies originating in the visible light, electromagnetic spectrum could be dopplered into the form of infrared, ultraviolet, or even ionizing radiation. A lot would depend on how the G field was being generated.

Although unproven this supports my treatise on the ultradimensional nature of the UFO. This is further evidence that the obelisk has the capability of bending, or warping our time/space continuum. This underscores my treatise on the ultradimensional nature of the UFO and its occupants.

The glare present in the foreground of the "obelisk," is evidence that this object is generating its own luminescence, another characteristic of a genuine UFO. It is evident that the UFO occupants possess the capability of manipulating one or more frequencies within the known electromagnetic spectrum.

This type of lighting effect is not possible using a conventional flash-type camera. While reviewing the working copy of this article, Dr. Reed commented that he hadn't used any flash while taking these photographs.

Army counterintelligence noncom Steve Arnold was one of the first investigators on the scene at the Roswell crash in the New Mexico desert, 1947. "Arnold sneaked a look through the rip in the aircraft, and stared out through the top… It looked like the sun was already up! Just to make sure, Steve Arnold looked around the outside again and, sure enough, it was still too dark to call it daylight. But through the top of the craft, as if he were looking through a lens, Arnold could see an

eerie stream of light, not daylight or lamplight, but light, nevertheless" (*The Day After Roswell*, Col. Philip J. Corso, ret., p. 14).

You Be the Judge: Is It Real or a Hoax?

In light of research that I have done that indicates that there is an ultradimensional nature to the UFO enigma, it is my opinion that this case has all of the earmarks of a genuine UFO event.

According to Professor Leo Sprinkle, a psychologist of the Wyoming Division of Counseling and Testing as well as a consultant for APRO, "My guess is that they're more than just a physical phenomenon, that they're a psychic or spiritual phenomenon too" (*Larson's New Book of Cults*, Bob Larson, p. 433).

This challenges conventional scientific standards and practices. Science, in its purist form, is a systemized knowledge derived from observation, study and experimentation carried on in order to determine the nature or principles of what's being studied.

I propose a *new science*, one that embraces the scientific method as well as empirical observation. This would not disregard any of the evidence, empirical or otherwise. Let us then allow the doors of science to remain open, while the scientist explores new frontiers.

This story was originally broadcast on public radio on November 11, 1998 on Coast to Coast AM with Art Bell. Art passed away on Friday the 13th of April, 2018. Transcripts are no longer available.

Chapter Eight

Chapter Eight: Ongoing Terrestrial Encounters

A young lady came over one evening with a friend of mine. I was working on this book at the time, and my friend said, “I’ve got some one who wants to see those UFO photographs.” I knew that he was *really* into the subject of UFOs, and he is fascinated with the subject, although he reluctantly admits he’s never seen one. He knows that I have. I replied, “All right, let me get out of this program. It’ll take me a minute to bring it up.” Without much hesitation, I downloaded the text onto my zip file disk, and brought up the jpeg files I have on one of my 3.5-inch floppies. His friend walked into the room, and I offered her a chair. With some small chit-chat, I warmed her up to the subject of these particular UFO photographs.

And then she came out with it—the story, I mean. I had apparently earned her trust, as she had said that she has never told anyone else about this particular case. She said that it was something she just didn’t talk about to anyone—probably fearing ridicule, I thought. She did not want to reveal her age (a woman’s option), and knowing this, I didn’t press the issue. This was her story.

Date: unknown (witness was a fourteen-year-old teen at the time).

Location: Goat Rock, California.

Witnesses: multiple—the woman (Ms. J), her uncle, and his friends.

Abstract: The principal witness had been with her uncle and his friends, who were surf fishing below Goat Rock, California. She saw an object approaching from the west, which she believed to be an airplane. As it approached, she realized that it was a flying saucer, displaying unusual characteristics. When the object was nearly over the top of them, it left at an absolute velocity. She later said that it had just disappeared. A purplish cloud formed where the UFO had been, which settled onto the beach. After the incident, men visited her uncle. They were all wearing black suits. This fit the classic MIB description.

Interview: The woman (as a fourteen-year old) was near Goat Rock with her uncle, who was surf fishing with his friends. Ms. J had noticed what she thought was some form of aircraft flying toward the beach, heading straight for her. “I had thought it was an airplane, at first,” she recalled. “It had what I thought was a blinking light on it like airplanes do.” What was odd, she informed me, was that “the airplanes always fly parallel to the coast. This one wasn’t… it was flying right for us.”

As it got closer, she realized that it wasn’t an airplane at all. The object continued coming toward them. “I realized that it was not an airplane,” she had informed me. Ms. J said the object just glided in, coming up to the point of being nearly overhead. Like a good UFO investigator, I let the eyewitness tell the story, as she recalled the experience. I nodded in affirmation as I brought up the Reed photographs, onto the computer. When she saw these breathtaking, true-to-life close-up shots of the best UFO film footage ever taken, I immediately earned her trust. She described the object as a saucer-shaped UFO, with windows around its perimeter. She then corrected herself and said that from her vantage point, it appeared to be elliptical shaped. But she was sure it was a disc. The windows may have been only lights around its circumference, which she said was a “purplish color… and *very* bright.”

I asked her what color it was. She said that it was “a metallic color… silver.” When asked how big it was, she replied, “It was as big as two metro busses, end to end.” *The thing was huge,* I thought. I next asked her, “How far away was the object from you when you made your comparison?” She hesitated. After a pause, I rephrased my question. “Could you throw a rock at it?” I immediately added, “I guess it depends on how far your throw is?” We both chuckled. She said that it was pretty low to the ground.

When the object was nearly overhead, she said, “It took off really fast, like… in a split second.” She again restated her position, that she has remained silent on the matter since the sighting. “What happened next?” I asked her. “When it took off,” she said, “it left a giant purplish cloud where it had been.” The cloud then drifted down. As it did, it spread out, covering a giant stretch of beach below Goat Rock.

I began my dissertation on the Reed case that I’m currently

following. I informed her that I had analyzed the object and discovered that it had grown bigger from one photo to the next. It was not a change caused by the photographer's perspective either. That is when I explained to her my theory that UFOs travel *dimensionally*. This seemed to trigger something in her memory. "That's what I think happened," she commented. "It must have gone into the next dimension. It was there and then it wasn't." After questioning her with direct, nonleading queries, she told me that the cloud formed *after* it disappeared.

She told me, "Men in black suits came to see my uncle after we saw it. They told him that they were 'from the government,'" I asked her, "What was that about?" She said, "They informed my uncle that the object that we'd seen was a satellite and that it had broken in half upon re-entry. Then it exploded." I said "Yeah… right! It was a satellite… They sound like Men in Black to me." She replied, "That was what they looked like. They *were* wearing black suits." I informed her that if her uncle wanted to talk to me about his encounter with these Men in Black sometime in the future, he should feel free to contact me.

Follow-Up Investigation (Pending)

I come across the majority of UFO encounters by word of mouth. It is my personal belief that there is a higher power at work. It is usually a case where someone that I know tells someone that they know that I'm a journalist who documents UFO cases. It will spur people who've had UFO experiences to talk about them with someone whom they feel comfortable with. They are usually quite eager to tell someone whom they feel that they can trust. Of course, it helps if that person has a good grip on the subject, especially if that someone is a UFO investigator. The best ice breaker is to tell them that I have seen UFOs myself. If they are sincere about what they saw, this will usually encourage them to let down their defenses. I do not solicit my stories. I feel that this may generate a response from the wrong element. I just go with the flow and let the information come to me.

Jacques Vallee writes that some French researchers have been working with “the biological impact of electromagnetic installations.” They have discovered that magnetism can affect the trajectory of ions. Experiments done with mice using electromagnetic fields “ranging from 12,000–23,000 oerstedts gave affects that included the inhibition of defensive reflexes, the inducement of sleep, the creation of [a] convulsive state, or even death.” He adds that

> it is noteworthy that microwave effects impacting the central nervous system could cause the witness to experience hallucinations… physical interpretations fail to account for full range observations that are recorded in literature… Various explanations have been proposed, from magnetic fields to pulsed microwaves. They account for some of the effects, although no single explanation accounts for all of the phenomenon. (Vallee, ibid., pages 121, 123).

Theory

There is mounting evidence that the UFO incorporates an electromagnetic cocktail of frequencies. This would include wavelengths from known spectral energies as well as *those that are yet to be discovered*.

According to Vallee, one of the more common, longer-lasting effects of UFO encounters is *akinesia*, which he claims is “the difficulty or impossibility of making certain movements.” Several of the cases that I have been working on involve this type of phenomenon. One contactee that I have been working with has given this phenomenon another name, and that is being “frozen,” which I believe is a more accurate depiction of this affect. One aspect of this phenomenon is impairment of speech.

When we reviewed the case from Gujon Mestras in France, one of the principle witnesses had difficulty speaking. I speculate that this indicates that there was more to the encounter than the teenaged boys may happen to recall. Vallee doesn’t happen to mention this, but there may have been direct contact prior to their screen memory of the UFO taking off at incredible speed. The period of time between the

unknown object's arrival on the scene to its departure was, quite possibly, when this encounter occurred. The period of contact may have been several hours, but to them, the "missing time" would have been nonexistent.

I have found one good case study of the "missing time" phenomenon in the book by John Fuller entitled *The Interrupted Journey*. It involves the late Betty and Barney Hill.

The effect of being "frozen" most often occurs when the contactee is in the presence of the UFO occupants themselves, which may be a defense mechanism utilized by the UFO pilots. Another hypothesis speculates that it is a *psychological response* to what the individual's mind perceives as damaging to its psyche. This is called perceptual defense, and it doesn't just occur during contactee experiences. It can involve anyone whose mind perceives any given situation as extreme (Condon, op. cit., page 592).

> All the medical data we gathered… seems to be consistent with the conclusion that UFOs are able to focus on selected human subjects a beam of radiation that contains, among other things, pulsed microwaves that interfere with the central nervous system. Such a beam could cause the dizziness, headaches, paralysis, prickliness and numbness reported to us by so many witnesses. It could also create long-term behavioral effects; changes in sleep patterns, even dillusionary episodes and hallucinations. It is the entire phenomenology of UFO contact claims that will now have to be raised. (Vallee, op. cit., pages 224–225)

In "Field Trips," Marc Davenport writes about the UFOs ability to build a field around itself. There are several cases I would like to highlight. The first concerns a description of ultraterrestrial language that many silent contactees have described to me. One of these concerns a quote by Davenport, involving the Doppler effect on speech:

> I have pointed out the entities' obsession with time. Their behavior… suggests their problem in adjusting to our time

> frame. For example, their rapid-fire, unintelligible "language"… like a speeded up phonograph record, could be caused by their failure to adjust to our time cycle when they enter our space/time continuum. They are talking at a faster rate because their time is different than ours.

I theorize that it is not an adjustment or correction in their space-time dimension that needs to be made; but rather their protective gravity shell they can surround themselves with, even when they are apart from their ship. Their vessel must somehow project this energy into our dimension, also making itself available for the occupants of the craft through instruments, which they take with them. One classic device often reported by experiences of this phenomenon is a rod of varying lengths that paralyzes their victims when they are touched by it, or it is placed in close proximity to their persons. (See my paper "UFOs: The Ultradimensional Paradigm.")

Contact!

Category: classification no. 1.
Case study no. 12.UFONB.43100 06210.138.28.
Contactee name(s): RC and STARR.
Contactee Abstract: This is a landmark case due to the fact that that both Starr and RC have had numerous, mutual events that correlate in their

- time and duration of event
- sequencing of the event, and
- experiences during the event.

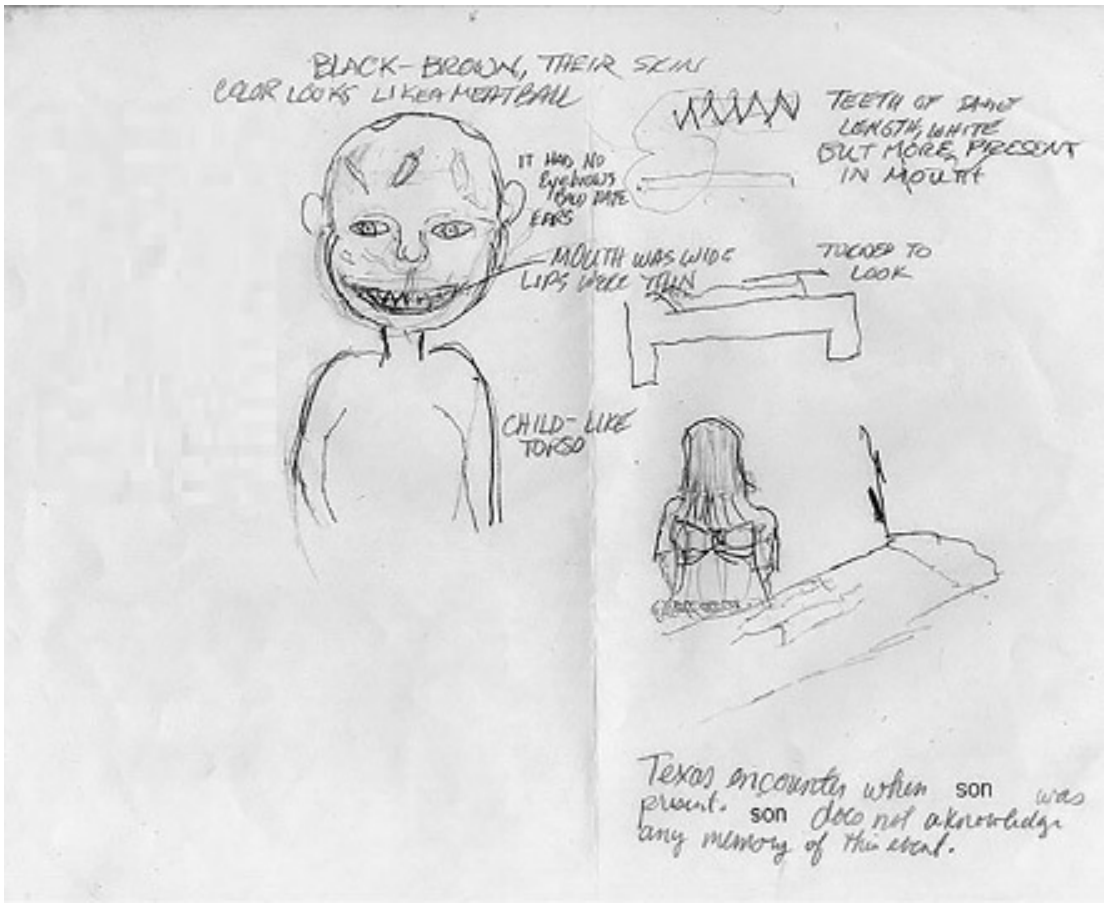
What is really novel about this study is the fact that this is one of the first cases of its kind in UFO literature. These are not abductions in the classic sense, as *most* UFO investigator would call them. The actual number of genuine abductions by UFO occupants is very small. Most of these so called abductions usually occur when the contact is at home and is asleep in his or her bed. I propose a new category of UFO research. The *mutual abduction paradigm phenomenon*, or

MAPP. Let us begin by giving a history of this man and later, his significant other.

Eyewitness particulars: RC is a thirty-eight-year-old adult male who is currently homeless and living with his girlfriend.

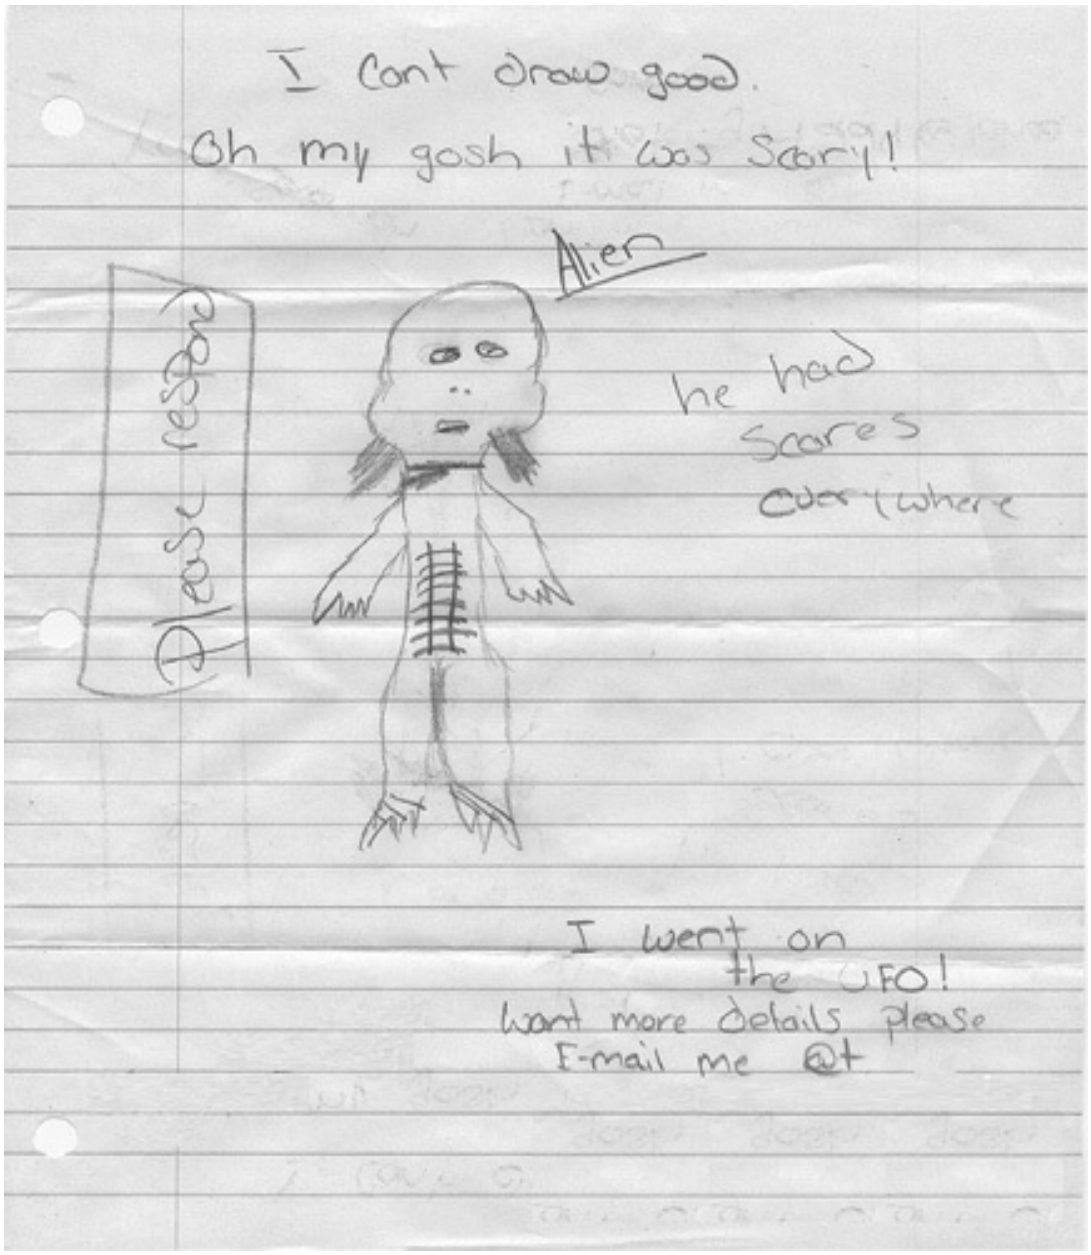
First encounter: RC says that he had his first experience in late winter or early spring of 1967. At the time, he was living in Des Moines, Washington on the North Hill district of that town. He remembers that Saturday very well. He'd awoken just prior to what he believes was his first encounter. He recalls that it was a "very sunny, spring day… the room was very bright." There were no curtains on the windows at that time. He was very lucid when he awoke, and recalls this particular encounter in terrifying detail. When he was asked about the events of the night before (Friday), his memory was absent.

He awoke, lying on his side. He remembers peering out the bedroom window as he faced north. I asked him what he was thinking about when he woke up. "I was thinking about my little red Tonka dump truck." He recalled for me how he would play in the dirt with his little toy truck. As he was thinking about playing outdoors, it happened. The seven-year-old rolled over in his twin bed to face the bedroom door and get out of bed, and "There it was, smiling at me. All I could see was its upper body at the time."



BLACK-BROWN, THEIR SKIN
COLOR LOOKS LIKE A MEATBALL
TEETH OF SAME LENGTH, WHITE BUT MORE PRESENT IN MOUTH
IT HAD NO EYEBROWS AND FLAT EARS
MOUTH WAS WIDE LIPS WERE THIN
TUCKED TO LOOK
CHILD-LIKE TORSO
Texas encounter when son was present. son does not acknowledge any memory of the event.

RC’s rendering of the creature that he saw when he was a child in Washington State and the creature dressed as a little girl, which he saw while living with his son in Texas.



A little girl following a close encounter sent this sketch to the author. It reads “Oh my gosh, it was so scary! He had scars (sic) everywhere.” (The girl’s name and e-mail address withheld to protect her identity).

The seven-year old boy’s description of this entity was as follows. “Skin color was like burnt skin, like he… his skin was cracked… like he had open sores. His mouth was [small] like that of a child.”

I asked RC, “Was he wearing any clothes?”

RC replied, “He was naked. No appearance of clothes were visible.” RC had indicated to me that at the time, he thought that it was a male.

(“He was naked…” My thoughts were that this may have only been a screen memory).

“It was naked?” I asked.

“He was naked,” he replied. (RC thought *it* was a male but believes that this was only an impression, which was a result of his feelings that it had [power] and “authority over me.”) But RC said that he was “Certain that it had no gender. It had no sex,” RC stated *emphatically*.”

RC said, “It put me back to sleep.”

I asked him, “When did that occur?”

His reply was “It was about thirty seconds later.” According to C. W. Eriksen, “the concept of perceptual defense is used by psychologists to characterize the unconscious tendency of people to omit perceiving what they do not want to perceive.” This is often accompanied by a screen memory, further masking the contactee’s perceived “reality.” What is unusual about this encounter, is that there doesn’t appear to be any screen in place, but rather an inducement of sleep. Some, like Vallee, would argue that this was due to some form of radiation affect induced upon the unwilling contact participant. This does not appear to be the case either.

So what relevance does this have with UFOs? There are numerous case studies in my burgeoning UFO files that suggest that not all contacts with otherworldly beings necessitate a viewing of an unknown object such as a UFO. I cite one example; there are other members of RC’s immediate family that *have* seen UFOs *and* claim contact with their occupants. Therefore, the evidence would suggest that UFO sightings do not always provide an interaction with its occupants. The reverse is true also, where contact with otherworldly beings does not always necessitate an observation of UFOs.

I shared this with RC’s brother, whom I will call Mr. X. He was quick to point out that on at least one occasion, he had seen a UFO while in the presence of his brother. Despite pointing this out to RC, however, he could not see it. This brings to mind two cases, where the orientation of the UFO as the distal source determines the ability to become a part of the proximal stimuli. In one case, for example, a black man that I had interviewed related to me a case where he was in southern California with his father in their pick-up truck.

The younger son had heard a humming sound that was soon accompanied by the appearance of a wedge-shaped, unknown object. It took up a position over some power lines nearby and hovered there. The son motioned to his father to look at this incredible UFO. The teenager's father informed his son that he *could not see* the object. The younger black man placed his hand on his father's shoulder, which was immediately able to see it!

In another case, I interviewed a man living in Malden, Massachusetts, who had a similar type of sighting. This man was at his home in this densely populated city north of Boston. He stepped outside one evening, to see a brilliant, unknown object overhead. There's an old adage that "Seeing is believing." This man had assumed that this object had a rational explanation.

Not believing his eyes, he stepped back into his flat, thinking that his eyes were playing tricks on him. A few minutes later, he walked back out onto the porch. Looking up, he realized that it was still there. Hoping that observing at a different angle would make this UFO easier to identify, he stepped to the left. The object moved to the left and continued to hover. He moved in another direction, and the object adjusted its position. Needless to say, the nocturnal object was still visible.

Billy Meier also is reported to have the uncanny ability to snap photographs of "beam ships" while his assistant, standing alongside him, *would see nothing*. This seems to be further evidence of this persistent phenomenon. For lack of a better word, UFOs represent a genuine *unknown*. In our present age of hyper- telecommunication, the UFO paradigm defies all logical explanation. (See *Light Years* by Gary Kinder)

In another interview with RC, I gained more knowledge into RC's paranormal sojourn. He claimed to have been in contact with what he suggests were ghosts.

"Let's go back to your next encounter with these beings," I cajoled. "When did they resume?"

RC drew a deep breath and replied, "It was after a period of ghost encounters."

I then asked him, "How long did the ghost encounters last?" He

indicated that they have occurred “Up ’til the present day. I’m still seeing ghosts… and so is Starr.”

RC suggested that “They are from another planet… that is where the critters come from, that is. The ghosts come from another dimension. It’s where God is.” This would suggest that RC has some very strong Christian ideologies, and he’s said that he was raised a catholic.

His encounters with ghosts blend with his experiences with what he calls the extraterrestrials. I am surprised that this man is this lucid with his experiences. What makes his encounters unique is that other people who are involved in his life experiences and events that dovetail into his own.

The “ghost” encounters *really* began while he was living in Texas. He was working as a traveling salesman for a local company there. RC was staying with his father when he wasn’t on the road. His otherworldly contacts there had familiar overtones, reminiscent of what many UFO experiencers have reported. This includes at least one encounter with an MIB (man in black), whom I call the shadow people. This also includes other humanoid-like beings. They allegedly have the ability to interact in our reality *in a cognitive way*. There is mounting evidence that UFOs and PK are inexplicably intertwined, and this is just one case of many that I have investigated, chronicled and/or documented.

RC said, “One of the encounters had occurred when I was living with my father in his two-bedroom trailer.” This was while he was staying in Texas. “My father was asleep. I was completely sober and hadn’t been drinking that evening. I had plotted to prove *once and for all,* that these things are a *real* phenomenon because of the way they interact in our world… in a direct physical way.” I had hid a hammer under my pillow with the intent of harming one of them, if the opportunity presented itself. I had hoped that this would provide the evidence that I needed.”

That evening, a tall, shadowy figure appeared near his bed. It then sprayed something into his eyes so that he could not see. RC then found himself paralyzed, unable to move. This is a state of being “frozen,” according to RC. He claims to have somehow communicated

with the black, silhouette. “They were there to protect the little people.” He informed me that “They could really hurt me if they wanted to” He said that he had been sent to warn him *not* to interfere *with them*. He then fell asleep because, he said, “There was nothing that I could do.” In a later interview, I asked RC how they communicated with him. He said, “They don’t *tell* me anything, telepathically or verbally. Knowledge just comes to me. It’s there, in my mind.”

These beings of unknown origin entered this man’s life when he was a small child. They had robbed him of his innocence, and I believe deliberately caused him tremendous psychological trauma. They ripped away his perception of what was real, what was tangible. It was not the result of taking acid, pot or pills. I believe that this experience, whether real or imagined, had a profound effect on the workings of his inner mind. This seems to be a consistent thread amongst experiencers of the UFO paradigm. One of their objectives is to challenge our perception of what is real… and what is sanity. It has forced our society to re-examine the definition of sanity.

Everything seems to have changed when RC’s best friend committed suicide. After hearing about his friend’s murder/suicide, RC came back to Seattle to attend his friend’s funeral services. RC reports that while visiting the place where the crime had occurred, he said that he had heard rapping and thumping on the walls of his deceased friend’s house. After attending his friend’s funeral, he took his son back to Texas. It was an opportunity to show him what life was like on the road. It was perhaps a once in a lifetime chance for his son to see America. It was around that time when RC’s experiences with the “critters” had resumed. But this time, the experience included his son. The reappearance of the critters seemed to have been triggered by his friend’s brutal murder/suicide because his encounters had resumed shortly thereafter.

Texas Encounter

While he and his son were asleep one morning, RC’s attention was drawn to something on the bed. He turned to look, and there it was, standing on his bed. When he saw it, the thing ran down to the end of

the bed and jumped off. It stood on his son's side of the bed, with its back turned towards them. As RC awoke, he could see that it was the same critter that he had experienced while in Des Moines, Washington. But this time it was wearing a dress, and it had shoulder-length hair. Its back was turned towards RC. From the son's vantage, he could only have seen what appeared to be a little girl from the back.

"Did your son remember any of this?" I asked.

RC replied, "I don't know. If he did, he has never talked about it nor mentioned anything to me."

What is ironic about this and other cases like it, is that these so-called extraterrestrials attach themselves to the UFO phenomenon by some parapsychic conveyance or by directly linking themselves to audio/visual UFO encounters. During my investigations into the UFO/paranormal connection, I propose three distinctly different types of UFO encounters. They are

- Entities encountered, which are a direct result of a UFO event, and
- Entities encountered that <u>are not</u> a direct result of a UFO event.

A fuzzy area between the two, where there may or may not be a UFO sighting directly related to a UFO event. Still, UFOs have been seen at some point during the contactee's lifetime.

False Memory Syndrome

Many people believe that the mind is like a tape recorder, recording every detail of our experiences. But this is not true at all. We are continuously updating and revising what lie within our neural memory banks. In *Alien Abductions: A Skeptical Inquiry*, Dr. Blackmore offers a glimpse into one possible explanation for the alien abduction phenomena.

> False memory syndrome is quite important to alien abductions, although I don't think that it plays a role in every

> case. People will have some kind of experience whether it's sleep paralysis, some hallucination or some odd experiences that they can't understand. And when they start to talk about it, and tell other people, they inevitably put words to [it]… the more your start to describe something, the more you remember your descriptions… That's what we mean by false memory. When you come to believe the details are all true. (**Dr. Susan Blackmore)**

Perhaps these extraterrestrials are not from outer space but rather from inner space. I certainly think that this is a distinct possibility. Who's to say that this is not the framework in which the proverbial extraterrestrial would operate? What rule says that they have to interact within our dimension and our reality in a conventional way? I don't dismiss the idea that a great deal of the abduction phenomenon can be explained by conventional science. Yet the phenomenon persists, and not all cases are easily dismissed. There are other factors at play, which would indicate that this is not just *mental aberration* but rather suggest an alternate reality.

> Maybe when we go into other states of consciousness, it's like we're turning the dial on the radio and we move into another station. Maybe we're moving to another level of the universe and we're picking up other traffic, other information. And then when we move out of that state of consciousness, you move back to the home signal into that which we call normal consciousness. (Paul Devereaux, ibid.)

RC has had MAPP experiences with his significant other, which I will identify with the name of Starr. For reasons of confidentiality, I often will assign an assumed name to all eyewitnesses in my case study files unless I receive permission to use their names.

Eyewitness: Starr, RC's girlfriend.

Background: Starr had been raised as a Christian and attended a fundamentalist Christian church named Grace Brethren Church. She is currently homeless, living with her significant other, RC. She would

not reveal her age, which is a woman's prerogative. Starr says that she has never experienced a UFO encounter. This is extremely significant, as I will reveal later in this chapter.

Her ex-boyfriend had engaged in satanic worship and had practiced witchcraft once after they had split up. She said, "He did it to try to get me to go back with him." I asked her, "He cast a love spell?" Her response was "He tried to." Starr believes that this added to her problem with demonic activity.

One observation that I have made regarding those who are plagued by demons is that there is a consistent thread that runs throughout these case studies. That is that there appears to be a direct link to the occult at some point in their lives.

She also informed me that she has personally witnessed telekinetic powers in her mother and other family members. She says that she has never experienced a UFO encounter.

She claims that she has seen entities and believes that they are demonic in origin. She has been experiencing encounters since early childhood and while attending church. She calls her experiences nightmares.

I asked her where these demons come to her.

She answered, "They are coming into my dreams to [traumatize] me. The only way I can get them to go away is to call or invoke the name of Jesus."

I asked her, "What are these nightmares about?"

She replied, "They are about all kinds of [things]. I always knew they were demons… *I know* they are. I *still* believe that."

I believe that they are demons and that they can be moved on out of our dreams and can be exorcised. RC has related an experience with me that she concurs with. After he had first met Starr, he was out on a date with her. He believes that a spirit or entity entered her and actually possessed her. He said, "She had superhuman strength. That for her was abnormal. She tried to hit me. I caught her fist before it connected. She spoke in a deep, guttural voice. It roared like a lion." After he had caught her fist, she collapsed into a weakened state.

> The basic texture of research consists of dreams into which threads of reasoning, measurements and calculations are woven. (Albert von Szent-Györgyi)

Leonard Stringfield wrote me a note on the title page of one of his publications. It is entitled “UFO Crash/Retrievals: Amassing the Evidence, Status Report III.” It says, “Hoping we can find the truth in this enigma someday.” And that’s really what the subject of UFOs is all about—a mystery wrapped in an enigma. Sir Arthur Conan Doyle put it this way: “When you have eliminated the impossible, whatever remains, however improbable, must be the truth.” But the truth makes for a strange bedfellow. For some, it is easier to stick it in the closet or sweep it under a rug. But I tell you—throw open that closet and pull back the rug. What has been hidden must not be concealed. For we are only fooling ourselves if we think we can ignore a phenomenon that demands our close attention! You can do *your* part by carefully examining the evidence I present. Then you must draw your own conclusions.

Since Starr and RC have bonded, they have experience MAPP encounters. These experiences sometimes dovetail nicely into each other, whereas at other times they do not. These encounters may be somewhat influenced by false memory syndrome as postulated by Dr. Blackmore. What relevance this may have to this particular MAPP case study is in question. After interviewing several witnesses and doing the investigative footwork, people that are close to RC have reported strange and unusual events associated with his presence.

Both Starr and RC are adamant about their MAPP encounters. It is their belief that they have mutual linked experiences. Their sincerity and individual testimonies offer a fresh look at what may be a new field of UFO investigation—a familial connection to the UFO paradigm.

Case in point: While the couple was in bed and asleep, they both awoke at the same time. Starr recounts that she had heard a noise that seemed unusual. There was movement in the room. RC awoke around the same time, but he was in a semiconscious state. I would have considered this a hypnogogic or hypnopompic hallucination had it not been for the fact that they both reported a similar event from

differing perspectives. When a person is partially awoken in a dream state of consciousness, they could have remnants of REM sleep, where the mind is actively dreaming. A loud noise in the room can often bring people to this quasiconscious state, which exists somewhere between fantasy and reality.

They both had reported that they were in a semiconscious state. Starr was unable to move anything but her head. Feeling a presence in the room, she opened her eyes and looked without moving her head so as not to tip off the intruder. After scanning the room for a presence, she turned her head to look at RC. “I thought he was dead,” she related to me. His body was very still and lifeless.

She was somewhat relieved when she heard him whisper something. He seemed to be attempting to speak and could barely make out that his lips were moving. RC could not move but was able to breathe the words “Help me… help… me… ” RC’s voice was very faint and barely audible. Starr said, “I felt totally helpless… I didn’t know what to do, but I knew something was wrong. I thought he was dying.” RC had said, “I was frozen,” meaning that he could not move. This state of consciousness is reportedly very frightening and is often reported by individuals having a terrifying experience. “I was bawling my eyes out,” she said. “I have only been this scared one other time in my life.”

That was when she saw the shadow people. She sensed motion to the front of the mobile home. She miraculously was able to turn her head enough to see two people sitting in the front seat of the recreational vehicle. But they were black silhouettes. These figures didn’t appear to be real people. They were talking in a strange language. From the way Starr described it, their communications sounded like a phonograph record playing very fast. Taking the opportunity to check her sincerity, I asked her a leading question. She disagreed with my suggestion and said, “It sounded like a foreign language.” It was clear that she could not make out what they were saying to each other. One of the men in black was manipulating something on his lap while the other monitored the situation.

“I tried to grab the gun, but I couldn’t move my arm,” she said. “That really scared me.” She was forced to experience the encounter from a

frozen state. Unable to move, she broke down emotionally as the man she loved was being subjected to some as yet unknown horror. “I was bawling my eyes out,” she said.

From RC’s perspective, he was experiencing pure horror. Entrapped in a pill-shaped capsule, he felt himself metering to hell. The feeling was like falling, and he wanted to escape this nightmare that was happening in vivid color. “YOU CHOSE!” the voice said as he continued to plummet downward. “You chose!” was repeated several times. He knew he was going to die! What was more, he had to get back to Starr. He said again, “I promised her that I would come to see her one last time before I died.” He tried to scream, but the words would not come out. *So he screamed in his mind!*

RC eventually pulled out of his vision, but not before it left a lasting and permanent impression on him. He later told me in an interview with him and Starr that “YOU CHOSE!” referred to some bad habits that he had that God had wanted him to change. Many would say that he is in contact with demons—not angels, but rather messengers of deception. He collects a disability check because he cannot cope with the real world he lives in. But then again, what is real? This is the first case that I know of where someone is actually collecting a disability because of his or her contact with otherworldly beings.

Besides RC’s brother having seen UFOs, his mother has seen them also. These include contact with the UFO occupants.

“I see the same creatures that [my] mom did,” RC said.

I asked him if she had ever described them to him.

“She saw the same critters that I did” was his reply. “I used to hear her crying in the bathroom for hours and hours.”

I asked him, “Why did she do that?”

RC answered, “She was so scared to go into her bedroom by herself, that she’d hide in the bathroom for hours and hours… sometimes all night.”

I would have to ask how much security could a locked bathroom door afford someone when these apparitions can defy any proverbial barrier.

After a night of interviews and discussion about UFOs and extraterrestrial “critters,” RC took me aside and confided in me. “I want

to hurt these things because they had hurt my mom." Whether real or imagined, it sounded like they were hurting him and his girlfriend also.

UFOs and the Psychological Paradigm

Carl Jung presented an interesting perspective on the UFO phenomenon. Their significance as an aspect of our collective subconscious cannot be ignored. The father of the psychological aspect of this phenomenon presents some startling revelations about man's association with the UFO and the inner workings of his mind.

> These rumors, or the possible physical existence of such objects, seem to me so significant that I feel myself compelled, as once before when events were brewing of fateful consequence for Europe, to sound a note of warning. I know that, just as before my voice is much too weak to reach the ear of the multitude. It is not presumption that drives me, but my conscience as a psychiatrist that bids me fulfil my duty and prepare those few who will hear me for coming events which are in accord with the end of an era. (Carl G. Jung, *Flying Saucers* page 15)

There is a lot of truth in what he's saying. He was completely aware that the phenomenon existed. He leaves me with the impression that the UFO phenomenon exists as a projection of our collective psyche. The appearance of UFOs is significant throughout history, and heralds major changes in the world arena. In ancient history (Egypt), as in other major cultures that existed throughout the historical record, Jung is quick to point out that the appearance of the UFO is just as significant today as it was then.

Flying Saucers was written before Jung's death on June 6, 1961. This was a time when the UFO phenomenon was well established in the public eye. And Jung was well aware of the significance of its appearance. As we approach the new millennium, the year AD 2000 marks a major turn on the centennial calendar. It has been a thousand years since the last millennial turnover, and the appearance of the

UFO phenomenon around the turn of the century marks the last one hundred years of this one.

It began with the great air ship mystery prior to the twentieth century, a time when dozens of “airships” were seen throughout America. The alleged appearance of the Virgin Mary in Portugal (1915–1917), which was accompanied by UFO sightings. “It was, in fact a luminous globe and, according to the assertions of those who saw it, oval in form with ‘the widest part underneath—a sort of celestial airplane.’” There had been prophetic admonishments via this UFO also, as any serious researcher could tell you. They are more *warnings* than they are predictions to include what *may* happen if humanity does not wake up and change the course it’s on. Here is Kevin McClure’s account of what seventy thousand people witnessed on 13 October 1917.

> It looked like a plaque of dull silver and it was possible to look at it without the least discomfort. It might have been an eclipse, which was taking place. But at that moment a great shout went up and one could hear the spectators nearest at hand shouting, “A miracle! A miracle!” (Kevin McClure)

In the *Journal of Natural Health and Parapsychology*, I wrote an article entitled “UFOs Tales from the Ether.” In it, I documented the encounters with a woman who claimed to be the Virgin Mary. She told the contactees that she would perform a miracle so that all would believe the prophetic warnings that the lady gave the children at the Cova De Iria. Whoever these occupants of the UFO are, they want us to believe in what they are trying to say to us. They have been trying to do this for the past century. Despite the problems that the children may have had understanding what the apparitions were telling them, the warnings were always the same. Pray or God is going to “punish” the world for its sins (JNHP, September/October 1983).

I believe that this is significant. In “Warnings and Anachronisms,” John Keel documents some of these predictions. One of them accompanied the great New England blackout in the ’60s (mentioned earlier in the book). *Angel* means “messenger” in both the Greek and

Hebrew text, and the association between them and the UFO phenomenon paints a stark reality of the UFOs interaction with civilization throughout history.

Such an object provokes, like nothing else, conscious and unconscious fantasies, the former giving rise to speculative conjectures and pure fabrications, and the latter supplying the mythological background inseparable from the provocative observations. Thus there arose a situation in which, with the best will in the world, one often did now know and could not discover whether a primary perception was followed by a phantasm or whether, conversely, a primary fantasy originating in the unconscious invaded the conscious mind with illusions and visions (C. G. Jung, ibid., page 17).

The UFO phenomenon would suggests that we are more than a sum of our parts, a piece of a greater whole. Attempts by the Condon project to dissuade the public to the reality of the UFO phenomenon did not work, and the UFO phenomenon persists to this day. Now more than ever, the greater majority of the world believes that UFOs are a real phenomenon. Perhaps the UFO phenomenon is here to remind us that we are more than human animals, that there's more to life than living and dying; to remind us that there is more to life than just trying to make it through the day.

All we have to do is turn on the television to see what kind of world we live in today. It's all over the newspapers and it is flooding our newsstands. Bad news and a lot of it—it can be overwhelming. No one has heeded the warnings of the UFO occupants, and look where we're at today! Although I cannot prove this association because of the ethereal nature of the UFO phenomenon, it is certainly worthy of *serious* consideration. I am here to tell you that, and given the fact that we are about to enter a new millennium, I hope you are listening.

The UFO accompanies and "brings about long-lasting transformations of the human psyche," says Jung. These revelations have left an indelible mark throughout human history and left permanent traces of it in its wake. Jung says that "reflections such as these" are extremely "unpopular." He was willing to place his "hard-won reputation for truthfulness, trustworthiness, and scientific

judgment in jeopardy." I believe that he risked it all for the sake of the common good. And his words are worth repeating at this, the advent of the new millennium. I applaud you, Mr. Jung.

> This transformation started within the historical tradition and left traces behind it, first in the transition from the age of Taurus to that of Aries, and then from Aries to Pisces, whose beginning coincides with the rise of Christianity. We are now nearing that great change which may be expected when the spring-point enters Aquarius. It would be frivolous of me to conceal from the reader, that reflections such as these are not only exceedingly unpopular but come perilously close to those turbid fantasies which becloud the minds of world-improvers and other interpreters of "signs and portents." (Carl G. Jung)

The words of RC still ring in my ears. While we were discussing the nature of the voice during his contacts, he said, "He is God, I know he is." He honestly believes this with all seriousness and conviction. Starr and RC impressed upon me their belief that they are here to show people a better way and a clearer understanding of our relationship to a greater and higher power, which I call the God force. Whoever or whatever this phenomenon represents, it is a clear and present force within out world today.

Carl Jung summed it up very well when he expounded upon the reality of an *unknown* reality. Could this represent the yin to our yang, the negative to the positive, or the dark to the light? You must have darkness to perceive the light.

Perhaps this is what the greatest philosophers have been trying to tell us throughout history? That there is more to life than meets the eye, if you will.

> For a decade the physical reality of UFOs remained a very problematical matter, which was not decided one way or the other with the necessary clarity, despite the mass of observational material that had accumulated in the meantime. The longer the uncertainty lasted, the greater

> became the probability that this obviously complicated phenomenon had an extremely important psychic component as well as a possible physical basis. This is not surprising, in that we are dealing with an ostensibly physical phenomenon distinguished on one hand by its frequent appearances and on the other by its strange, unknown and indeed contradictory nature. (Jung, ibid.)

What then are the occupants of the UFOs trying to tell us? There have been numerous cases where people claiming to have a revelation from them have made predictions and have been wrong time and time again. How can we discern the meaning in all this madness? Perhaps the ancient Egyptians can offer us some clues as to what this all may mean.

There is a consensus amongst Egyptologists as to the decipherment of one particular hieroglyphic panel in this tomb of Horemheb, who ruled Egypt from 1319 to 1292 BC. The panel translated shows how Pharaoh Heremheb makes an offering of wine to Osiris, the god of the afterlife. Otherwise, Egyptians believed that the sun would not shine, the moon would not rise and chaos would reign." (Kent R. Weeks, *National Geographic*, page 2).

Have we strayed too far from our primal, ancestral origins? I believe that we have. The UFO phenomenon has a place in our world today regardless of whether or not we are willing to accept that. Whether real or imagined, the UFO remains a constant reminder of where we stand in the grand scheme of things. We as a people must realize this is the case and make the necessary changes in the course we're on *before* it's too late. I believe that the UFO represents man's need to return to his spiritual roots. And so we shall, as we have before and will return today, whether or not we are willing to accept it. The search for extraterrestrial intelligence is looking for signals from outer space. The communications may very well be coming from within each and every one of us… from *inner* space.

Appendix I

Appendix I: UFO Report Form

Date and time of sighting:
Place of sighting:
State/province:
City/town:

Draw a simple sketch of the object on the last page of this form. Label any lights, color, protrusions, etc.

On a separate piece of paper, please sketch a simple map of the area, showing your position and the object's position. Include an arrow denoting the direction of north. Indicate direction the object was moving.

Your Personal Account

Please describe the incident as it happened. Be sure that your narrative includes the following:

1. Where were you, and what you were doing at the time?
2. How did you lose sight of the object?
3. What did you think the object was when you first noticed it?
4. Describe the object and its actions.
5. What made you first notice the object?

Sighting time: _____ p.m. () a.m. () Time zone: _____
Duration: _____ seconds () minutes () hours ()
Date of sighting: (day) _____ (month) _____ (year) _____

Environmental Situation

Check or fill in the following as applicable:

- Viewed from outdoors () indoors () car () aircraft () boat () other _____

- Viewed through glasses () window () screen () binoculars () telescope () still camera () movie camera () theodolite () radar () other _____
- Area (location): city () suburban () rural () industrial () commercial () residential ()
- Area (terrain): fields () woods () hills () mountains () river () pond () lake ()
- Area (technical): airport () power lines () power station () railroad tracks () other _____
- UFO elevation:
    - First seen ¼ () ½ () ¾ () of the way () overhead () other _____
    - Last seen ¼ () ½ () ¾ () of the way up horizon () overhead () other _____
- UFO distance when closest to me: _____
- UFO altitude when closest to the ground: _____
- UFO passed
    - in front of _____, which was _____ in distance from the witness.
    - behind _____, which was _____ in distance from the witness.
- Also in area: airplane () helicopter () balloon () searchlight () overhead () other _____
- Last seen ¼ () ½ () ¾ () of the way up () horizon overhead () other _____
- UFO distance when closest to me: _____
- UFO altitude when closest to the ground: _____
- UFO passed
    - in front of _____, which was _____ in distance from the witness.
    - behind _____, which was _____ in distance from the witness.
- Also in area: airplane () helicopter () balloon () searchlight () other _____
- After UFO sighting ()
    - Sky condition: clear () partly cloudy () overcast ()

foggy () heavy () medium () light ()
    - Precipitation: none () rain () fog () sleet () snow () heavy () medium () light ()
- UFO direction:
    - First seen in _____
    - Last seen in _____
- It moved from _____ to _____
- UFO elevation:
    - First seen ¼ () ½ () ¾ () of the way up horizon () overhead () other _____
    - Last seen ¼ () ½ () ¾ () of the way up the horizon () overhead () other _____, which was _____ in distance from _____
- Apparent size:
    - Many times larger () smaller () if put in the sky beside object below
    - _____ times the size of a star
    - _____ times the size of a full moon
- Bright as a star () the moon () or a _____ light if placed at the same distance away

Object Description

Check or fill in the following as applicable:

- Observed
  - an object ()
    - number: _____
    - shape: _____
    - color(s): _____
  - a light ()
    - number: _____
    - shape: _____
    - color(s): _____
- Describe
  - sound: _____
  - smell: _____
  - speed: _____
- Real size:
  - Larger ()
  - Smaller ()
  - Same size () as the object listed below:
    - basketball ()
    - compact car ()
    - standard car ()
    - house ()
    - other _____
- Apparent size:
  - Many times larger () smaller () if put in the sky beside object below
  - _____ times the size of a star
  - _____ times the size of a full moon
- Bright as: a star () the moon () or a _____ light if placed at the same distance away
- Did the object(s) or lights(s) (please elaborate on items checked below by using a separate sheet of paper)

    - change direction () hover () affect radio () flutter ()?
    - turn abruptly () descend () affect magnetism () blink ()?
    - absorb objects () hover over power lines () affect timepiece(s) ()?
    - o pulsate () eject objects () hover over buildings? () affect engine ()?
    - appear solid? () change shape () land on the ground ()?
    - affect vehicle () have fuzzy edges () cast shadow ()?
    - land on water () affect the animal () have outline ()?
    - cast light () carry occupants () affect human ()?
    - wobble () reflect light () communicate ()?
    - affect water () vibrate () leave a trail ()?
    - give off heat () affect ground () glow () disintegrate ()?
    - leave residue () affect vegetation () appear transparent? ()?
- How many witnesses? _____
- Did any other agency contact you? _____

Signature of observer_____
You may () may not () use my name.
Date this form signed _____ (day month year)
For office use only.
File case no. ():// _____
Case No._____
Follow-Up: TC () _____ film () _____ on-site () _____
Draw a simple sketch of the object:

About the Author

Christopher Montgomery is an author who lives in the greater Seattle area during the winter and in Boston, Massachusetts, in the summer. His writing career goes back to 1983 when he was a journalist for an organization named the Canadian Society of Geo-biology and Bio-magnetism. His articles “Tales from the Ether” were published in The Journal of Natural Health and Parapsychology. He later published a white paper entitled Pyramid Energy: Power of the Future. He has written for several magazines, including uncensored UFO report /UFO files for the Goodman Media Group out of New York. He has also worked for the Sy-Fy channel (http://www.syfy.com) and USA Networks in a video project headed by Steven Spielberg (Taken). Montgomery has appeared in several documentaries dealing with the subject of alien encounters and UFOs in the Bible, including UFOs: What You Didn’t Know (a Weller/Grossman production). He has completed a college level course and is a certified private investigator. Montgomery continues to investigate UFO reports. He is currently writing a book entitled “The Tower of Babel,” which he hopes to release by the year 2020.
